Gemini Life Core PAS User Guide

Gemini Overview

Summarize page

The Position of Gemini in the InsureMO Eco-System

Gemini, powered by InsureMO, is an internal project code for the latest version of the InsureMO Life Insurance APP.

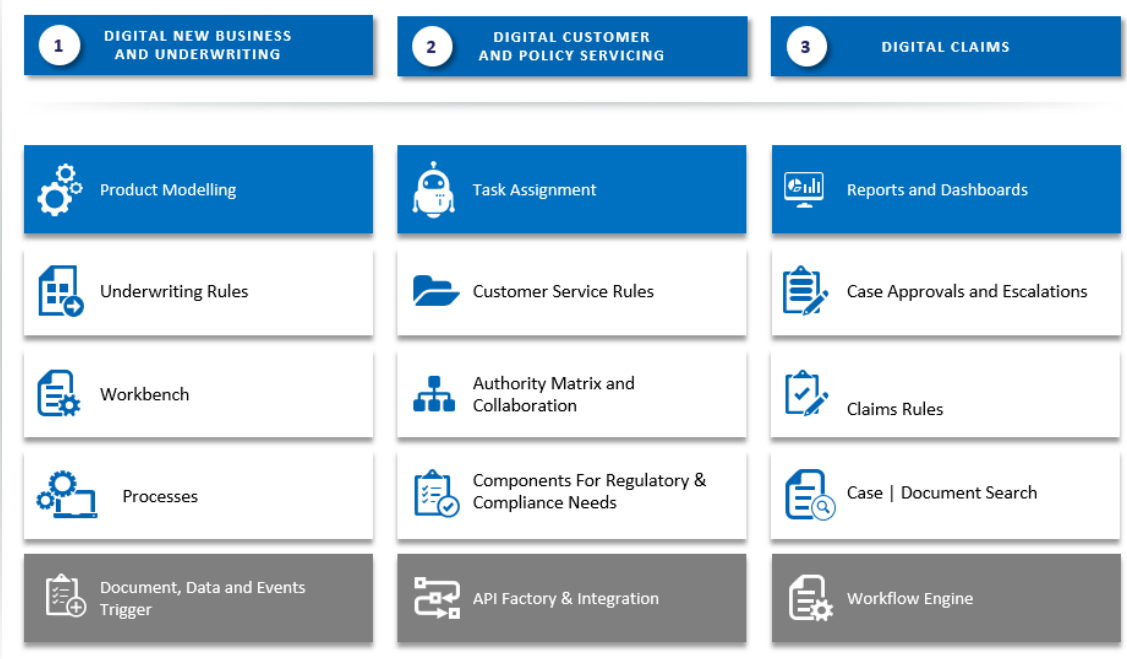

The System Features of Life Insurance APPs

- **Reducing Human Intervention**

Digital Life Systems for insurance operations are strategically implemented based on the 'right fit' technology levers required to solve the business challenges. The solution, powered by InsureMO Product Factory and integrated third-party engines, aims to optimize and automate processes. This approach continuously reduces human intervention, enhances STP rates, and minimizes errors.

- **Powering Human Intervention**

Digital Life Systems have been designed to streamline operations for end-to-end policy life cycles, from New Business to Claims/Maturity. This comprehensive system includes Product Factory, API Factory, Underwriting Rules, and Claims Rules. Digital Life Systems facilitate collaboration and help manage the insurance journey, helping users focus on productivity. With illustrative and real-time reports, managers can also manage their teams.

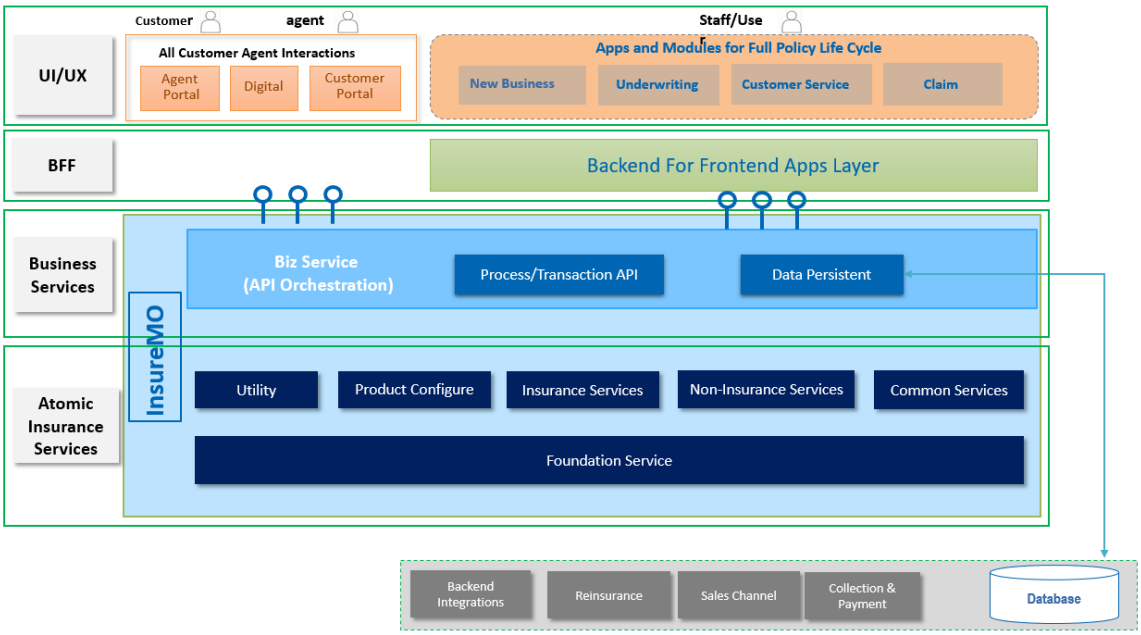

Technical View for Gemini

Introduction to Gemini's technical features.

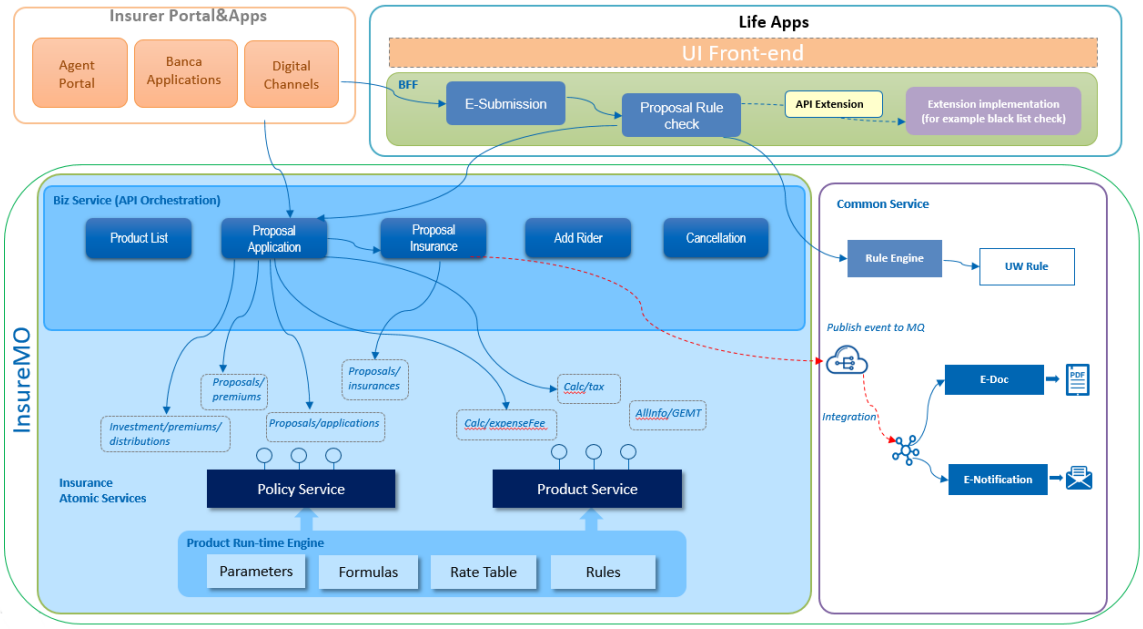

InsureMO Microservices-based Architecture — Introduction to Layers

The following introduces InsureMO Microservices-based Architecture, with Gemini concentrating on UI, BFF, and BS layers.

API Flow between BFF, BS, and Atomic Insurance Services

- **The InsureMO platform is designed with multiple-layer abstraction and its foundation is InsureMO microservices, which are atomic APIs provided by the product run-time engine.**
- **The Business service layer plays the role of service orchestration, which assembles microservices (aka. Building blocks) into process APIs for external consumers.**
- **By taking E-Submission as an example, the following illustrates the API call chain from the UI layer to the policy and product microservice layer.**

Key Technical Characters of Life Applications

- **Meta Data Driven**
  - **A modeling framework based on a data dictionary and insurance practice accumulation.**
  - **Allows users to reuse existing business models or create and revise business models without direct interaction with physical tables.**
  - **Makes service common and independent.**
- **Rainbow UI**
  - **Internet-level user experiences through HTML5/React JS/Bootstrap.**

    - **Supports various devices and resolutions.**
    - **Components development with a low learning cost.**
- **Workflow**
    - **Streamlines business processes with workflow engine support.**
    - **Rules-based logic to automate business processes and reduce or eliminate time-consuming tasks.**
- **Flexibility**
    - **Allows users to build and organize their business services based on atomic services.**
    - **Allows users to customize atomic service pre- and post-execution via DSL.**
    - **Allows users to define different processes for various business scenarios via DSL.**
- **Containerization Architecture**
    - **Implements a microservice architecture, and the entire system is separated into smaller microservices for ease of maintainability and scalability.**
    - **Adopts the containerization technology to make it agnostic to any programming languages and hosting environments.**

Business View for Gemini

Introduction to Gemini's Business features.

New Business Workbench's Design Highlights

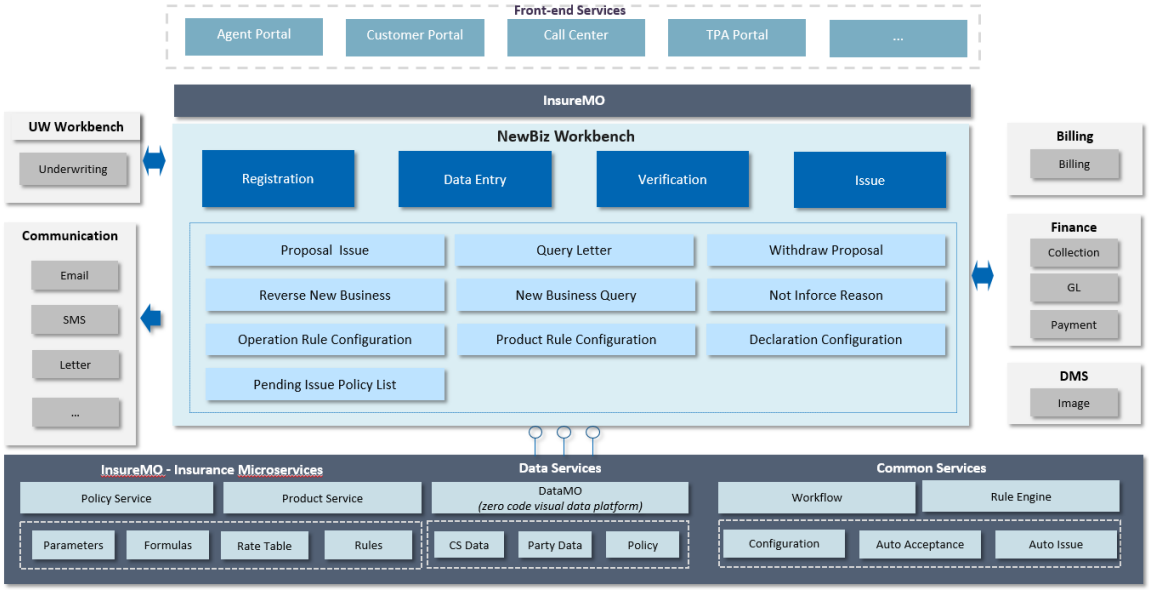

New Business

The New Business workbench is an efficient platform to deliver the proposal to underwriting or issuance departments. As a front-end application, it covers various product lines and collaborates with multiple parts. Its scalability facilitates work with agent or customer portals and response in real-time.

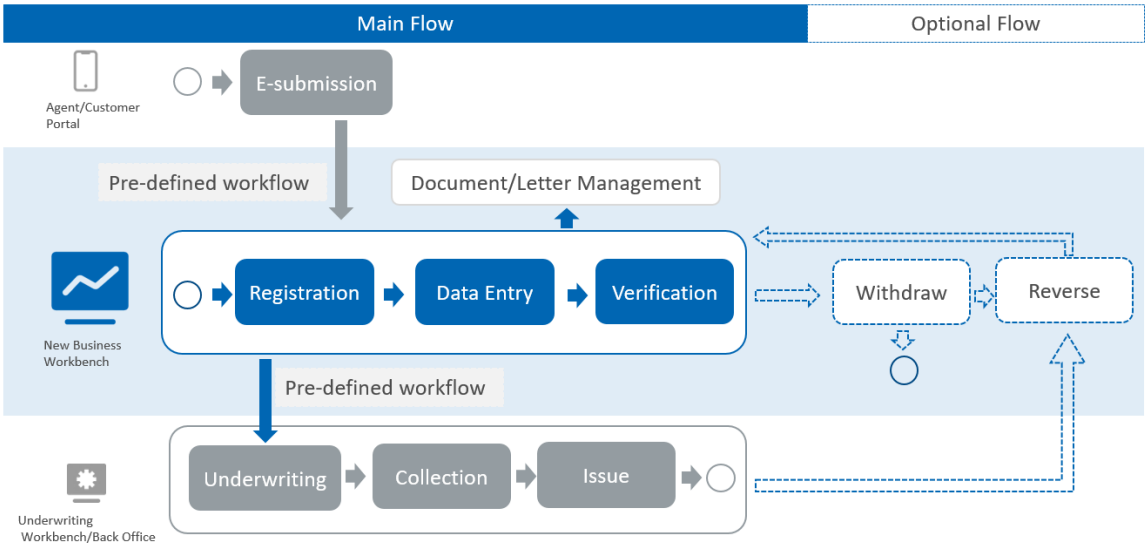

- **Easy Operation**
    - **Streamlined proposal entry;**

        - **Practical operation behaviors;**
        - **Operation navigation;**
        - **Instant feedback.**
    - **Rich Configuration**
        - **Health declaration;**
        - **Waiver for the whole policy;**
        - **Default rider term automatically;**
        - **Improved rule engine.**
    - **Typical Business Offerings**
        - **Master policy;**
        - **Regular rider attached to single main products;**
        - **Optional liability;**
        - **Family product.**
    - **Comprehensive Data Inputting**
        - **Multiple roles of policy Data input;**
        - **Product templates that vary by product category;**
        - **Comments input in different processes.**

New Business Overview

Process of New Business

Underwriting Workbench's Design Highlights

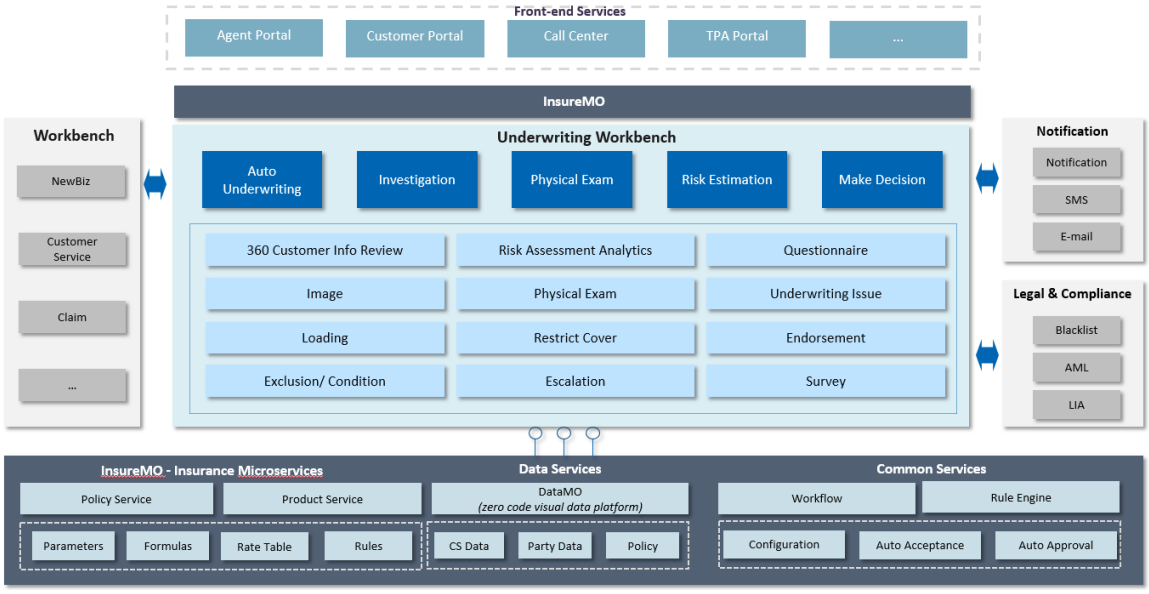

Underwriting

The new underwriting workbenches collaborate with multiple applications and microservices such as NB, CS, and Claim to deliver the transaction in a fast and efficient way. These workbenches operate with a high degree of autonomy, possess scalable capability, and work seamlessly with portals and backend systems.

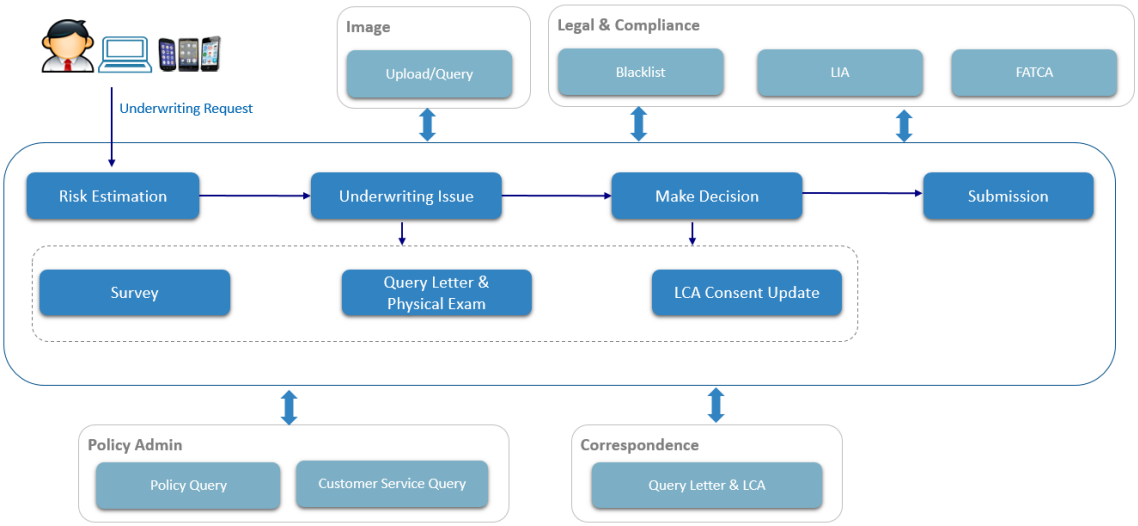

- **Easy Operation**

    - **Centralized underwriting platform;**
    - **Practical operation behaviors;**
    - **Quickly respond for the next operation.**
- **Flexible Task Flow**
    - **Workflow configuration;**
    - **Issue and document follow-up;**
    - **Task auto escalation by authority applied.**
- **Comprehensive Data Visit**
    - **No dead angle of risk review;**
    - **a 360-degree view of policy historical info;**
    - **a 360-degree view of customer info.**
- **Powerful Risk Estimation**
    - **Issue raises based on risk rules configuration;**
    - **Requests for medical checks and surveys;**
    - **Follow-up on documents and LCA.**

Underwriting Overview

Process of Underwriting

Customer Service (Policy Alternation) Workbench's Design Highlights

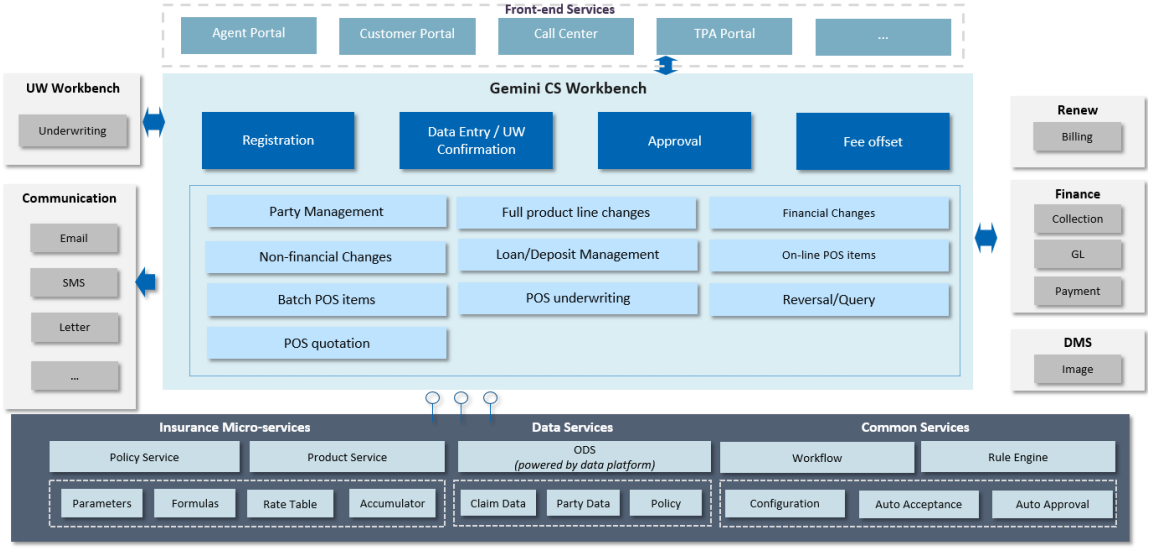

Customer Service

The new CS workbench is an up-to-date life insurance policy service management system, which provides all-round and stable functions for insurers to maintain their daily policy services. It is easily scalable and can collaborate seamlessly with the backend system.

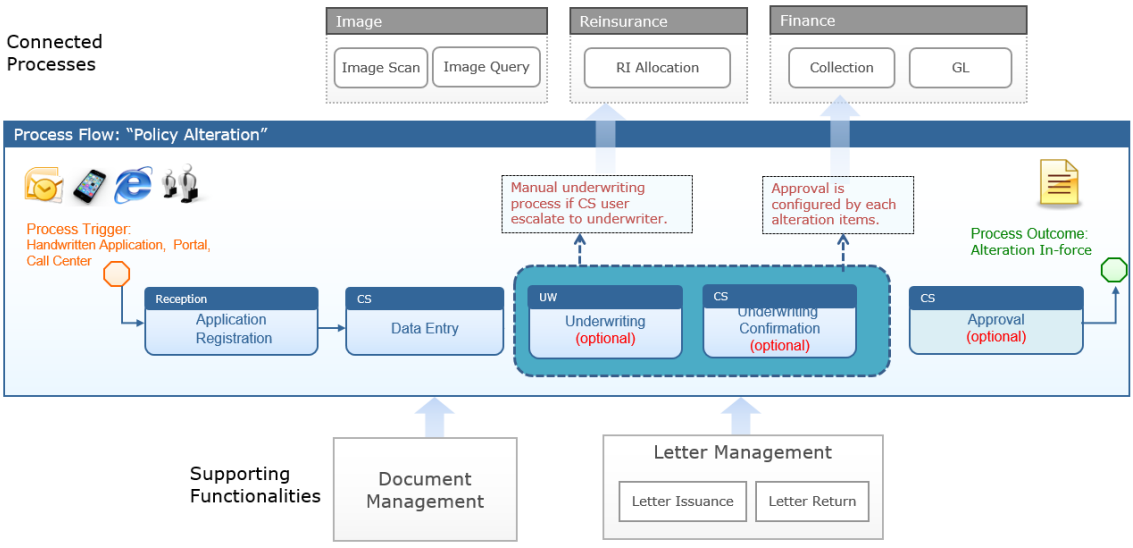

- **Rule Engine\Workflow**
  - **Auto-UW rules for CS;**
  - **Auto-UW confirmation;**
  - **Auto approval rules;**
  - **Configurable Workflow.**
- **Easy Operation**
  - **Enhanced party management;**
  - **CS query.**
- **All-round Function**
  - **CS UW extra loading;**
  - **Incorporate payment;**
  - **E-Submission.**

- **Other Improvements**
    - **Reinstate RPU and ETA,;**
    - **Rescind policy CS;**
    - **CS quotation;**
    - **Auto deposit and loan settlement.**

Customer Service Overview

Process of Customer Service

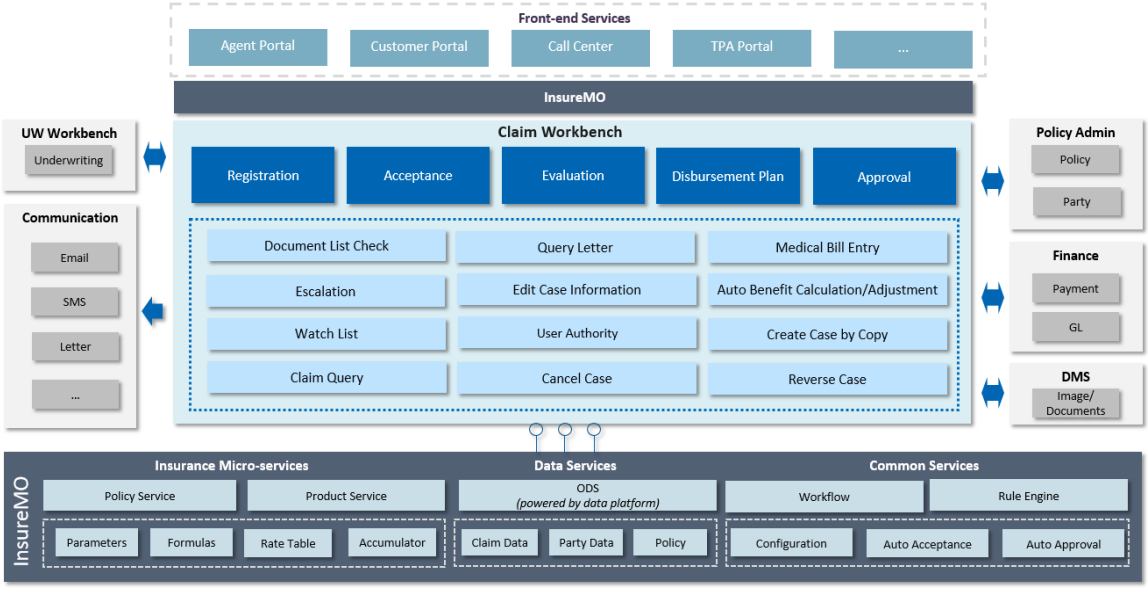

Claim Workbench's Design Highlights

Claim

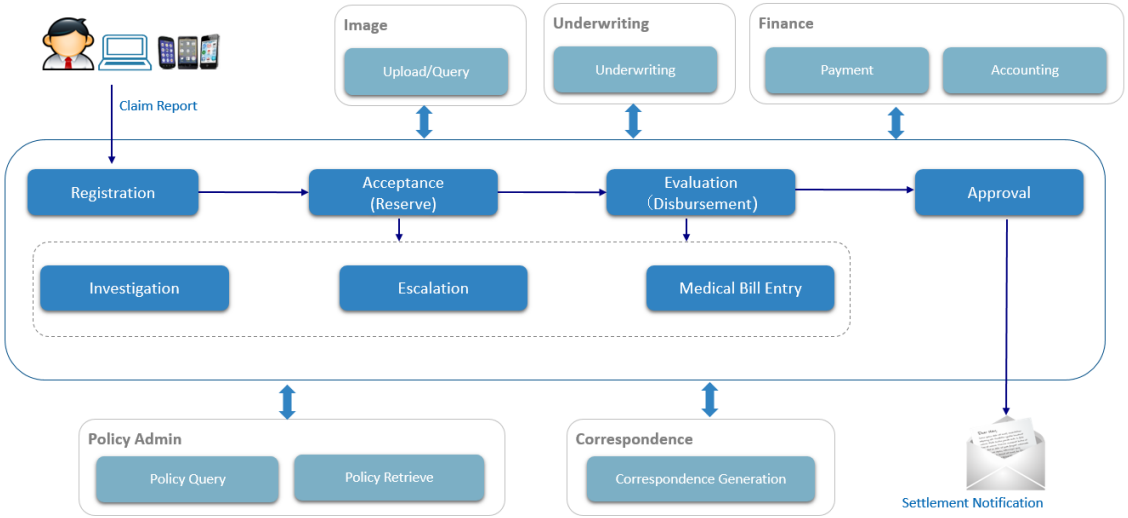

The Claim workbench is a digital platform with high agility and scalability, which covers various claim businesses for all product lines. It easily enables both front-end and back-end systems involved in pre-claim, claim, and after-claim processes.

- **Business Orientated**
  - **Pre-defined Workflows;**
  - **Incidence-based and customer-centric claim structure.**
- **Auto Calculation**
  - **Claim benefits auto calculation and accumulation;**
  - **Limitations.**
- **Services Based**
  - **Powerful microservices architecture;**
  - **API-based to communicate with various parties.**
- **Configurability**
  - **Visible and configurable business rules and workflows.**

Gemini Internal Service Orchestration Guide

Summarize page

Background and Idea

In many cases, pre-built business logic is unable to adapt to regional changes. To avoid the risk of logic modification, APIs can be reorganized in a new layer, and typically, it is called backend for frontend (BFF). Sometimes, for those uncomplicated situations, it can be covered by mature third-party products or technologies, such as middleware KrakenD, Kong, or GraphQL server Apollo, GraphQL.js, or something else. Through these technologies, products and even

specially built BFF systems, we can achieve the purpose of modifying, rebuilding and even adding appropriate logic to adapt to specific requirements.

tip

BFF, as the most commonly used design pattern, is very effective.

Even though we have so many ways, it's easy to find that none of the above can modify the internal logic of pre-built API. In other words, we can't modify any existing logic. If there is any subtle difference, the only way is to rewrite a piece of logic in BFF. It could be argued that reorganizing works here as well, but one key problem cannot be avoided, how to maintain database transaction correctly.

We all know that database transaction can only be performed on a single JVM. Even with mature standard solutions such as TCC, Eventual consistency, or other distributed transaction management solution, to maintain it through multiple JVMs is very complex. To say the least, even apart from these complexities, the common premise for all distributed transaction solutions is that each system in this eco-system must follow and implement the same standards, which is mission impossible in the real world.

Under such a premise, the only solution left that does not require a global unified scheme is eventual consistency. It requires at least a compensation mechanism and idempotent API design, yet not very friendly and easy.

Perhaps we will not encounter such stringent requirements, but there is no denying that the problem exists.

Now, this is the problem that must be faced head-on, and there must be a way to modify the existing logic. In the past, there were 2 ways. One was changing the built-in parameters, and the other was modifying source code itself. Let's look at the pros and cons of both approaches.

- **Built-in parameters: Obviously it is perfect. The only problem is that baseline cannot anticipate every changing demand in time, which means there is no built-in parameters available in many cases.**
- **Modifying source code: It has the highest level of control, and everything can be done in this way. The disadvantage is also obvious, which is hard to perform version upgrade, even it's a patch upgrade.**

The above ways have always been available, but we still need the 3rd way that is able to modify existing logic without changing any source code. So we built the Internal Service Orchestration module, to handle such requirements.

A Real Story

Glossary

Before getting into the real story, let's familiarize ourselves with following new terms.

- **Garment: entrypoint of internal service. Programmatically, is a Java method.**
- **Fabric: atomic internal service. Programmatically, is a Java method as well.**
- **Context: context of Garment execution, thread-safe.**
- **Step: every Garment is orchestrated by series of steps. There are several kinds of step:**
    - **Entrypoint Step: Garment itself, accepts parameters from invoker.**
    - **Fabric Step: A step call a Fabric, which**
        - **Consumes parameters from context,**
        - **Produces result to context, which is optional.**
    - **Route Step: A step with**
        - **Several Routes: each one has its prerequisite check and a next step if passed the check,**
        - **Default Route: will be executed when there is no route matched,**
        - **Join Step: next step of route step, always be executed no matter what route is selected.**
    - **Groovy Step: similar with Fabric, but base on a groovy snippet rather than Java method. It's kind of efficient and flexible glue that tie the steps, makes up for the problem that some new logics cannot be implemented by using existing logics.**

    - **Pick and Return Step: pick an object from processing context and returns to client.**
- **Orchestration: to weave the steps of Garment by Fabrics.**

Garment can be a Fabric as well, which means nested weaving is available.

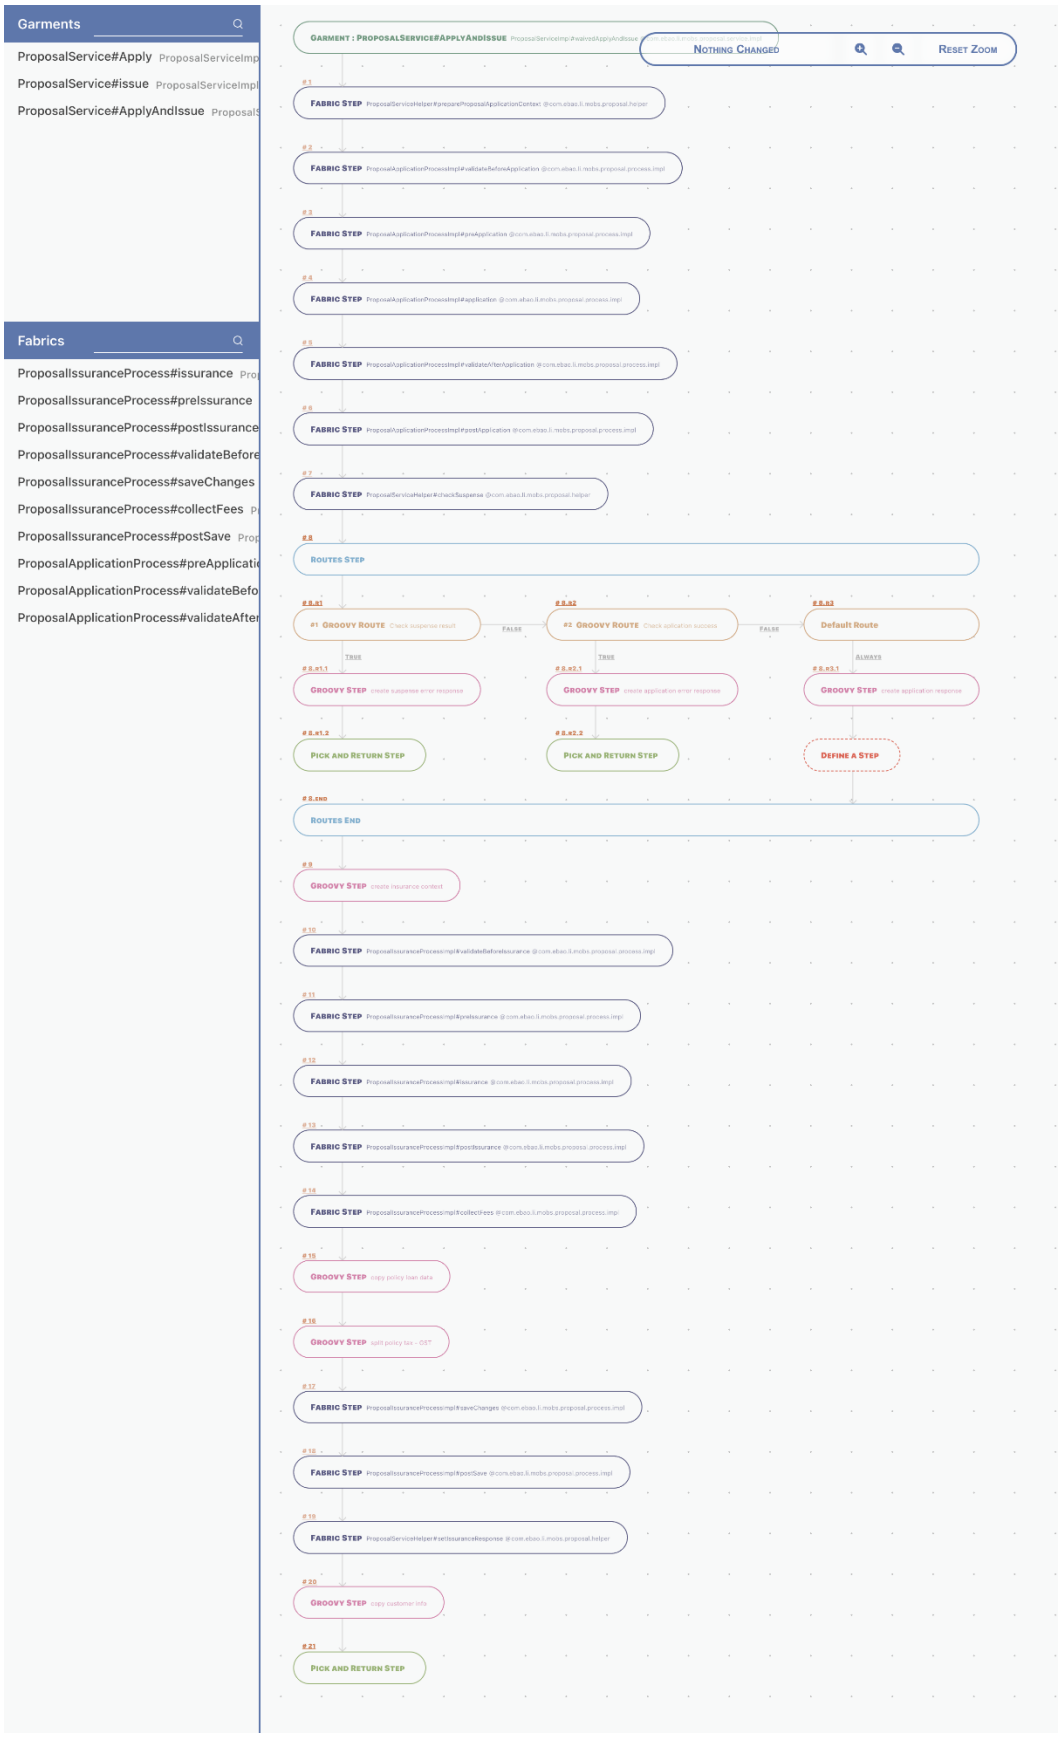

Tenant Oriented

Orchestration is tenant oriented. The baseline implementation is executed when there are no matches of current tenant in context. In other words, if there isn't any custom orchestration, the baseline logic is executed with emphasis. That is, the logic of current tenant is the same as baseline exactly.

Isolation

Because Garment and Fabric are both Java method based, so isolation for Internal Service Orchestration is on micro-service level.

Apply and Issue Policy, From A Tenant

Garments
ProposalService#Apply
ProposalService#issue
ProposalService#ApplyAndIssue
Fabrics
ProposalIssuranceProcess#issurance
ProposalIssuranceProcess#preIssurance
ProposalIssuranceProcess#postIssurance
ProposalIssuranceProcess#validateBefore

GROOVY STEP
PICK AND RETURN STEP
DEFINE A STEP
ROUTES END

Steps in above diagram:

1. **Build context of quotation application by request (Garment).**
2. **Pre-validation for submitted data, both on data format and business rules.**
3. **Prepare necessary data for application processing.**
4. **Do quotation application processing, main logic applied here.**
5. **Post-validation for processed data, business rules only.**
6. **Application event broadcast.**
7. **Check suspense status of this quotation.**
8. **Routes according to suspense check result.**

- **Check suspense successfully or not, do following sub steps if failed,**
    - **Create failure response, copy error details into response,**
    - **Pick response from context and return to client.**
- **Check application successfully or not, do following sub steps if failed,**
    - **Create failure response, copy error details into response,**
    - **Pick response from context and return to client.**
- **Default route, performed when suspense and application check successfully**
    - **Create response, put into context.**

9. **Build context of policy issue processing according to result of application.**
10. **Pre-validation for insurance, both on data format and business rules.**
11. **Prepare necessary data for insurance processing,.**
12. **Do insurance processing, main logic applied here.**
13. **Insurance event broadcast.**
14. **Collecting fees.**
15. **Update policy loan details.**

16. **Processing GST.**

- **THIS STEP IS ADDED FOR AFLI TENANT,**

17. **Save updated data.**
18. **Save event broadcast.**
19. **Put necessary data into response.**
20. **Put customer details into response.**
21. **Pick response from context and return to client.**

How to Do Customization

Do Orchestration Only

It's very simple to do orchestration, just follow the steps below,

1. **Open orchestration configuration page.**
2. **Find Garment which need to be orchestrated, click to open it.**
3. **Orchestrate what you want.**
4. **Save and test it.**

Add My Implementations

Typically, orchestration can do anything you want, but there are still some scenarios where we would like to add our own implementation, such as declaring new Garment or Fabric. Simply follow the multilayered structure of Gemini, write your own Java methods in proper location, and use annotations as below to declare them as Garment or Fabric.

tip

Feel free to check out more annotations on InsureMO OSS of Sloth Backend Documentation.

More

Internal Service Orchestration is an independent project which is designed not just for Gemini. It can be plugged & played any module which is based on Spring Boot.

Gemini Architecture Overview

Introduction

This document aims to help developers understand the structure of Gemini and help them design and develop system features.

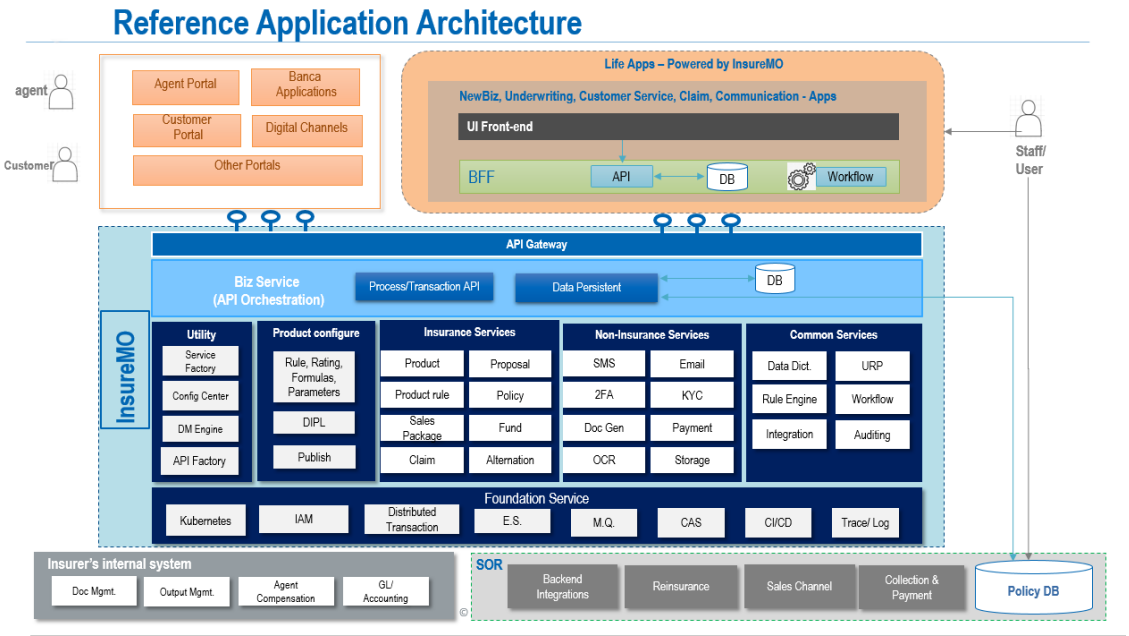

Intended Audiences

The intended audiences of this document are:

- **Developers**
- **System Administrators**

Overview of Gemini Architecture

Gemini provides microservice-based applications for life insurance and is currently undergoing further evolution.

1. Multiple Service Layers

1. **Life Apps Layer**
   The life apps layer provides UI and basic APIs for life apps, which operate independently.
2. **Business Service (BS) Layer**
   BS layer provides business process APIs. Until now, Gemini has provided the following two BSs:

- **PA BS——PA BS provides Transaction APIs for policy admin, party, BCP, and GL.**
- **Claim BS——Claim BS provides Transaction APIs for claims.**

3. **InsureMO Service Layer**
   InsureMo service layer provides:
   - **insurance services such as product calculation service, configuration service, and formula engine.**
   - **non-insurance services based on InsureMO.**

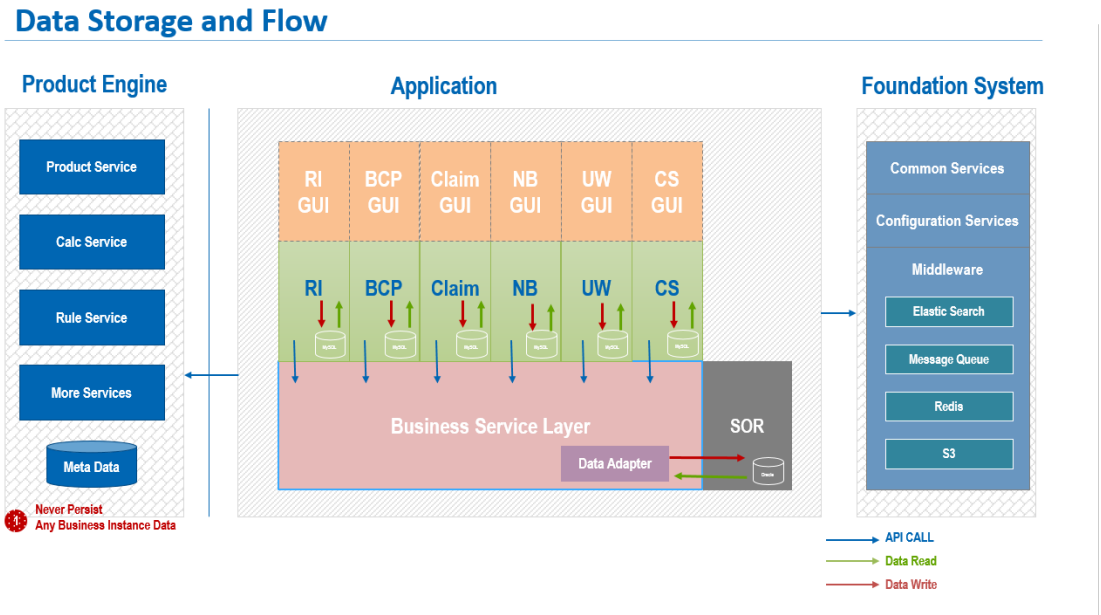

2. Application Framework

Separation of Front-end and Back-end

- **The front-end projects use the rainbow UI as their implementation framework.**
- **The back-end applications use Spring Boot as their implementation framework.**

Internal System Components and Integration

All applications on Gemini are loosely coupled through APIs.

- **In the New Business (NB) App, proposal and NB processing information are stored in its database.**

When a policy is issued, all relevant information is transferred to the SOR tables by calling the PA BS API.
This effectively separates NB processing from post-insurance activities, significantly enhancing data integrity for each policy.

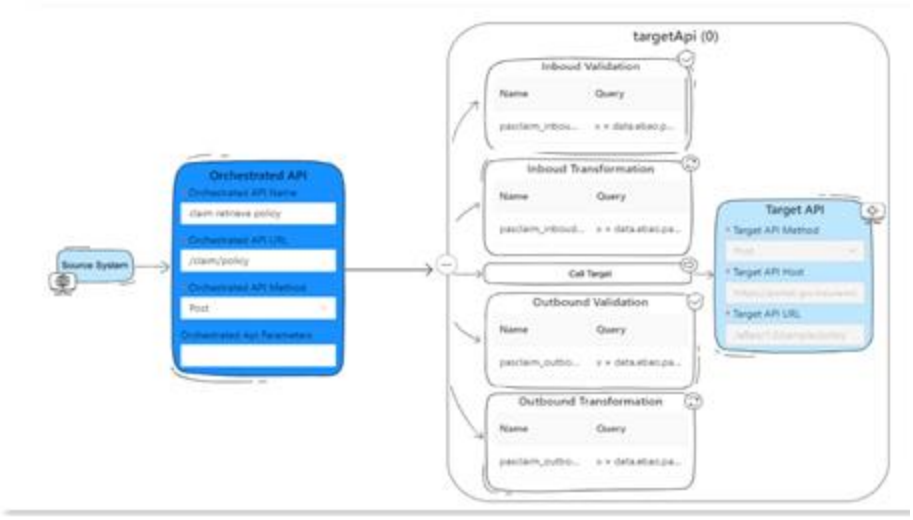

- **In the Customer Service (CS) App, the policy data before the change will be copied from the SOR by calling PA BS API and stored in the CS database as interim policy information.**
  This effectively separates interim policies from valid policies, further improving data integrity for each polity.
  When the policy change is issued, the updated policy information is transferred to SOR by calling PA BS API.

- **In the Claim App, policy data on the event date will be copied from the SOR by calling PA BS API. When a claim case is settled, all related data will be stored in the Claim App database.**
  The claim BCP and policy change information will be transferred to the SOR by calling PA BS API.

- **In the Underwriting App, the NB/CS/claim information will be copied from NB/CS/Claim Apps by APIs.**
  When underwriting is finished, the underwriting information will be transferred to NB/CS/Claim Apps by APIs.

External System Integration

- **Gemini uses iHub as its default integration layer with external systems. iHub provides low-code capability of API orchestration for integration with third-party systems.**

3. Global Transaction

- **Gemini employs the InsureMO global transaction framework, which is a modified version of the Seata AT mode, In this framework, compensation data preparation is directly completed by the JPA Entity.**

Normal Commit Process:

1. **Enable global transaction.**
2. **Enable local transaction.**
3. **Extract the entity from the database and record the current attribute as compensation data.**
4. **Make API calls.**
    1. **The service of the called API can perceive that the current request is part of the global transaction.**
    2. **The service of the called API starts the local transaction.**
    3. **The service of the called API takes the entity from the database and records the current attribute as compensation data.**
    4. **Business logic of the service called API.**
    5. **The service of the called API submits the local transaction, inserts the compensation data in t_pub_tx_undo_log, and returns the API call results.**
5. **Run business logic.**

6. **Commit local transaction.**
7. **Submit global transactions and delete compensation data in t_pub_tx_undo_log asynchronously.**

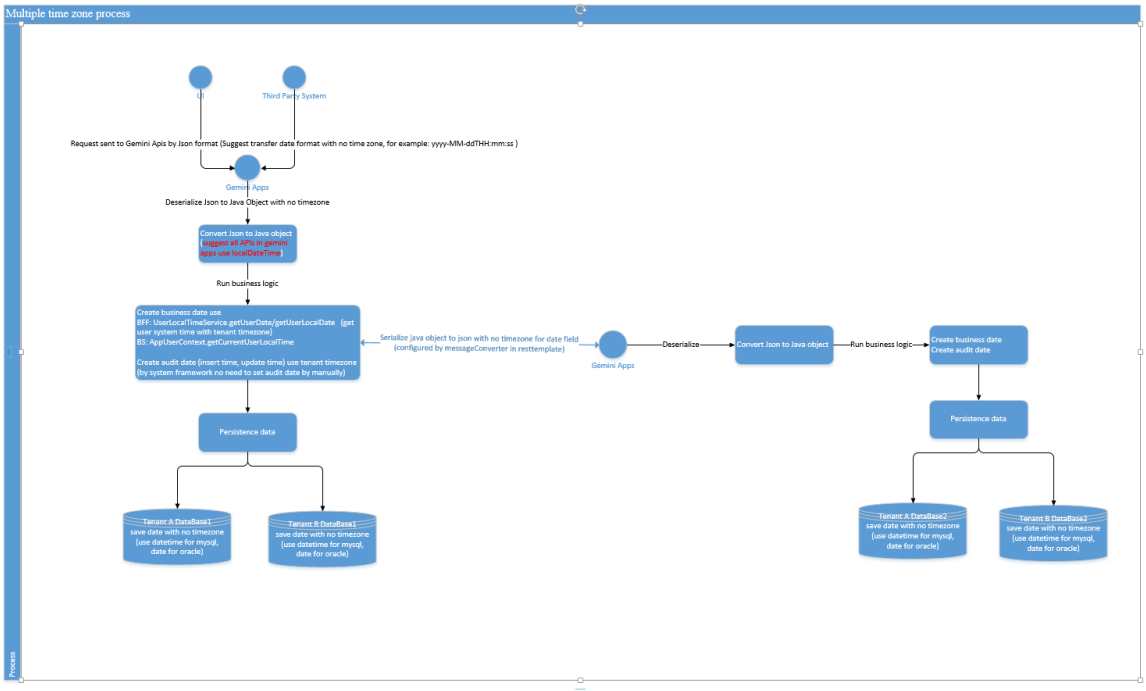

Rollback Process:

1. **Enable global transaction.**
2. **Enable local transaction.**
3. **Extract the entity from the database and record the current attribute as compensation data.**
4. **Make API calls.**
    1. **The service of the called API can perceive that the current request is part of the global transaction.**
    2. **The service of the called API starts the local transaction.**
    3. **The service of the called API takes the entity from the database and records the current attribute as compensation data.**
    4. **Business logic of the service called API.**
    5. **The service of the called API submits the local transaction, inserts the compensation data in t_pub_tx_undo_log, and returns the API call results.**
5. **Run business logic.**
6. **Roll back the local transaction and asynchronously notify other workbench to roll back the current global transaction.**
    1. **The called API service receives an asynchronous rollback request.**
    2. **The called API service starts the local transaction.**
    3. **The called API service gets compensation data from t_pub_tx_undo_log, and applies it.**
    4. **The called API service submits the local transaction and deletes compensation data in t_pub_tx_undo_log.**
    5. **Rollback completed.**

4. Tenant Level Time Zone

Gemini supports multiple time zones based on the tenant level.

1. **The JVM timezone of Gemini apps is UTC. No additional JVM startup parameters are required (The timezone of the operating system in the container is UTC).**
2. **During tenant onboarding, the timezone specific to the tenant should be configured for GI and LI.**
3. **BS Configuration Center is responsible for adding the tenant-level timezone.**
4. **MySQL database should add timezone configuration of jdbc url in configure center (useTimezone=true&serverTimezone=UTC).**
5. **For Oracle databases, the tenant's timezone should be applied during onboarding.**
6. **Business data in MySQL database should use datetime (no timezone), while business data in the Oracle database should use date (no timezone).**

Cache Management

Gemini uses Spring Cache to store frequently accessed business configuration data, including product configuration data, fund info, and user authority.

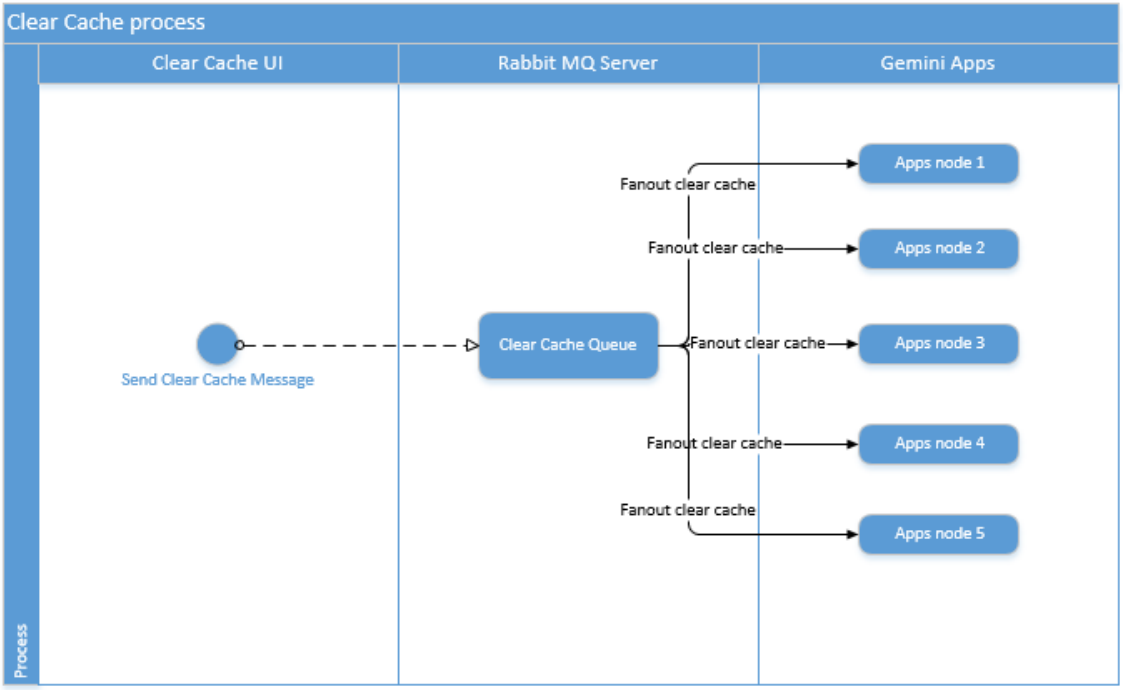

1. **The cache name should start with '[BIZ-DATA]'+ module name + detail, for example: "[BIZ-DATA]" + "[FUND]" + "FundInfo".**

```java
/**
 * @param fundCode
 * @return
 */
@Override
@Cacheable(cacheNames = BizDataCacheNameConstants.FUND_INFO, keyGenerator = "localKeyGenerator")
public FundInfo getFundInfoByFundCode(String fundCode) {
    FundInfo fundInfo = new FundInfo();

    //get fundInfo with fundCode
    String url = insureMoRpcProperty.getBsHost().concat(ComBsSurfaceUri.FUND_BY_CODE.uri());
    HashMap<String, String> uriVariables = getUriVariables(insureMoRpcProperty.getInsurerCode());
    uriVariables.put("fundCode", fundCode);
    logger.info( msg: "#### get fund info url #### ==> : " + url);
    FundInfoResponse fundInfoResponse = insureMoRpcService.get(url,
            setBsHttpHeaders(insureMoRpcProperty.getTenantCode()),
            FundInfoResponse.class, queryParameter: null, uriVariables);
    logger.info(()->"#### get fund info response #### ==> : " + JSONUtils.objectToJson(fundInfoResponse));
    if (fundInfoResponse != null) {
        fundInfo = fundInfoResponse.getFundInfo();
    }

    return fundInfo;
}
```

2. **The default cache expiry time is configured as 24 hours, and Gemini features a centralized cache-clearing menu that broadcasts messages to the RabbitMQ server. Upon receiving this broadcast message, all Gemini applications will clear their local caches. The process is as follows:**

Gemini System Configuration

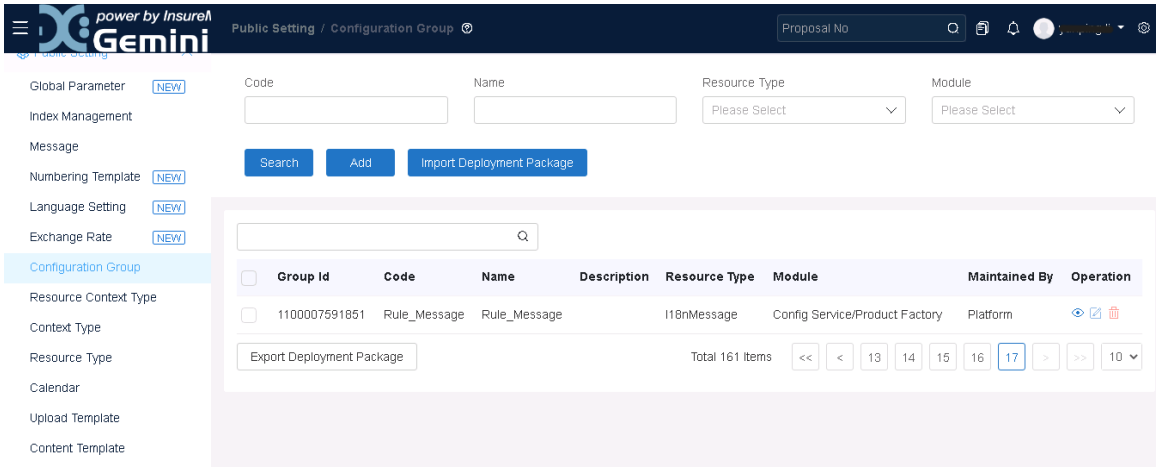

Summarize page

1. MC Environment URL

https://[tenantcode]-gimc.insuremo.com

2. Add New Configuration Group in New Tenant MC Environment

2.1 Add New Configuration Group in Menu

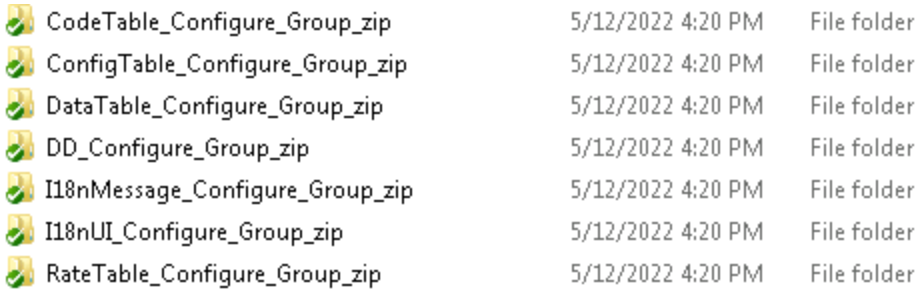

Menu path: public setting -> configuration group

- **Select resource type Code Table, click add, add new configuration groups for pa and claim.**
- **Select resource type Data Table, click add, add new configuration groups for pa and claim.**
- **Select resource type Parameter Table, click add, add new configuration groups for pa and claim.**
- **Select resource type Data Dictionary, click add, add new configuration groups for pa and claim.**
- **Select resource type I18n Message, click add, add new configuration groups for pa and claim.**
- **Select resource type I18n UI, click add, add new configuration groups for pa and claim.**
- **Select resource type Config Table, click add, add new configuration groups for pa and claim.**

2.2 Export release scripts to pa-data

Path: bizdata > context

2.3 Note

- **All new configuration data added by a project should be added in the new configure group in MC environment.**
- **When upgrade Gemini SDK version, it is necessary to merge pa-data, claim-data, common-data from Gemini to related project, then do CI/CD manually to MC environment (tenantcode-gimc.insuremo.com).**

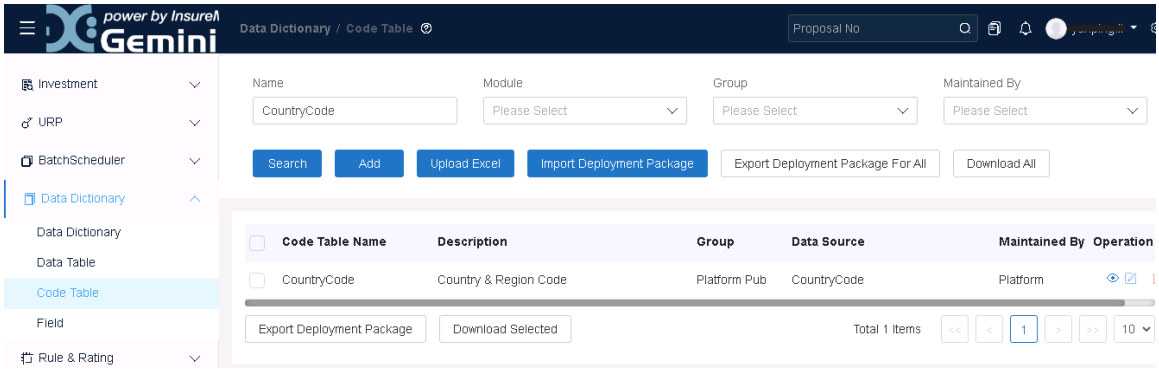

3. Code Table

- **Table structure:**
  t_dd_busi_data_table

note

When record_usage = 5， the Code Table won't be updated with the upgrade of the baseline.

- **Instruction**

note

The Code Table supports reloading. The Maintained By of the current Code Table on the Gemini is baseLine. If tenants want to reload the Code Table， they can create a new Code Table with the same name, and the corresponding Maintained By is Tenant.

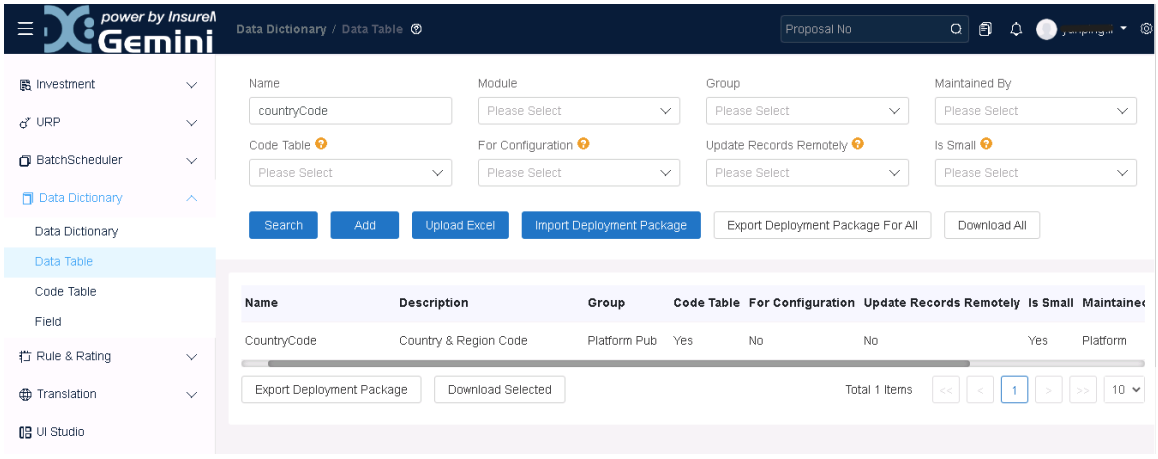

4. Data Table

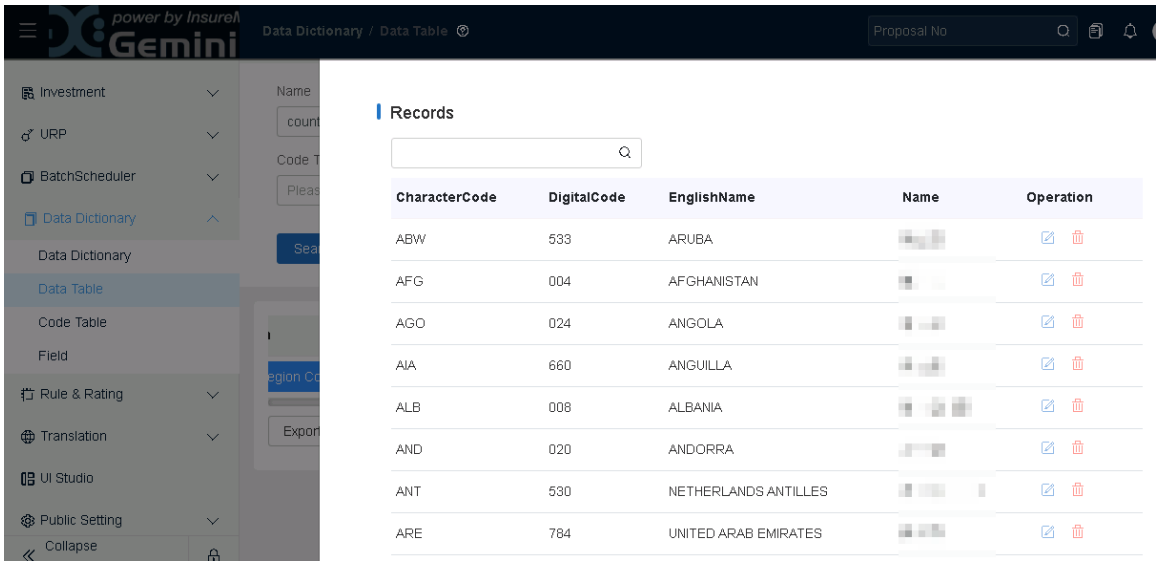

- **Table structure:**
  t_dd_busi_data_table_record

note

When record_usage = 5， the Data Table won’t be updated with the upgrade of the baseline.

- **Instruction**

note

Data Table supports reloading. The Maintained By of the current Data Table on the Gemini is baseLine. If tenants want to reload the Data Table, they can create a new Data Table with the same name based on the new Code Table, and the corresponding Maintained By is Tenant.

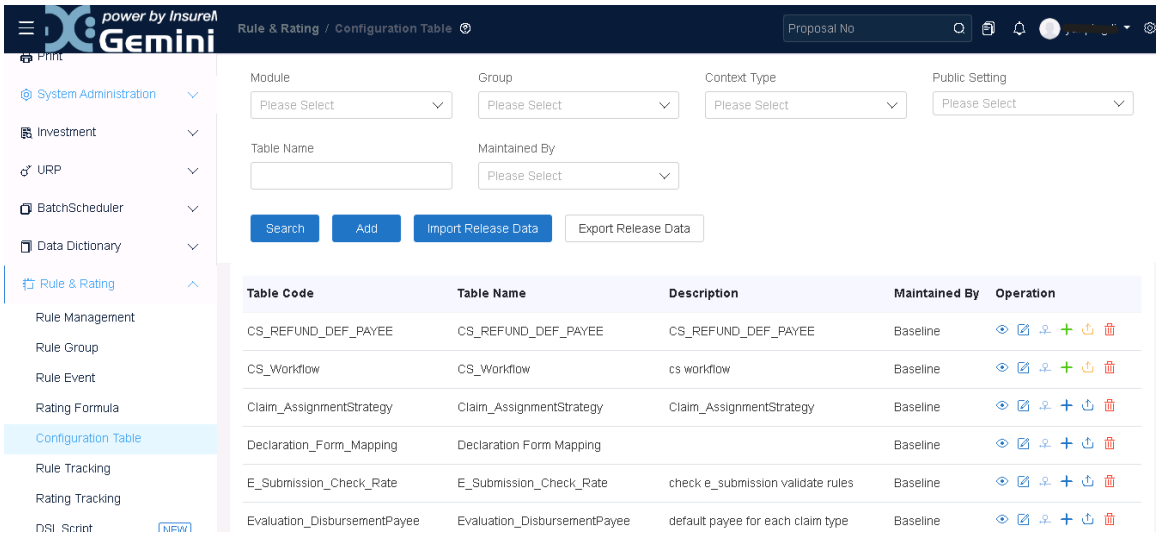

5. Rate Table

- **Table structure:**
  t_pub_res_ctx_relation
  t_rt_ratetable_column
  t_rt_ratetable_data
  t_pub_res_ctx_def
  t_pub_res_ctx_version

note

When record_usage = 5， the Rate Table won't be updated with the upgrade of the baseline.

- **Instruction**

note

Rate Table doesn't support reloading. The Maintained By of the current Rate Table on Gemini is baseLine. If tenants want to reconstruct new business, the original Rate Table needs to be cancelled to create a new one. The corresponding Maintained By is Tenant.

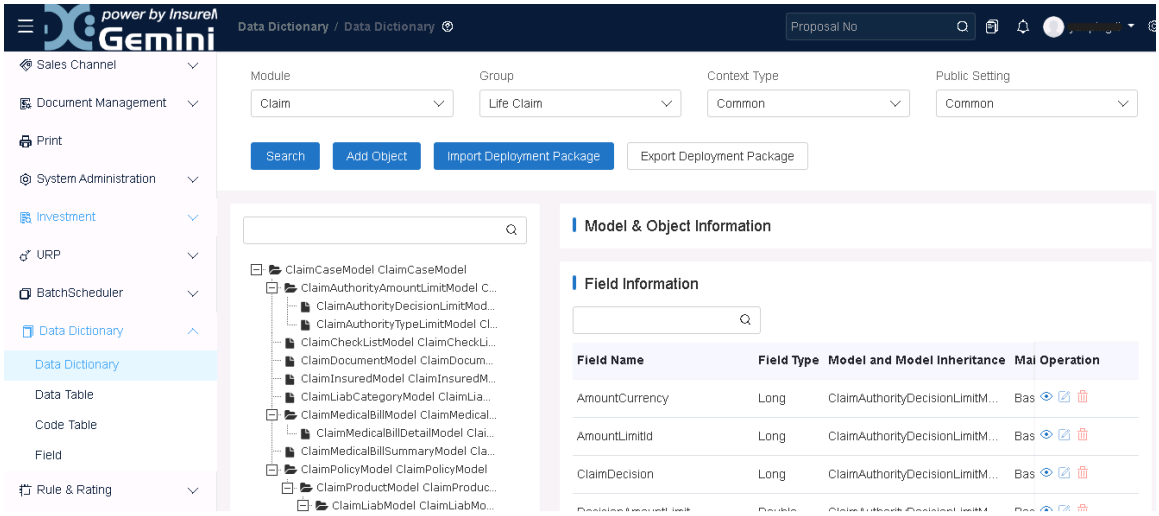

6. DD Object

- **Table structure:**
  t_dd_busi_context
  t_dd_busi_field
  t_dd_busi_field_binding
  t_dd_busi_java_class
  t_dd_busi_java_property
  t_dd_busi_model
  t_dd_busi_object

note

When record_usage = 5，the DD Object won't be updated with the upgrade of the baseline.

- **Instruction**

note

DD Object doesn't support reloading. The Maintained By of the current DD Object on Gemini is baseLine. If a tenant wants to reconstruct a new business, the original DD Object needs to be cancelled to create a new one. The corresponding Maintained By is Tenant.

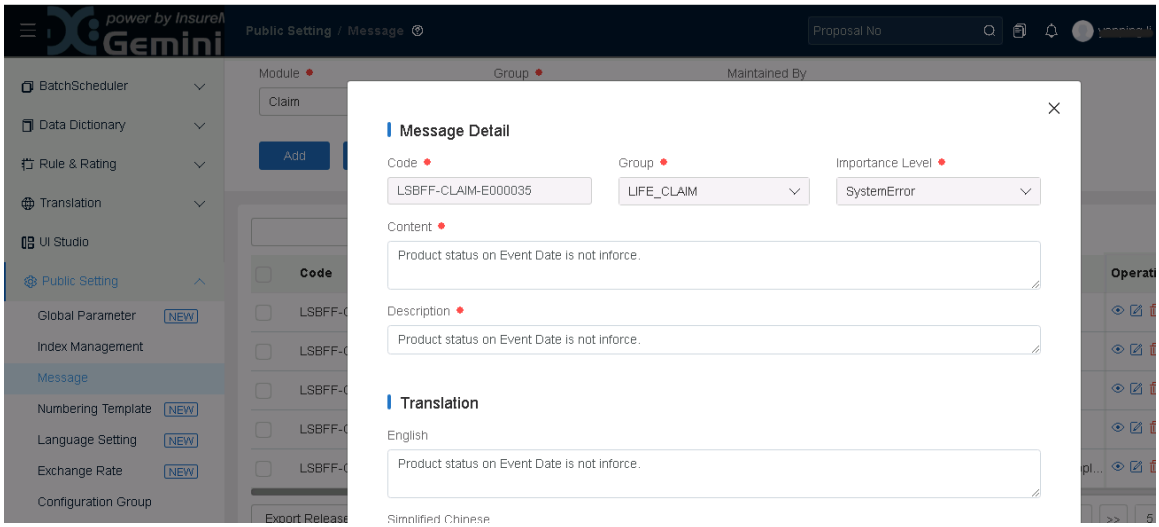

7. I18n Message

- **Table structure:**
  t_pub_configuration_group
  t_i18n_code
  t_pub_resource_bundle
  t_pub_res_ctx_relation

note

When record_usage = 5，the I18n Message won't be updated with the upgrade of the baseline.

- **Instruction**

note

I18n Message supports reloading. The Maintained By of the current I18n Message on the Gemini is baseLine. If tenants want to reload the I18n Message，they can create a new I18n Message with the same name based on the new Code Table, and the corresponding Maintained By is Tenant.

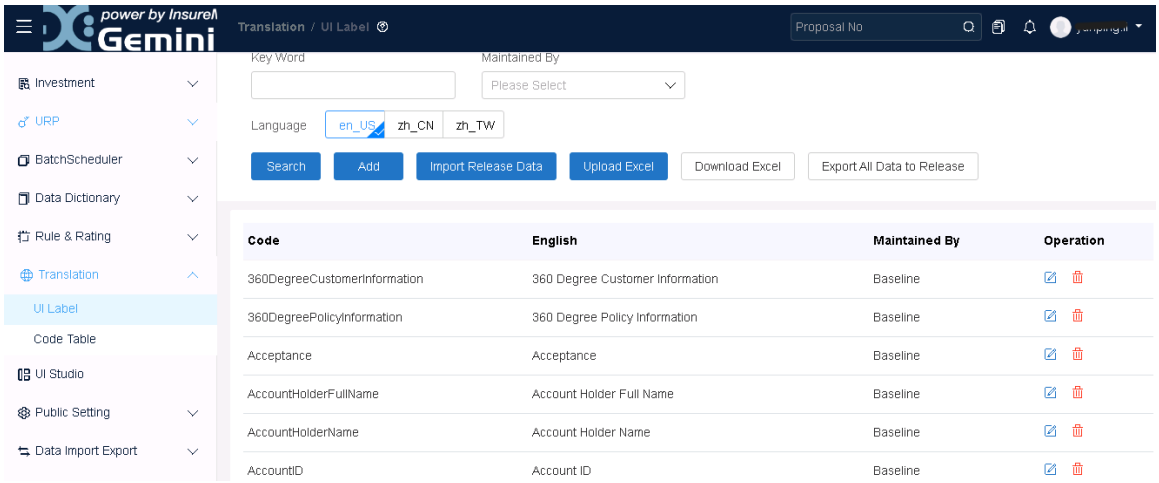

8. I18n UI

- **Table structure:**
  t_pub_configuration_group
  t_i18n_code
  t_pub_resource_bundle
  t_pub_res_ctx_relation

note

When record_usage = 5，the I18n UI won't be updated with the upgrade of the baseline.

- **Instruction**

note

I18nUI supports reloading. The Maintained By of the current I18nUI on the Gemini is baseLine. If tenants want to reload the I18nUI， they can create a new I18nUI with the same name based on the new Code Table, and the corresponding Maintained By is Tenant.

Gemini New Business User Guide

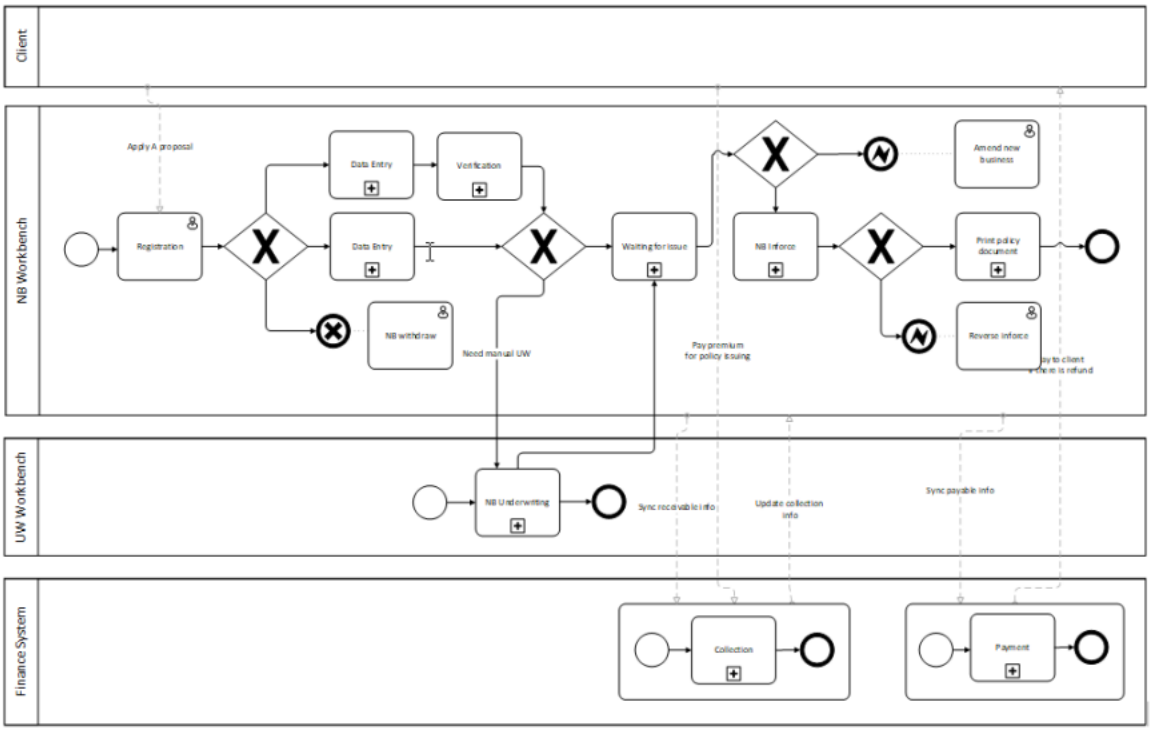

Summarize page

New Business Overview

New Business (NB) constitutes the primary, initial stage of insurance business. Two specialized modules support NB operations: New Business Workbench and Underwriting Workbench.

The New Business Workbench (NB Workbench, NB Application, or NB Apps) is a component of the policy administration system (PAS). It serves as a dedicated, back-office-facing application for insurance company staff to to Capture and validate insurance-related data. In addition, given the complexity of the insurance business —— such as policy withdrawal and reversal pre/post the issuance —— the New Business module must address all potential scenarios arising in real-world business.

Figure 1. Workflow of New Business

Create an Individual Policy

You can go through the following stages to create a policy:

- Initial Registration (Reception):
  Upon getting a new policy proposal from sales channels such as agents or online platforms, counter staff utilize the New Business Workbench to record basic details like applicant identity, proposed policy start date, and initial coverage preferences.

- Data Entry:
  A specialized module helps you input a wide array of information from the application form, encompassing the basic information, policyholder information, life assured information, payment method information, beneficiary information, product information, outstanding issue, and declaration information.

- Verification:
  After data entry, a check is conducted to spot errors like incorrect formatting or missing fields. If found, the proposal is either sent back to the data entry stage for correction or adjusted during verification.

- Underwriting:
  The system first runs the proposal through auto-underwriting rules to assess

risks. If manual assessment is required, the proposal will be sent to underwriting where underwriters will evaluate the risks and make appropriate decisions accordingly.

- Collection:
  When policy benefits rely on premium payment, full collection is essential.
- Inforce:
  The policy undergoes a final round of automated validations. Once these validations are cleared, the policy becomes active.

Initial Registration (Reception)

This topic explains related concepts about initial registration.

Upon receipt of a new proposal from the sales channel, staff are required to record the proposal information in the workbench.

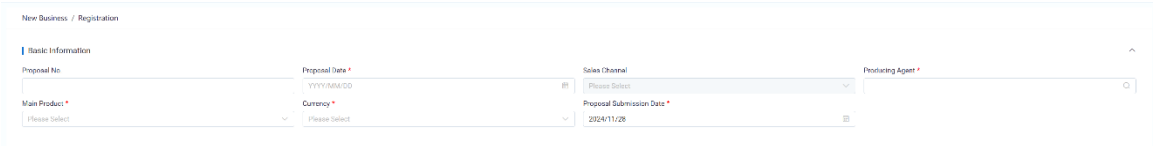

Register Initial Information

This topic describes how to enter simple proposal information in the System.

1. From the main menu, select **New Business > Registration**

Step Result: The Register Basic Information page is displayed.

Figure 2. Register Basic Information Page

2. On the basic information registration page, enter **Proposal No.**, Proposal Sign Date, Producing Agent, and select Main Product.
3. After entering the required information, click **Submit** to complete the registration in the system immediately.
4. Once submitted, you can click **“Go to Data Entry”** to go to the data entry page immediately.

RESULT:

Once submitted:

- A proposal number and policy number are generated and can be found on the new business work list page.
- The proposal status in work list changes to Waiting for data entry.

Data Entry

This topic provides a technical overview of the data entry (also referred to as detailed registration) module.

Data entry, also termed detailed registration, serves as the interface through which you can input all mandatory information required in an application form, encompassing the following categories of information: basic information, policyholder information, life assured information, payer information, payment method information, product information, nomination beneficiary information, nomination trustee information, beneficial owner information, trusted individual information, outstanding issue, and declaration information.

Search Out Target Proposal

This topic describes how to search out the target proposal's data entry task.

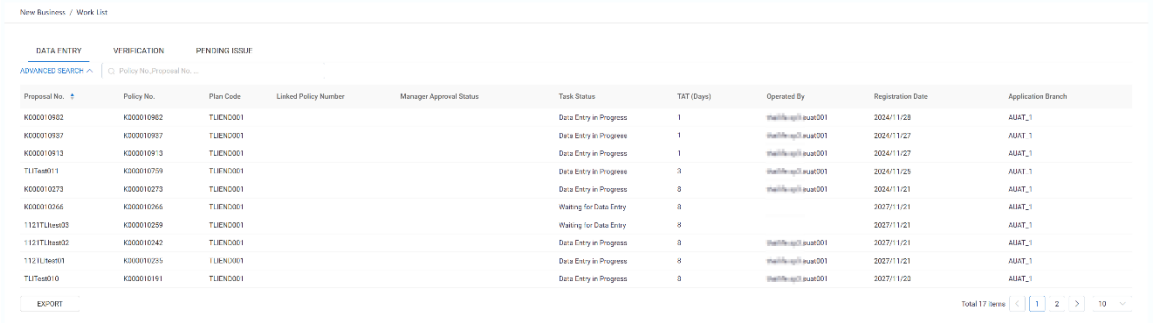

PREREQUISITE:

- Initial Registration has been finished.
- The proposal status is Waiting for Data Entry or Data Entry in Progress.

1. From the main menu, select **New Business > Work List**.

Step Result: The Data Entry Search page is displayed under the **Data Entry** tab.

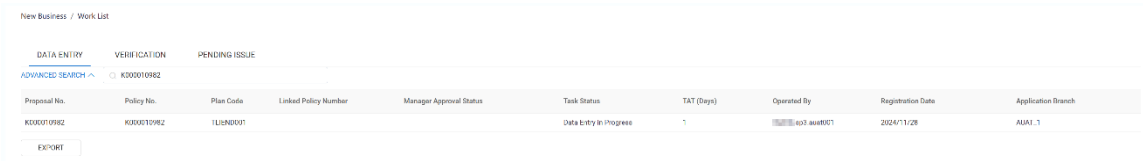

Figure 3. Data Entry Search Page

2. Set search criteria, and then click **Search**.

Step Result: The matching result is displayed on the **Search Result** table.

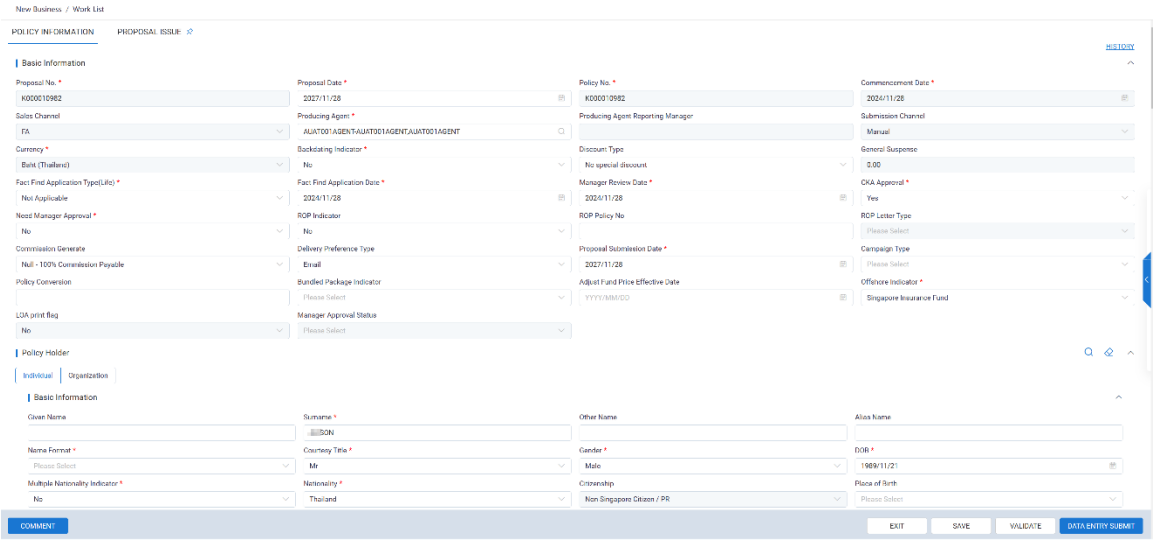

Figure 4. Data Entry Search Result

3. Click the hyperlink and you will go to the data entry page of the proposal.

Step Result: The data entry page is displayed.

Figure 5. Data Entry Page

Enter Policy Information

This topic describes how to enter or modify policy information on the policy information data entry page.

The Policy Information Data Entry module is designed for you to input all policy - related basic information into the application form. It covers the following aspects: basic information, policyholder information, life assured information, payer information, payment method information, product information, nomination beneficiary information, nomination trusted information, beneficial owner information, trusted individual information, and declaration information.

PREREQUISITE

- Initial registration has been finished.
- The proposal status is Waiting for Data Entry or Data Entry in Progress.

UI Features Need to Notice:

1. All sections can be folded.
2. There is a navigator folded in the right margin of the page. You can move your cursor over it and choose to go to any section on the page fast and conveniently.
3. If you leave the policy information page without clicking **SAVE**, information that you input won't be saved this time.

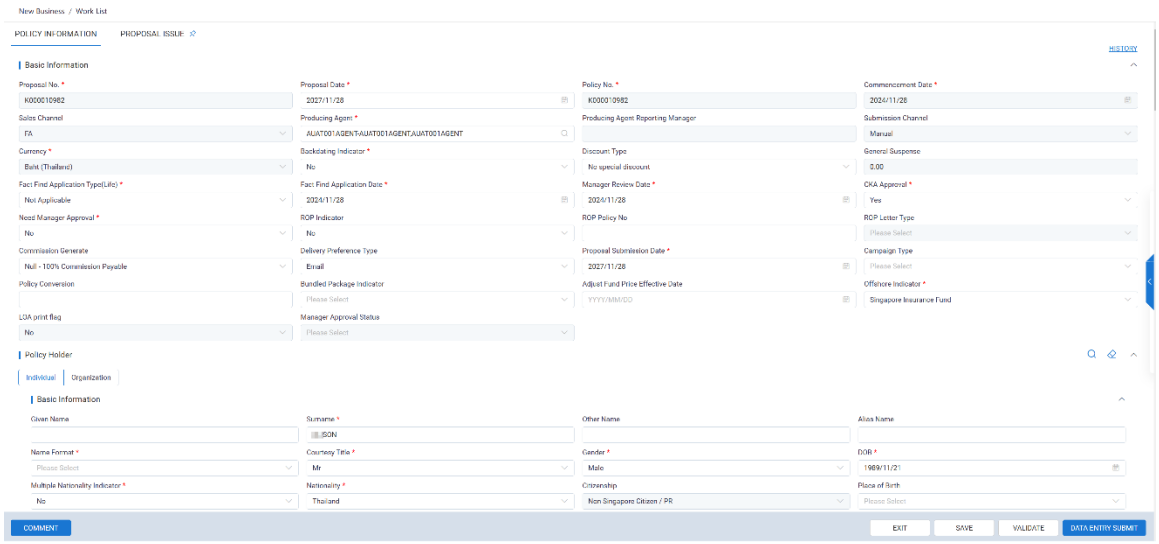

Amend Basic Information

This topic describes how to enter or modify proposal basic information on the policy information entry page.

1. In the new business worklist, click the hyperlink of the proposal and you will go to data entry page.

Step Result: The data entry page is displayed.

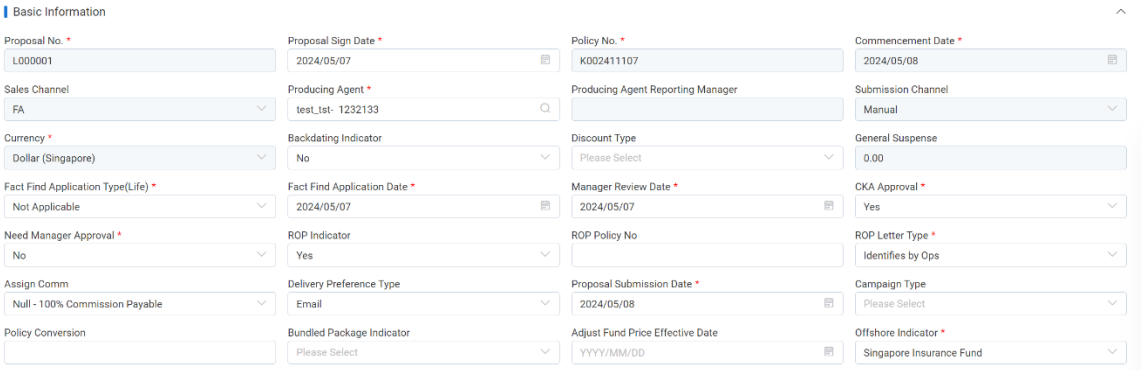

Figure 6. Data Entry Page

2. On the Data Entry page, enter or modify the basic proposal information in the **Basic Information** section.

Step Result: The **Basic Information** section is displayed.

Figure 7. The Basic Information Section

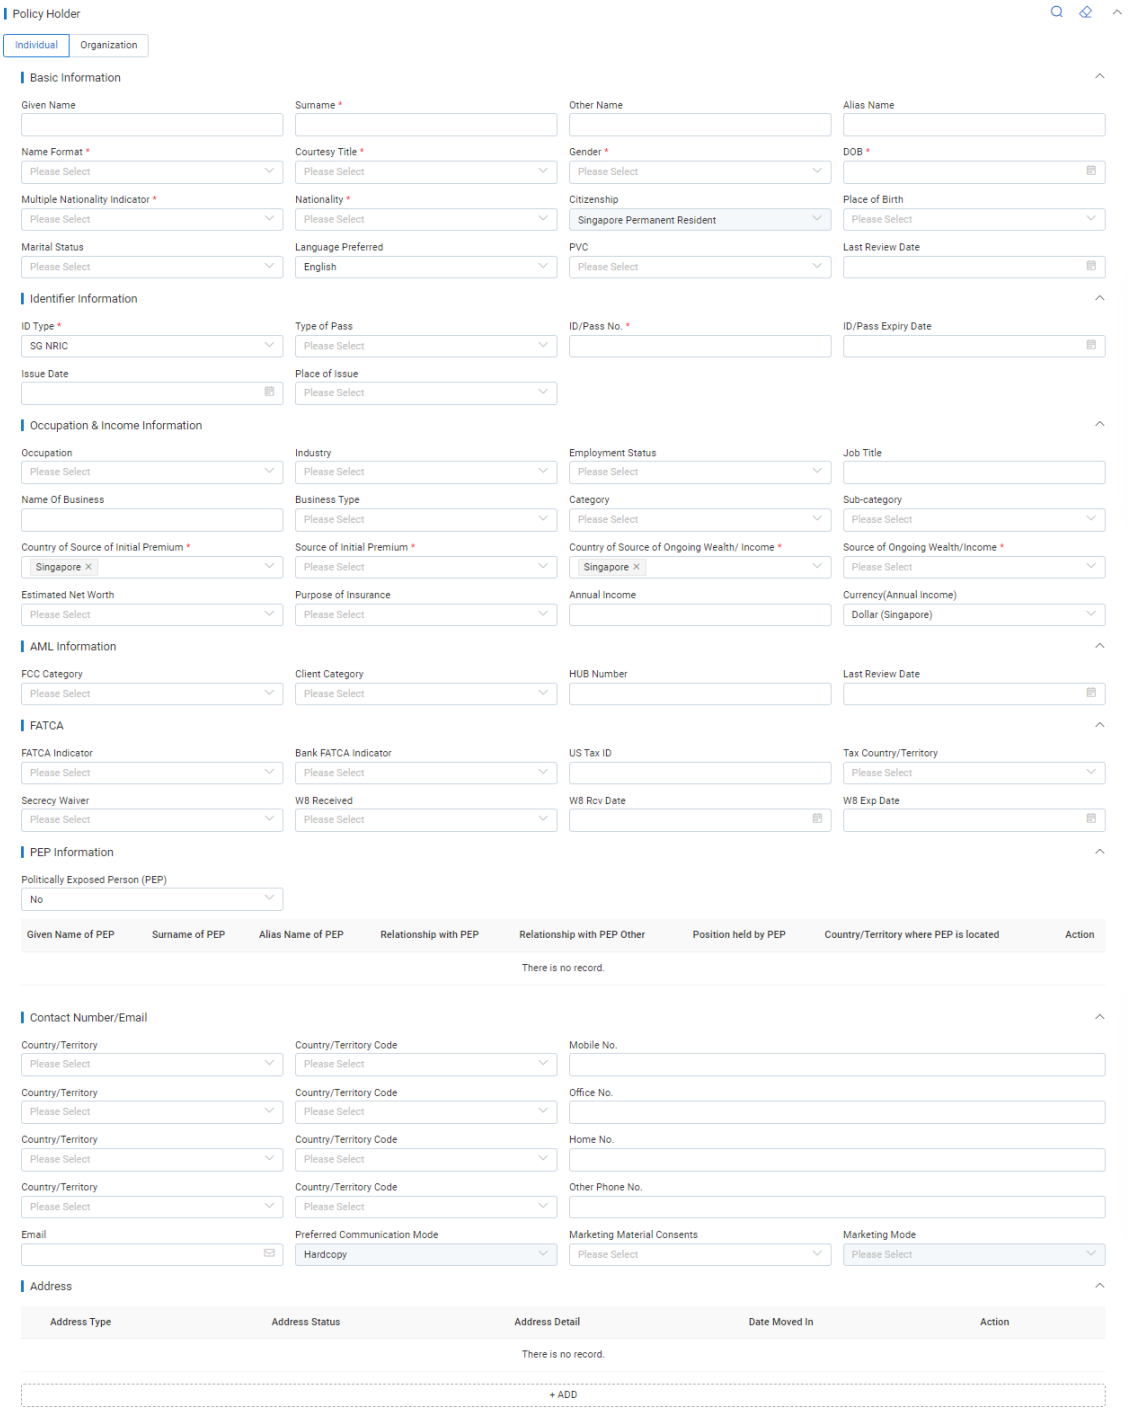

Enter Policyholder Information

This topic describes how to enter policyholder information on the Data Entry page.

1. On the Policy Information Entry page, enter policyholder information in the **Policyholder Information** section.

Step Result: The **Policyholder Information** section is displayed as follows.

Figure 8. Policyholder Section

2. In the policyholder information section, you can choose individual or organization to be policyholder type.

If	**Result**
Click **Individual**	Individual information panel is displayed

If	Result
Click **Organization**	Organization information panel is displayed

Step Result: The Individual/Organization policyholder information panel displays.

3. In the Address section, add Address information and choose which one to use.

Figure 9. Address

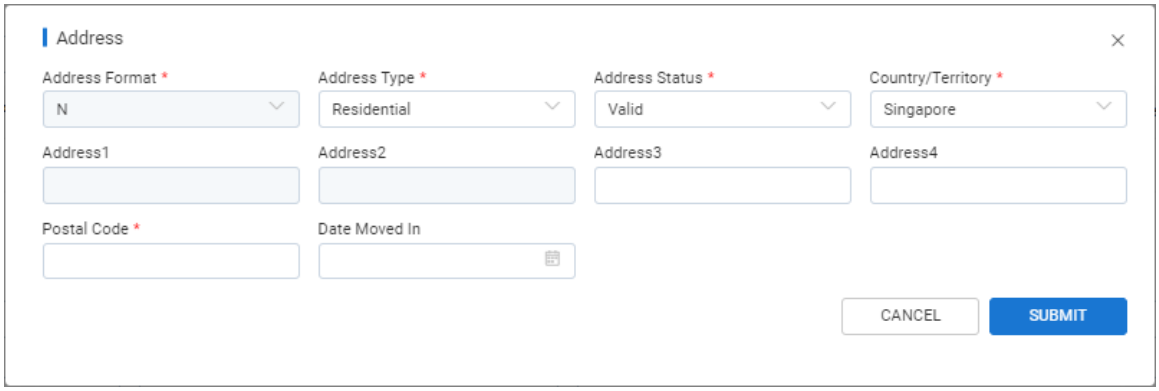

Figure 10. Individual Policyholder Information

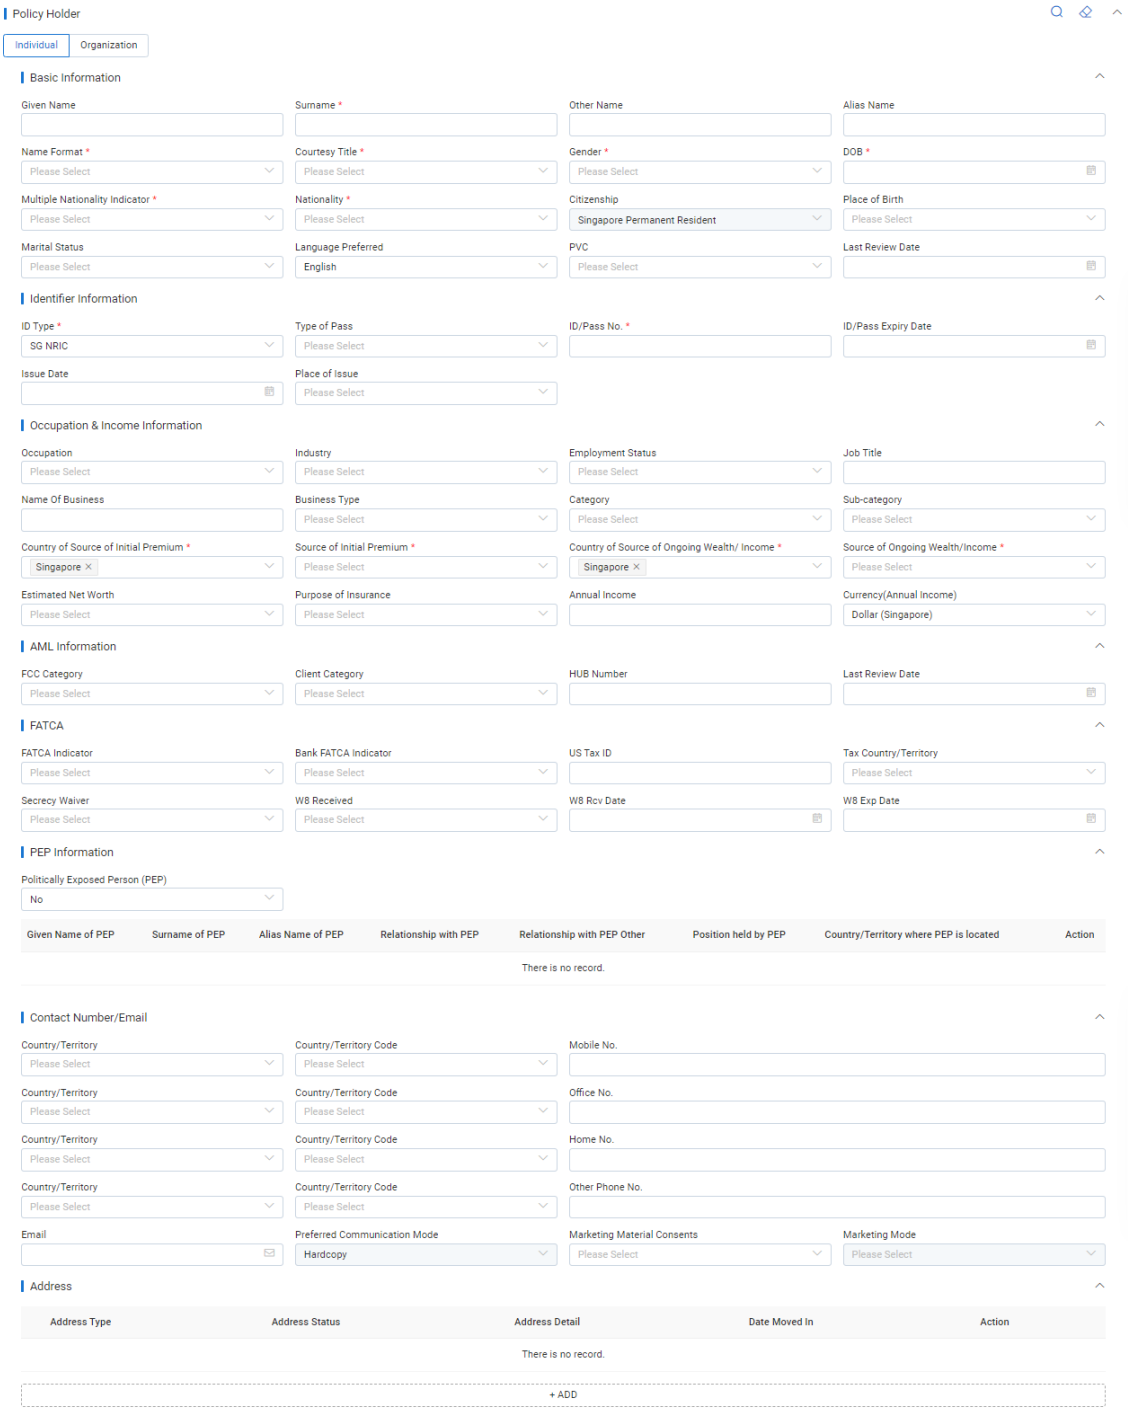

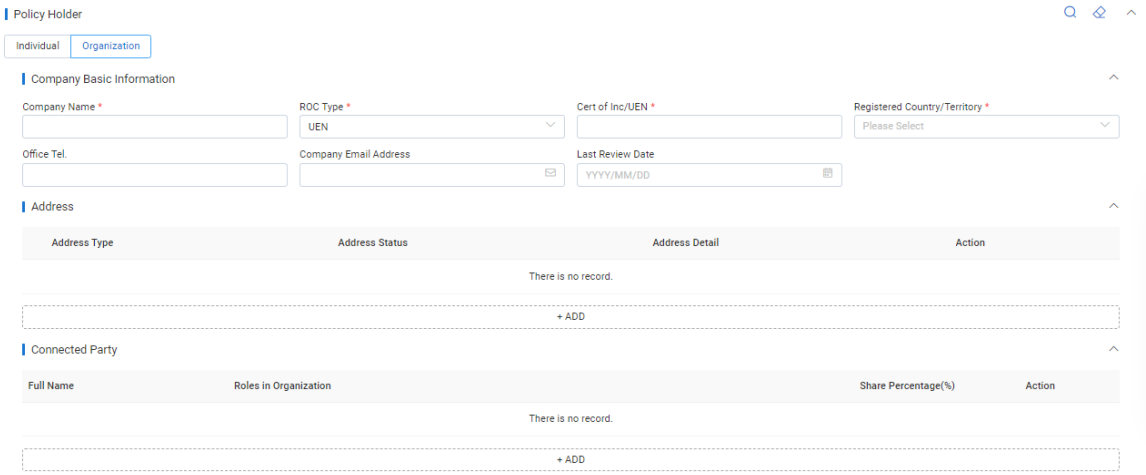

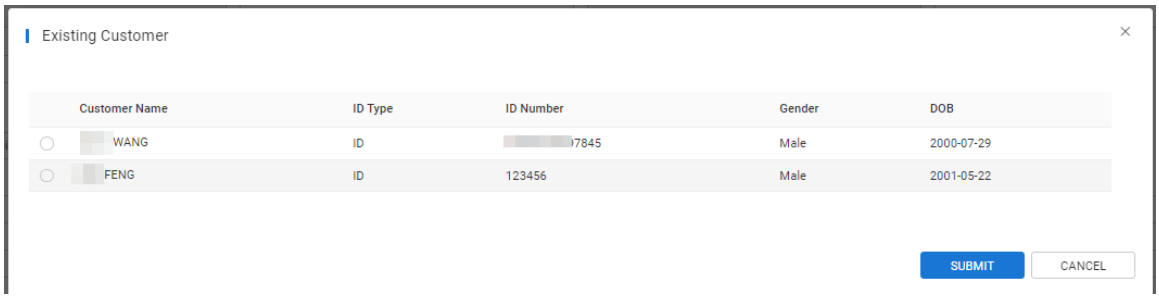

Figure 11. Organization Policyholder Information

4. **Search** for an existing individual/organization by inputting the name and clicking the search icon at the top right corner of the section. Also, you can enter a new customer.
5. (Optional) Click **reset** at the top right corner of the section if you need to empty all fields and enter or select new values.

Figure 12. Existing Customer Search Result

note

- When you click **Validate** on policy information entry page.

If there are similar customers in system, system will raise outstanding issue.

- When you click **Submit** in data entry or verification, system validates customers' five pieces of basic information for both new and searched customer.
    - If five pieces of basic information are the same as those of an existing customer, system updates the existing customer information.
    - If five pieces of basic information are not the same as those of an existing customer, system creates a new customer.

- When you complete the policy information entry and go back to modify policyholder information.

If you delete the policyholder or update policyholder information, related life assured, payer, nomination beneficiary, nomination trustee, beneficial owner, trusted individual, declaration and product information will be deleted or updated accordingly.

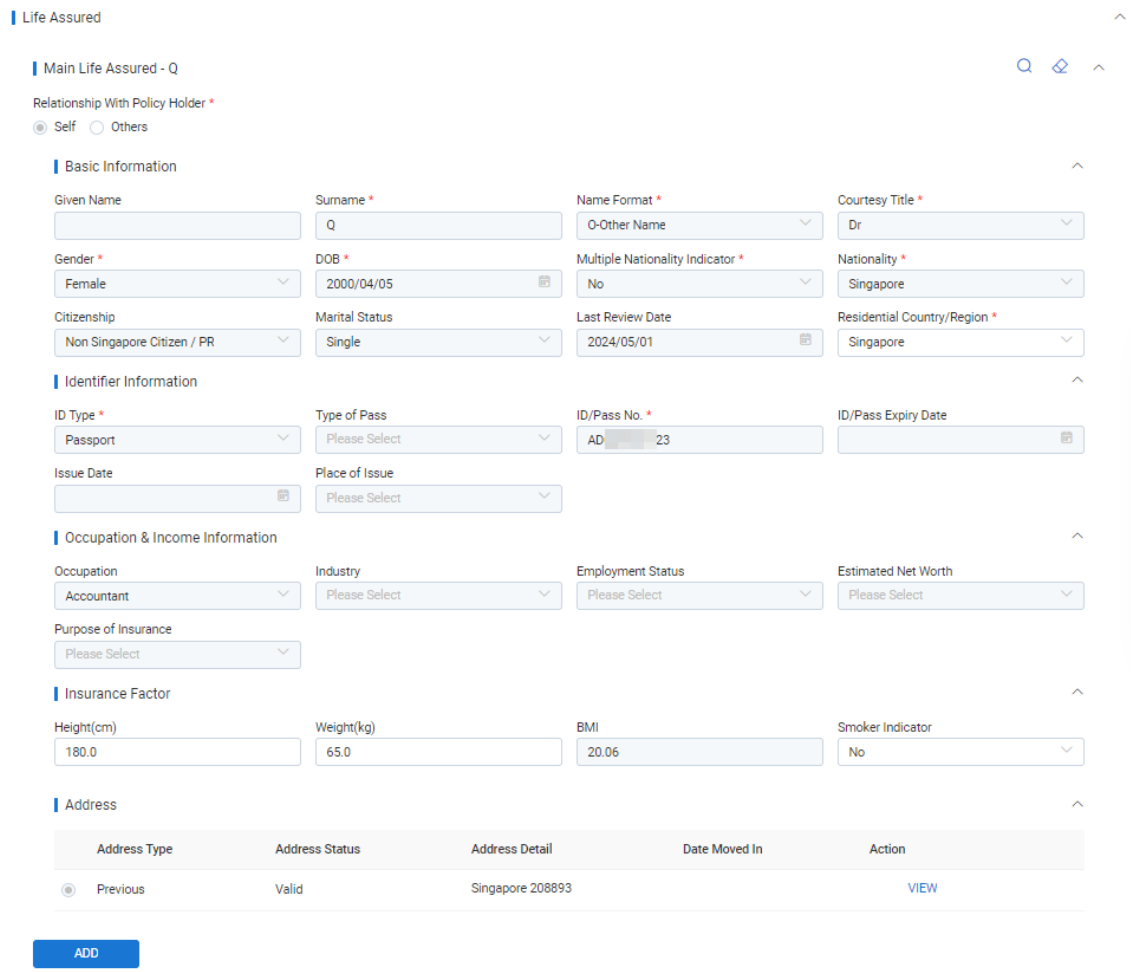

Enter Life Assured Information

This topic describes how to enter life assured information on the Data Entry page.

1. On the Policy Information Entry page, enter or modify the basic life assured information in the **Life Assured Information** section.

Step Result: The **Life Assured Information** section is displayed.

Figure 13. Life Assured Information Section

2. Select **relationship** with the policyholder. You can choose:

If	Action
Self	Life assured information is the same as that of policyholder
Others	Need to select relationship type and enter corresponding information

Step Result: Information Panel is displayed according to the selected relationship.

Figure 14. Self as Life Assured

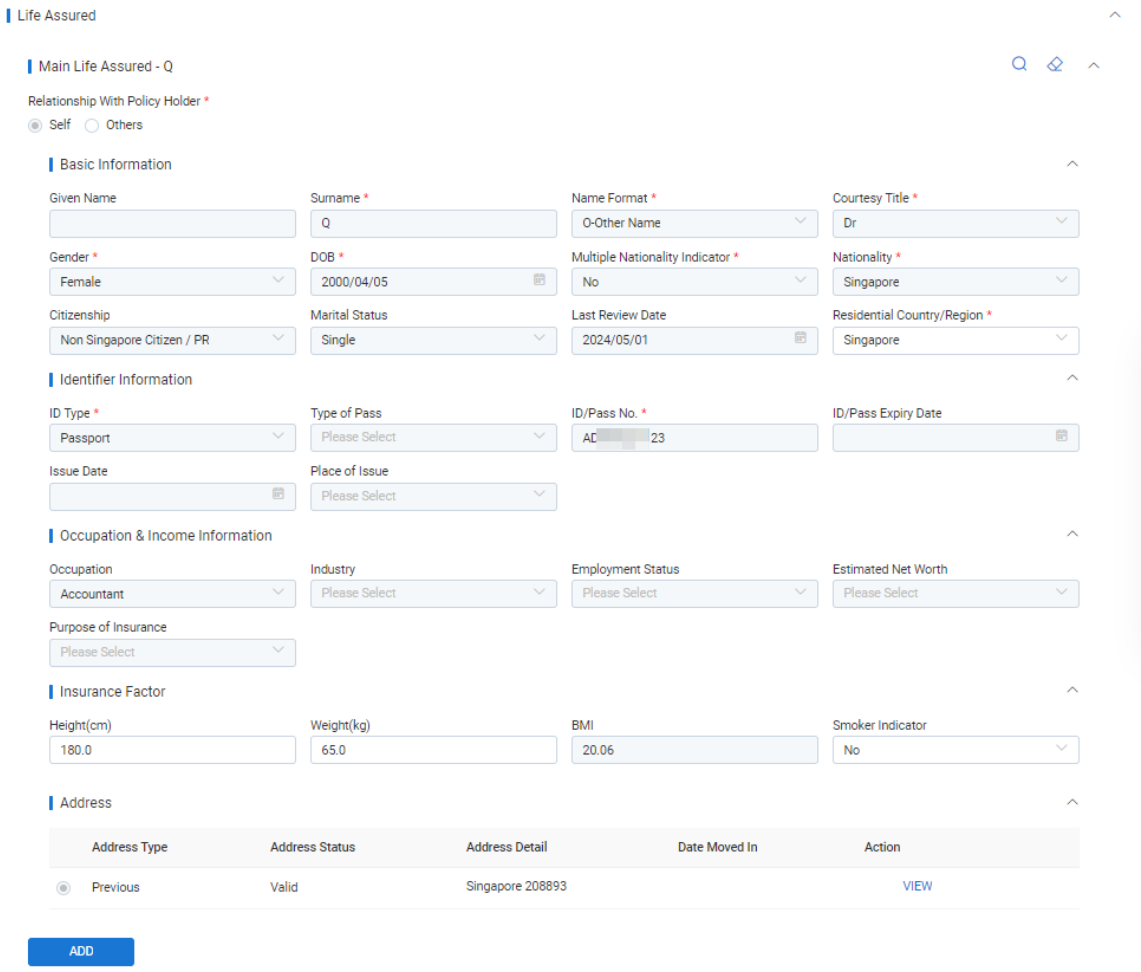

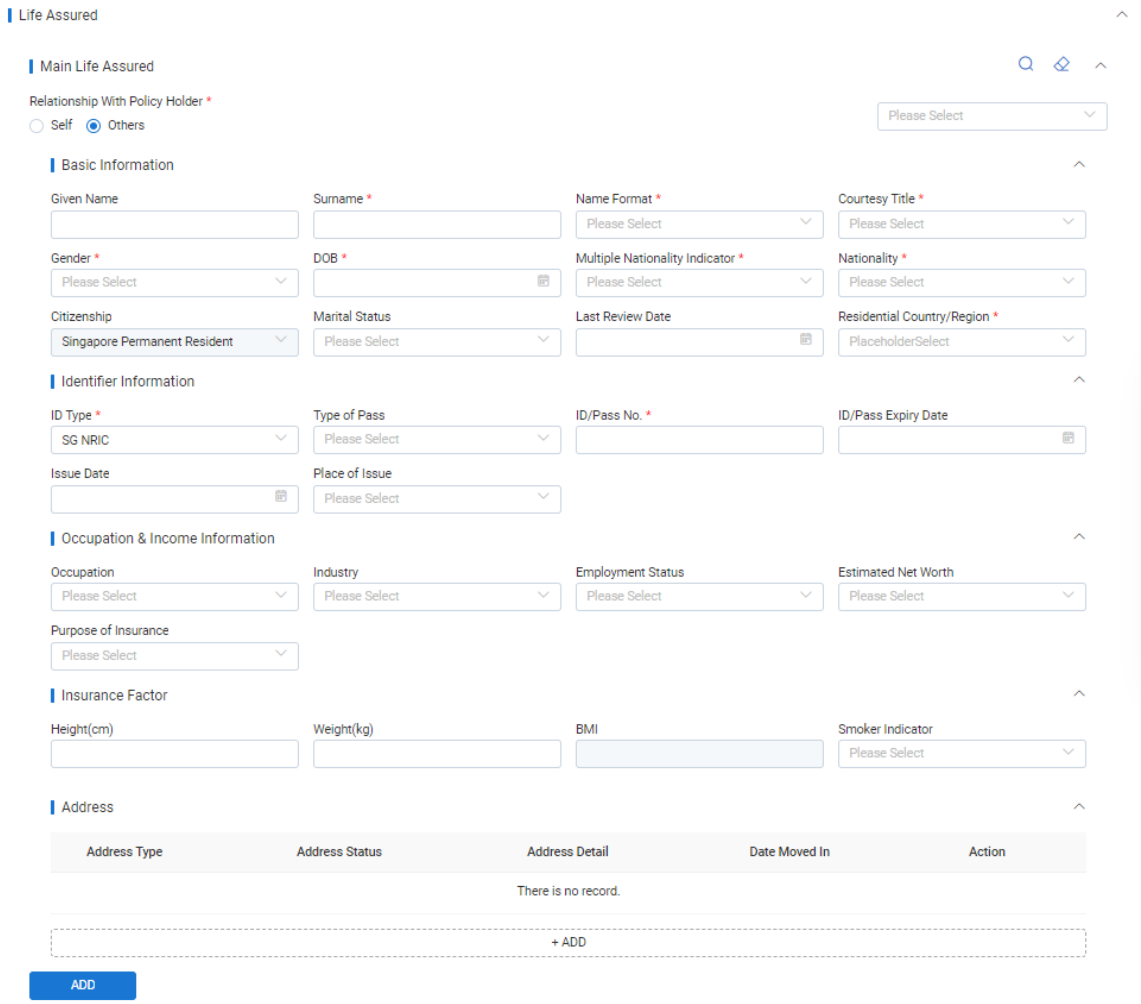

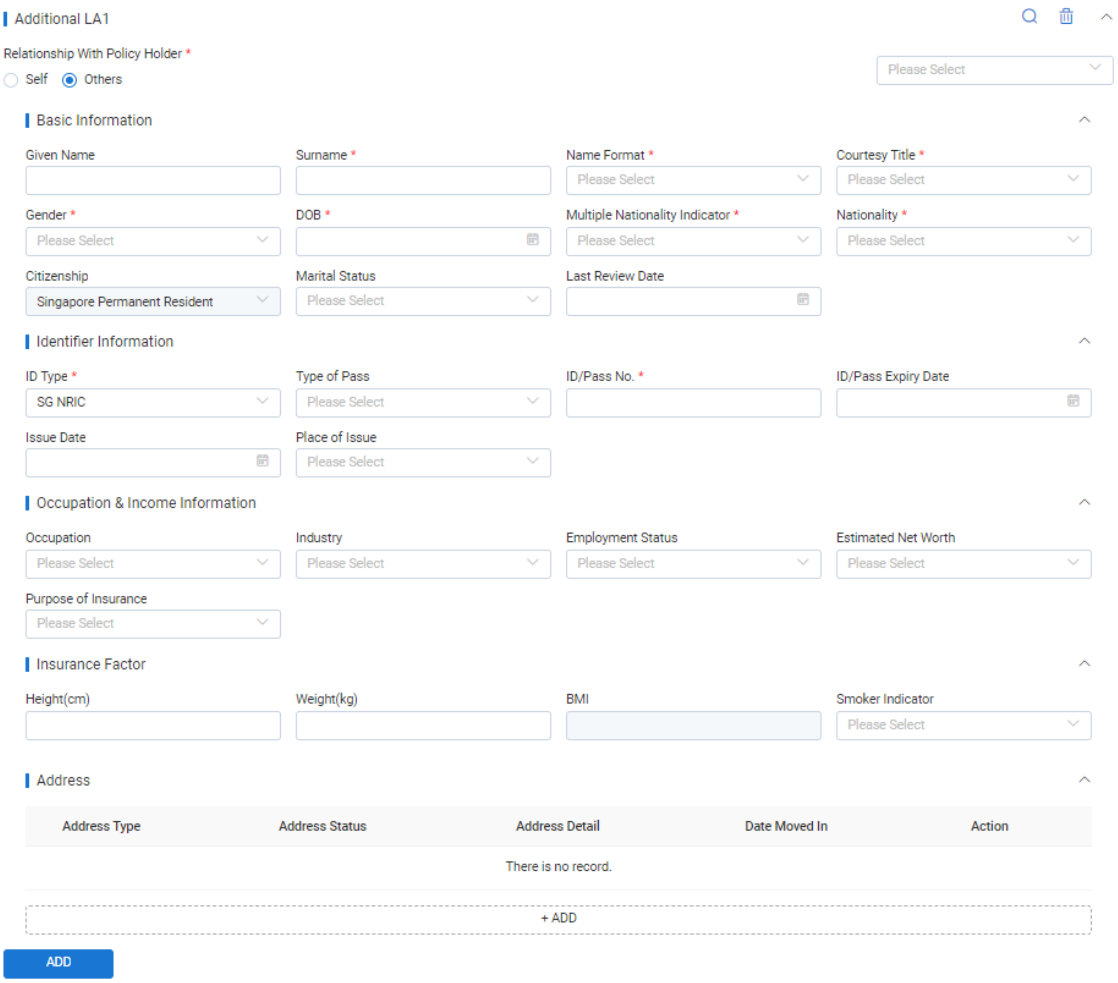

Figure 15. Others as Life Assured

3. **Search for Existing Life Assured** information package by inputting the name and clicking **Search** in the top right corner of the section. Also, you can enter a new customer.
4. For **address** information, you can select a previously saved address or add a new one.
5. (Optional) Click **reset** at the top right corner of the section if you need to empty all fields and enter or select new values.
6. (Optional) In the Life Assured section, click **Add** and repeat the steps above to add additional life assured customer.

Step Result: Additional LA information will be displayed.

Figure 16. Additional LA Section

note

When you complete the policy information entry and go back to delete life assured information.

- If you delete a life assured, related payer, declaration and product will be deleted accordingly.
- If you update fields including DOB/Gender/Occupation/Preferred life indicator/smoker indicator, system will sync latest life assured information to product section and update product information.
- If you update fields except DOB/Gender/Occupation/Preferred life indicator/smoker indicator, changes will be saved to this section.

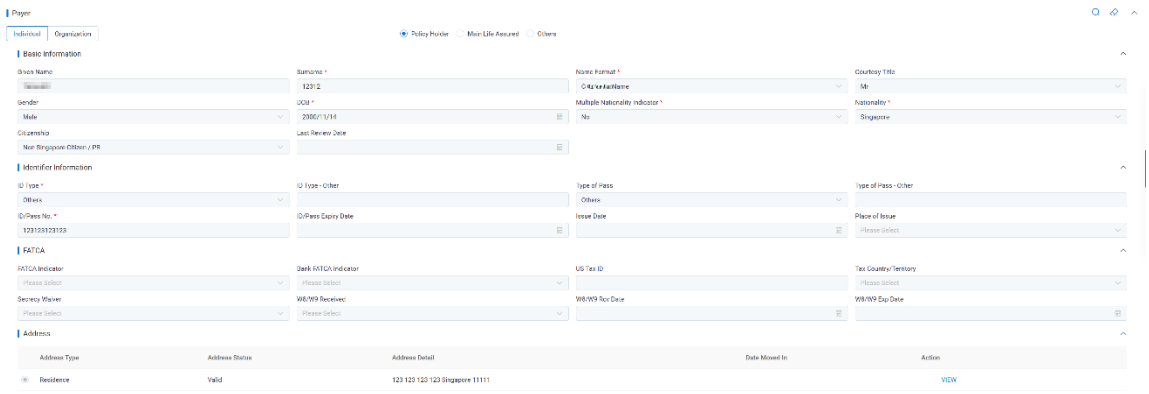

Enter Payer Information

This topic describes how to enter payer information on the Data Entry page.

1. On the Policy Information Entry page, enter or modify the payer information in the **Payer Information** section.

Step Result: The **Payer Information** section is displayed.

Figure 17. Payer Information Section

2. You can select **Individual/Organization** as payer type.

If	Action
Individual	select individual payer type: same as **Policyholder/Main Life Assured/Additional Life Assured/Others**
Organization	Can only select **Policyholder/Others** for organization payer type.

Result: Information Panel is displayed according to the selected payer type.

3. **Search for existing Payer** information package by inputting the name and clicking **Search** on the top right corner of the section. Also, you can enter a new customer.
4. For **address** information, you can select an existing address or add a new one for selection.
5. Click any area outside the payer section on the entry page to **save** input or changes.
6. (Optional) Click **reset** at the top right corner of the section if you need to empty all fields and enter or select new values.
7. (Optional) You can click **Fold** at the top right corner to fold or unfold the payer section.

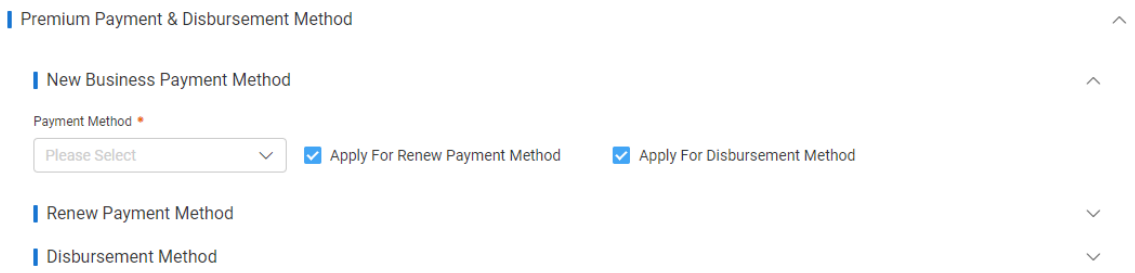

Enter Payment Information

This topic describes how to enter payment information on the Data Entry page.

1. On the Data Entry page, enter or modify the payment information in the **Premium Payment & Disbursement Method** section.

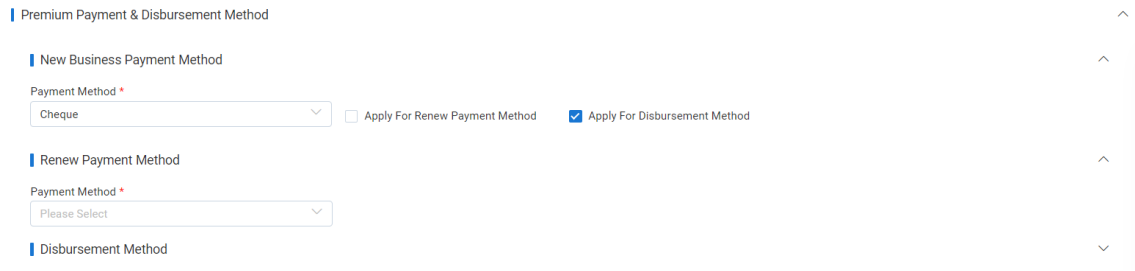

Step Result: The **Premium Payment & Disbursement Method** section is displayed.

Figure 18. Payment Information Section (1)

2. Once the payment method for new business is selected, the chosen option will, by default, be automatically applied to both the renewal payment method and the **Disbursement** payment method. In cases where the renewal or disbursement method differs from the new business payment method, you can deselect the “Apply For Renew Payment Method” or “Apply For Disbursement Method”. Subsequently, the renewal premium and **Disbursement** premium sections will expand and become editable.

Figure 19. Payment Information Section (2)

3. Supported payment methods include **Cash**, **Cheque**, **Direct Debit**, and **Credit Card**.

If	Action
Select **Cash, Cheque**	You need to choose Policyholder or Life Assured as the payer.

If	Action
Direct Debit, Credit Card	Besides payer, more information about account and bank is required.

Enter Product Information

This topic describes how to enter or modify product information in the product information entry section.

The Product Information section is designed to help you easily enter all the basic details related to the products. Here, you can fill in information about the main product. And if there are any additional products, you can also input their relevant details.

PREREQUISITE

- Policy information is completed and saved.

Modify Main Product Information

This section describes how to modify the main product information on the policy information entry page.

1. On the product information entry section, the main product selected during initial registration is displayed.
    - The system will input fields with default values according to the product definition.
    - System accesses the configuration table of coverage term---premium term relationship matrix. Once a value for either the coverage term or the premium term is selected, the other dropdown box will display only the values applicable under the condition of the selected value.

Step Result: The product information entry page is displayed as follows.

Figure 20. Product information entry page of Traditional Product

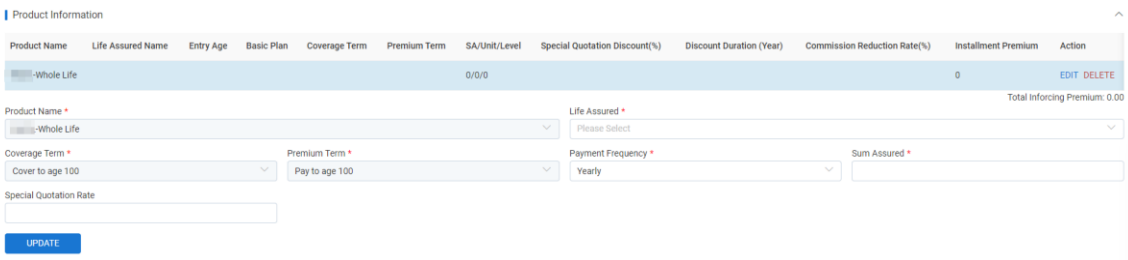

Figure 21. Product information entry page of Annuity Products

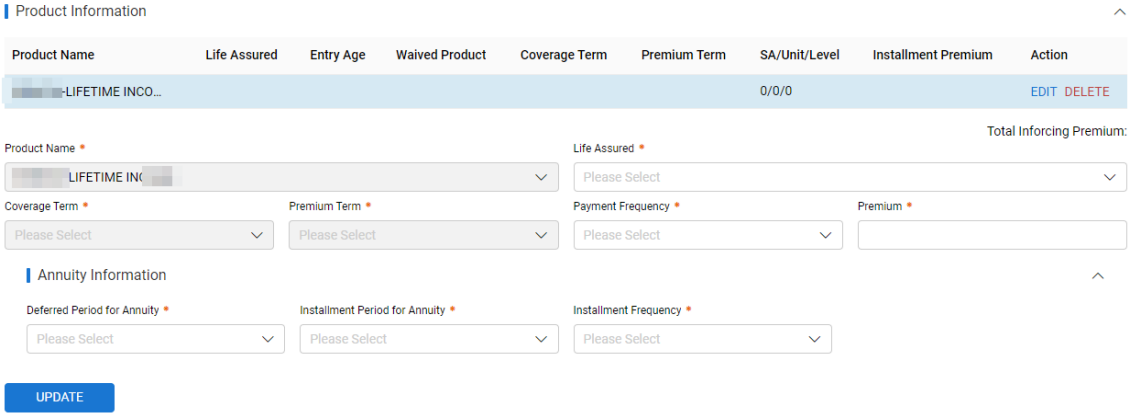

Figure 22. Product information entry page of Investment Products

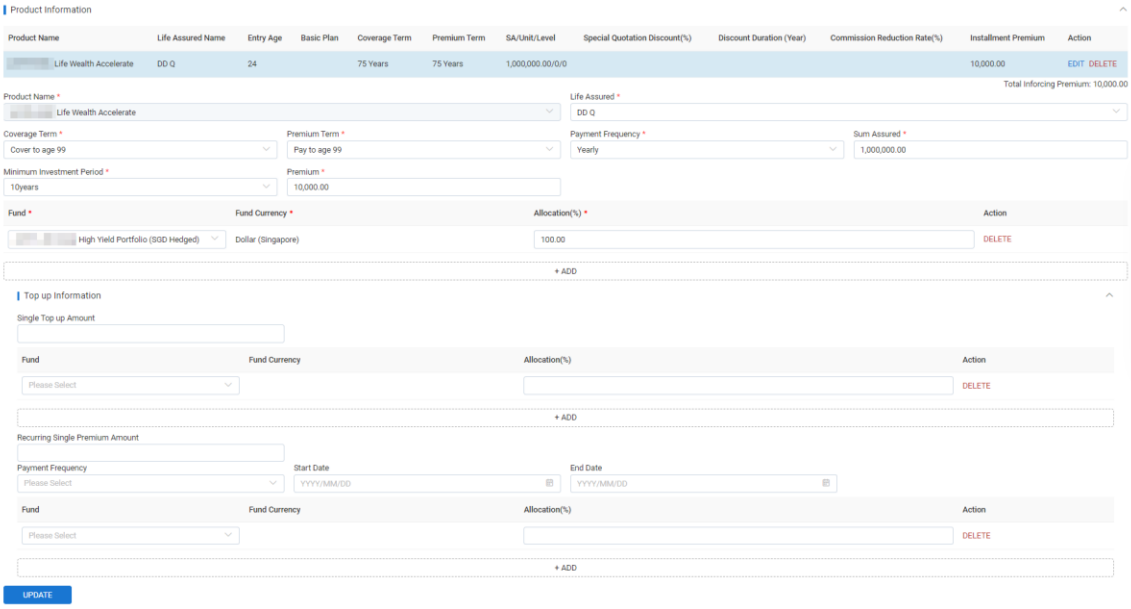

Figure 23. Product information entry page of Variable Annuity Products

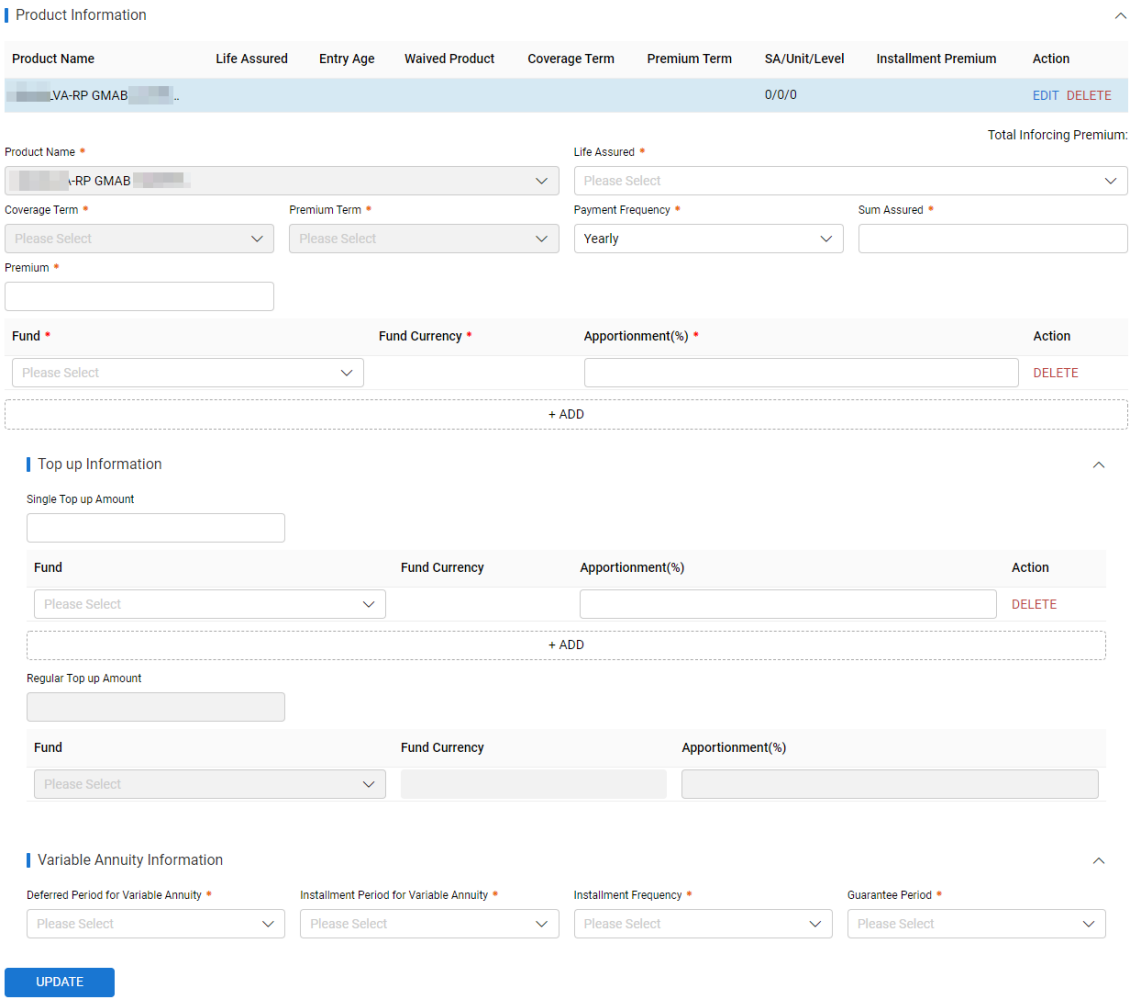

Figure 24. Product information entry page of Mortgage Products

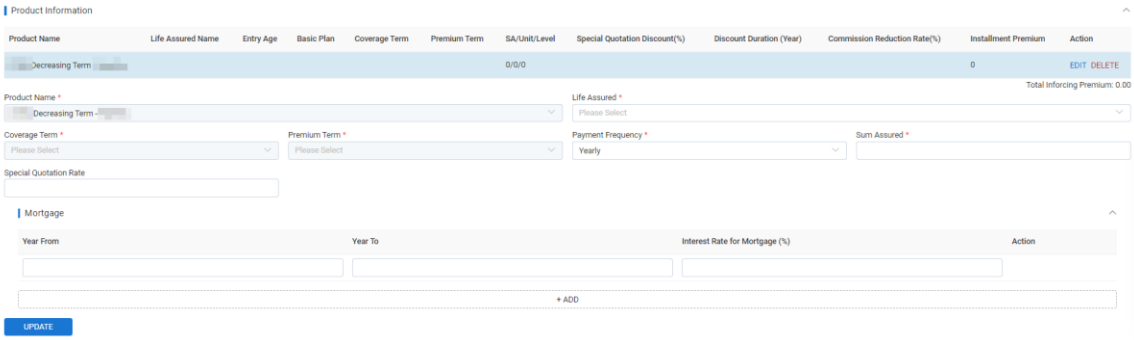

Figure 25. Product information entry page of joint life product

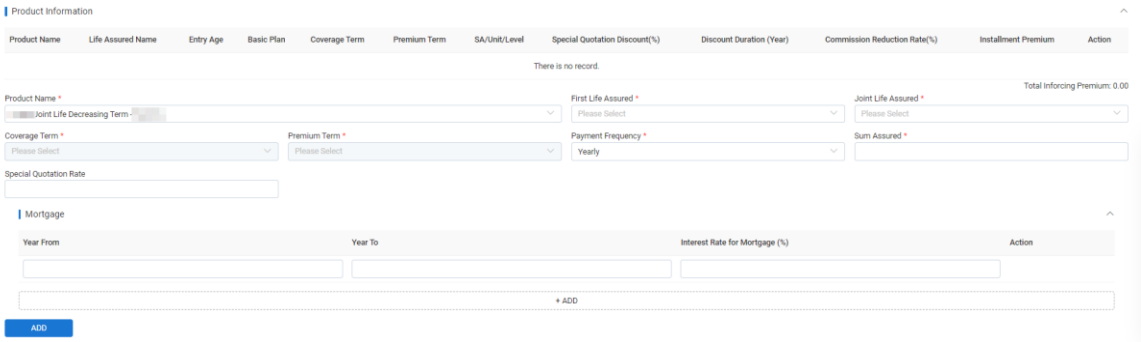

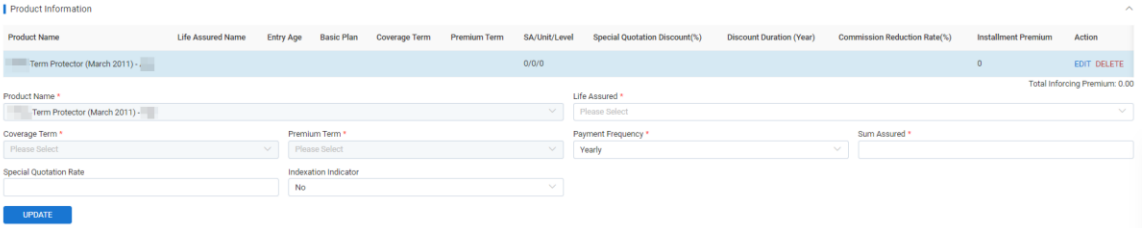

Figure 26. Product information entry page of indexation products

2. You can choose to click **Edit** or **Delete** in action column.

Action	**Result**
Click **Edit**	Edit panel of main product information is folded or unfolded.
Click **Delete**	If the current main product is deleted, all products will be deleted.

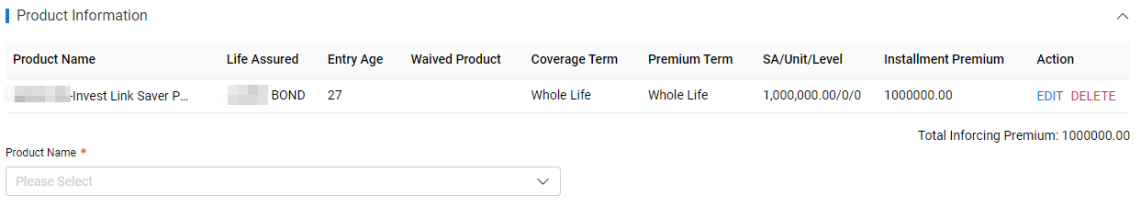

3. Select or input compulsory field values in the main product section, then click **Add**.

note

- For CB, a **Pay in Cash** option is available.
- For SB, Pay in Cash, Annuity, Variable Annuity, Fund Coupon, etc. are optional. Additionally, the system supports inputting the disbursement method at the product level.

Step Result: Main product is updated to the table. Declaration information is generated.

Figure 27. Updated Main Product

Add Additional Riders and Waivers

This task is optional. Once the main product details have been entered, additional riders and waivers can be added if necessary. This topic describes how to add additional riders and waivers in the Product Information section.

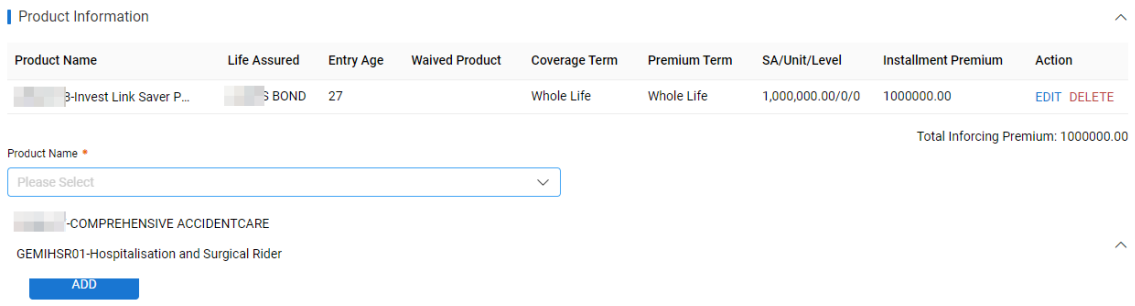

PREREQUISITE

Main product information modification has been finished.

1. In the product information section, upon updating the main product information, the attachable waivers and riders will be filtered. You can then choose from the dropdown list provided.

Step Result: Attachable waivers and riders are in the dropdown list.

Figure 28. dropdown list of waivers and riders

2. Select a waiver or rider. The system will populate fields with default values based on the product definition. Next, select or enter the values for other mandatory fields. Finally, click **Update**.

Step Result: The waiver or rider is updated to the table.

Figure 29. Product information entry page of Hospital Benefit Products

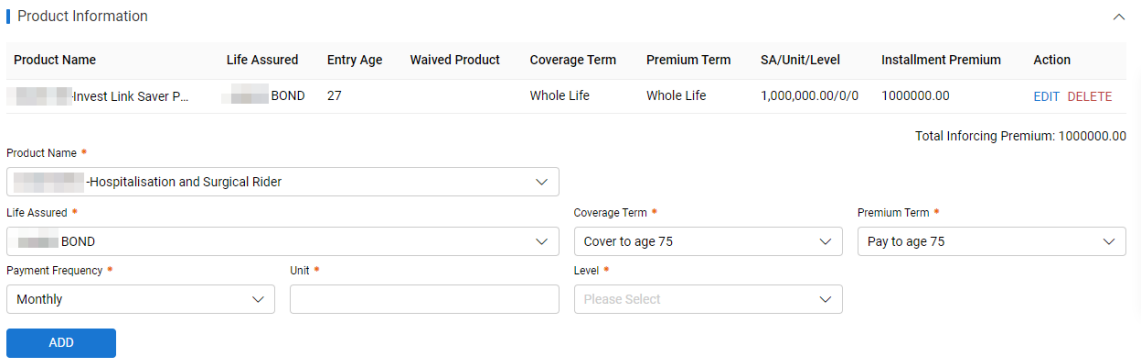

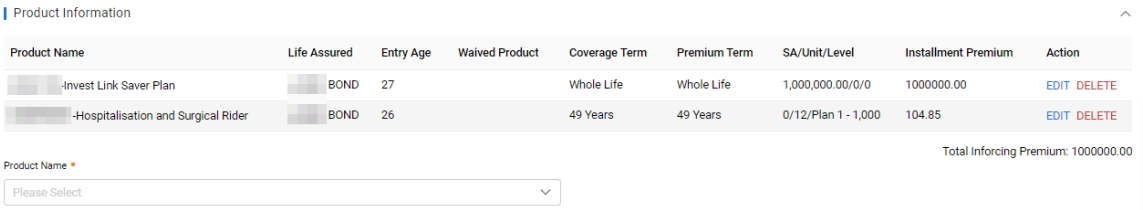

Figure 30. Rider added in product table

3. You can click **EDIT** or **DELETE** for added waivers and riders if necessary.
4. For waiver benefited with the “waiver type = Waive Policy” (WOP), if this kind of waive is attached to the main benefit, system will automatically attach it to other riders.
    - If the 1st WOP is added to the policy , the system checks if the policy has additional riders. If so, the system automatically creates new WOP records for all additional riders.
    - If a new rider is added to the policy, the system checks if the main product has WOP. If so, the system automatically creates new WOP for a new rider.
    - If one WOP is deleted from the policy, the system automatically deletes all WOPs.
5. After the main benefit is added, the system will automatically add the “Embedded Rider” for this main benefit based on these rules:
    - If an embedded rider can match the coverage, payment terms, and sum assured of the main benefit, create the embedded rider with identical conditions.

- If an embedded rider fails to meet the input information requirements of the main benefit but only conforms to a single configuration defined for the product, create the embedded rider based on that single configuration.
- If the configuration of an embedded rider doesn't align with the detailed information or single configuration of the main benefit, the system will not automatically attach the mismatched embedded rider. Instead, it will generate a proposal issue to prompt users to enter the information manually.
- The System will verify whether the embedded riders have been removed from the policy. If so, the system will generate the proposal issue within the proposal issue module.

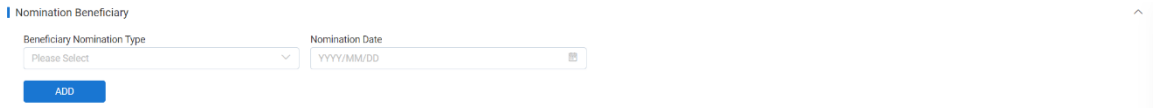

Enter Nomination Beneficiary Information

This topic describes how to enter nomination beneficiary information on the policy information data entry page.

1. On the policy information data entry page, enter or modify the nomination beneficiary information in the **Nomination Beneficiary Information** section.

Step Result: The Nomination **Beneficiary Information** section is displayed.

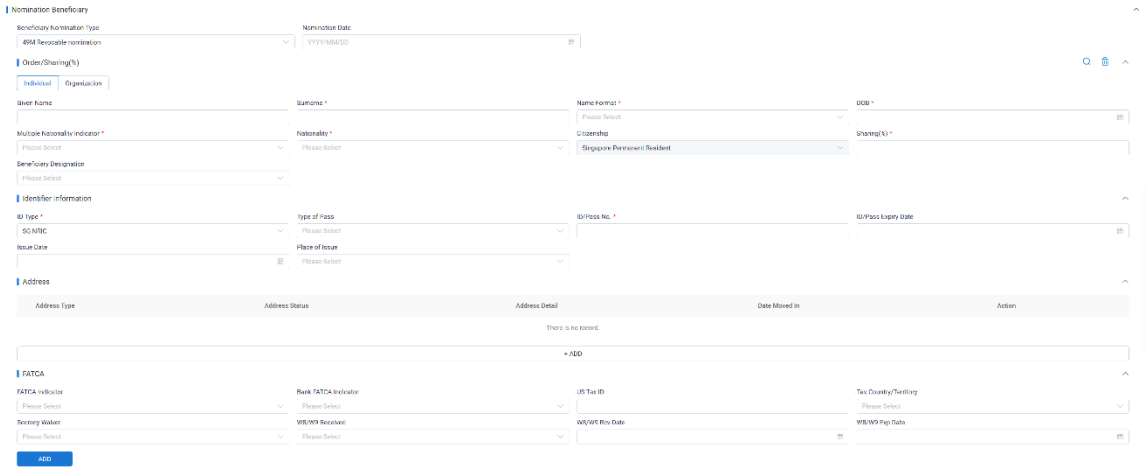

Figure 31. Nomination Beneficiary Information section

2. Select the Nomination Beneficiary Type and Nomination Date.
    - If a valid beneficiary is named in the policy, the nomination type is a mandatory input.
    - If there is a valid beneficiary nomination type, the nomination date field must contain a valid date.
3. Click **add** to add a new nomination beneficiary. Multiple nomination beneficiaries can be added, and sharing percentage can be set.
4. Fill in the nomination beneficiary basic information. The sum of the sharing percentage should be 100%.

Step Result: Completed Nomination Beneficiary information.

Figure 32. Add Nomination Beneficiary Result

Enter Nomination Trustee Information

This topic describes how to enter nomination trustee information on the policy information data entry page.

1. On the policy information data entry page, enter or modify the nomination trustee information in the **Nomination Trustee Information** section.

Step Result: The nomination trustee **Information** section is displayed.

Figure 33. Trustee Information section

2. In the nomination trustee section, click **add** to add a new nomination trustee. Multiple trustees can be added.
3. In the nomination trustee information section, you can select either an individual or an organization as the type of your nomination trustee.

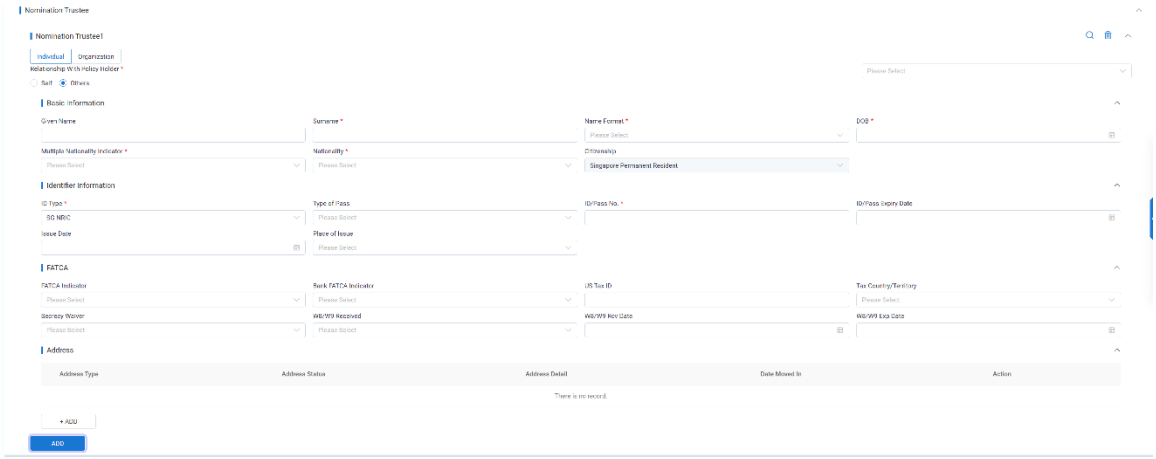

If	Result
Click **Individual**	Individual information panel is displayed.
Click **Organization**	Organization information panel is displayed.

Step Result: The Individual/Organization nomination trustee information panel is displayed.

4. Fill in the basic trustee information.

Step Result: The system records the policy-related party information and displays the party records in the Underwriting/Common Query section.

Figure 34. Add Nomination Trustee Result

Enter Beneficial Owner Information

This topic describes how to enter beneficial owner information on the policy information data entry page.

1. On the policy information data entry page, enter or modify the beneficiary owner information in the **Beneficial Owner Information** section.

Step Result: The beneficial owner **Information** section is displayed.

Figure 35. Beneficial Owner Information section

2. In the Beneficial Owner section, click **add** to add a new beneficial owner.
3. In the beneficial owner information section, either an individual or an organization can be selected as the beneficial owner type. Multiple Beneficial Owners can be added.

If	Result
Click **Individual**	Individual information panel is displayed.
Click **Organization**	Organization information panel is displayed.

Step Result: The Individual/Organization beneficial owner information panel is displayed.

If the “Relationship with Policy Holder = Self”, the system will automatically populate the related Policy Holder (PH) information in read-only mode.

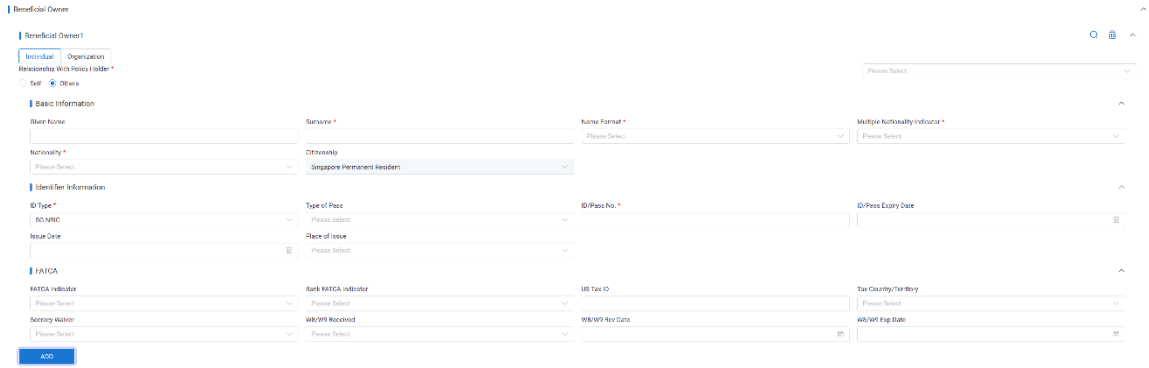

If the “Relationship with Policy Holder = Others”, the system will present a relationship dropdown list for selection.

Other required fields are consistent with those for other individual or organization customers.

4. Fill in the basic information of the beneficial owner.

Step Result: The system records the policy-related party information and displays the party records in the Underwriting/Common Query section.

Figure 36. Add Beneficial Owner Result

Enter Trusted Individual Information

This topic describes how to enter trusted individual information on the policy information data entry page.

1. On the policy information data entry page, enter or modify the trusted individual information in the **Trusted Individual Information** section.

Step Result: The trusted individual **information** section is displayed.

Figure 37. Trusted Individual Information section

2. In this section, click **add** to add a trusted individual. Multiple trusted individuals can be added.

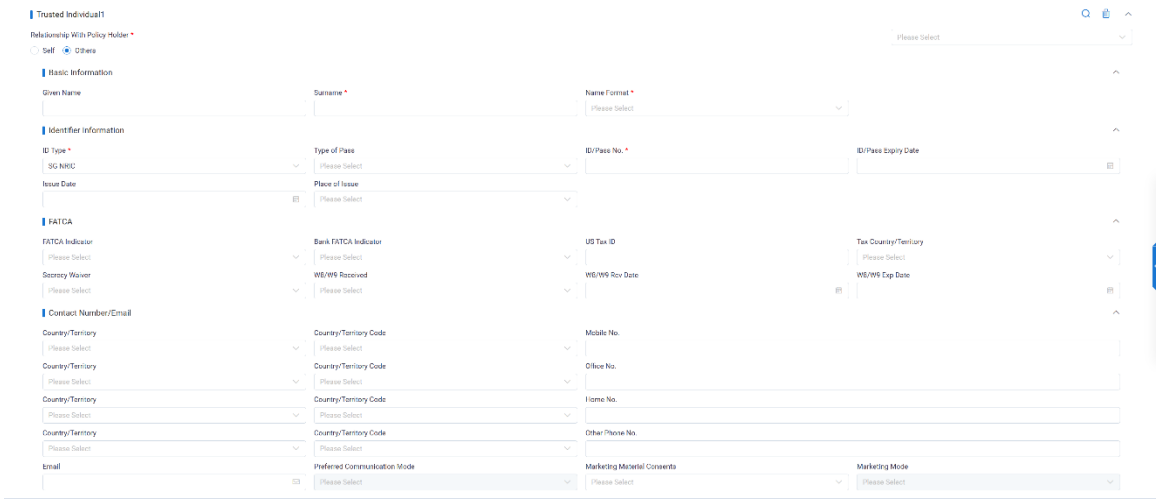

3. In this section, you can choose an individual as the trusted individual.

- If the “Relationship with Policy Holder = Self”, the system will automatically populate the related Policy Holder (PH) information in read-only mode. If the policy holder is an organization, this option will be disabled.
- If the “Relationship with Policy Holder = Others”, the system will display the relationship dropdown list for selection.
- Other required fields are the same as those for other individuals. The fields for trusted individual will cover the following sections: Basic Information, Identifier Information, Contact Number/Email.

4. Fill in the trusted individual information.

Step Result: The system records the policy-related party information and displays the party records in the Underwriting/Common Query section.

Figure 38. Add Trusted Individual Result

Confirm Declaration Information

This topic describes how to submit declaration information and how to configure declaration question and declaration form.

Submit Declaration Information

PREREQUISITE

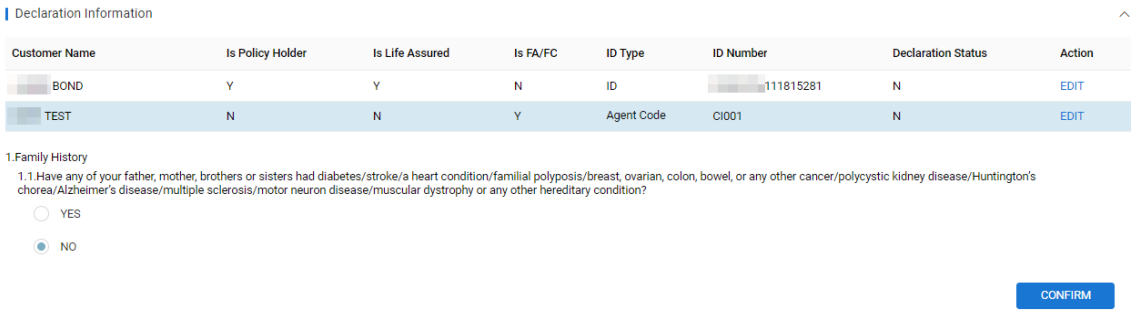

Policyholder, life assured, payer, payment, product information entry is complete.

1. In the declaration information entry section, the life assured and policyholder are listed. Click **Edit** to enter declaration information, then click **Confirm**.

2. Repeat the above operation for each customer on the list.

Step Result: The Declaration Information is submitted.

Figure 39. Declaration Info Section

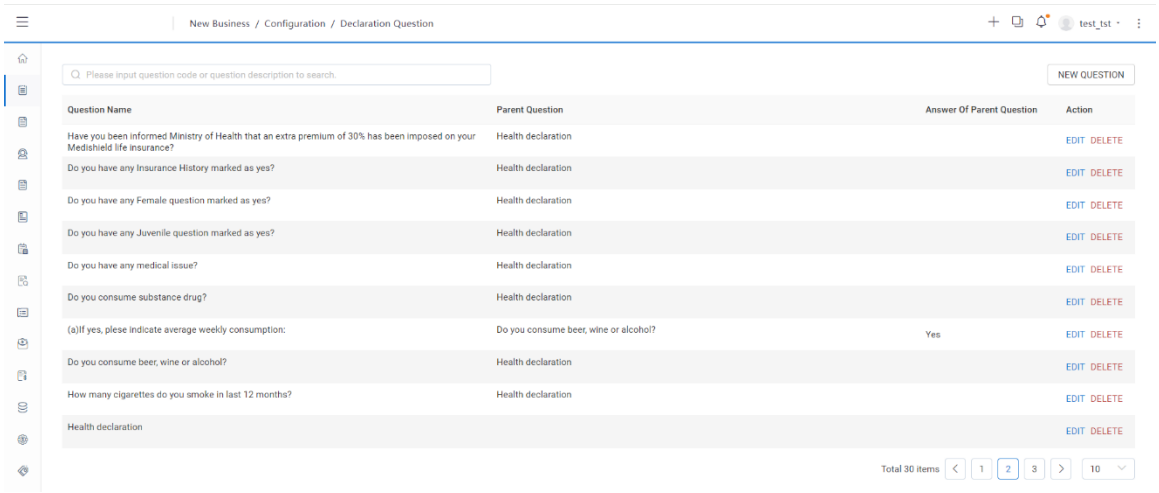

Configure Declaration Question

This section describes how to configure declaration question.

1. On the left menu bar, click **New Business > Configuration > Declaration Question**

Step Result: The Declaration Question page is displayed.

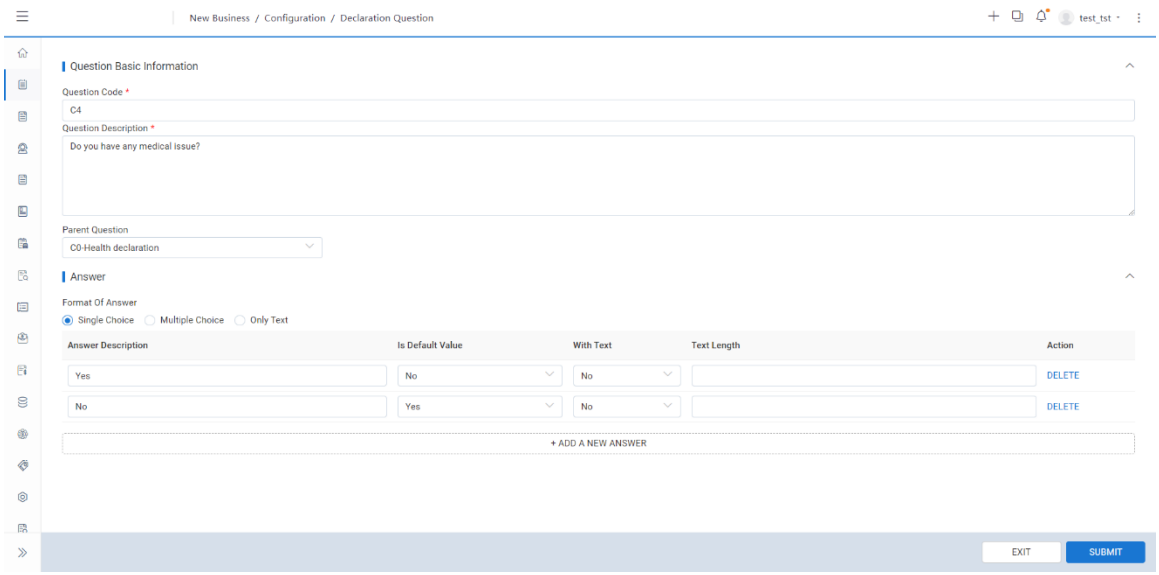

Figure 40. Declaration Question Configuration Page

2. You can choose to **Edit** or **Delete** existing questions. Or you can click **New Question** to create a new question.

Step Result: If the **edit** or **add** icon is clicked, the question configuration page will be displayed.

Figure 41. Question Info Page

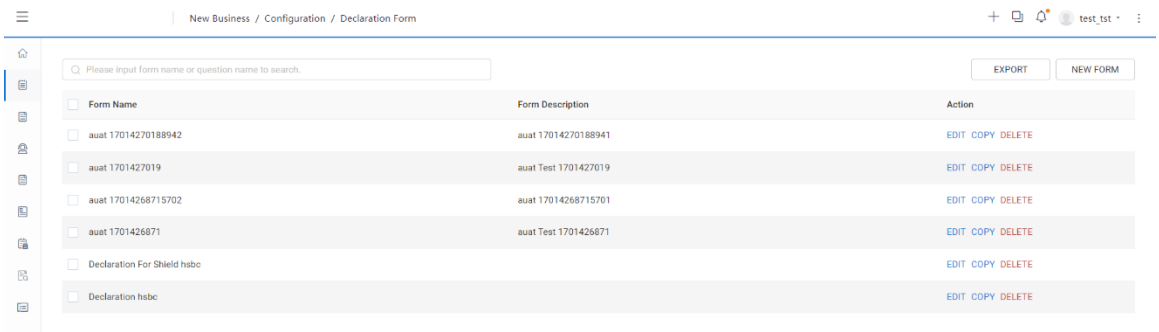

Configure Declaration Form

This section describes how to configure the declaration form for different products and different role in policy. A configuration table named **Declaration Form Mapping** is utilized to associate declaration forms with products and roles.

1. On the left menu bar, click **New Business > Configuration > Declaration Form**

Step Result: The Declaration Question page is displayed.

Figure 42. Declaration Form Configuration Page

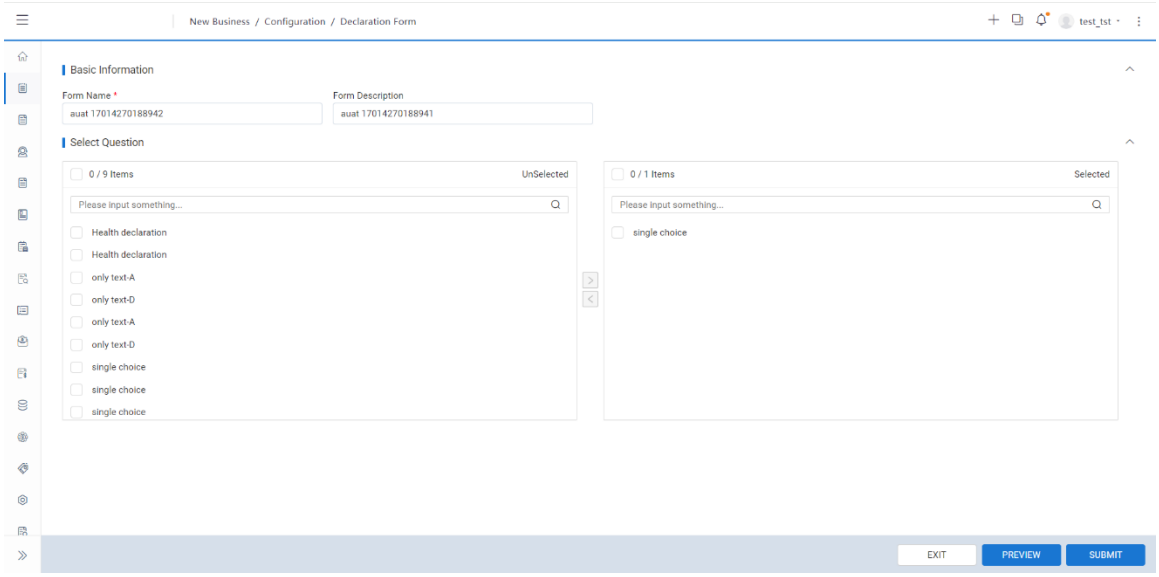

2. You can choose to edit, copy, delete, export or add a form.

If click	Action
Edit	Navigate to the form configuration page to modify the information of an existing form.

If click	Action
Copy	Duplicate an existing form and adjust its details to efficiently create a form similar to the original one.
Delete	Remove the existing form.
Export	Transfer the selected form(s) to your computer.
New Form	Create a new form.

Step Result: The form configuration page is displayed.

Figure 43. Declaration Form Configuration Page

3. Input the form name and form description. Select the questions to be included in the form. You can reorder the selected questions by dragging them up or down in the selection window.
4. (Optional) Click **Preview** to preview the form.
5. Click **Submit** to create the form.

Validate Policy Information

This topic outlines the subsequent actions after completing the entry of policy information.

PREREQUISITE

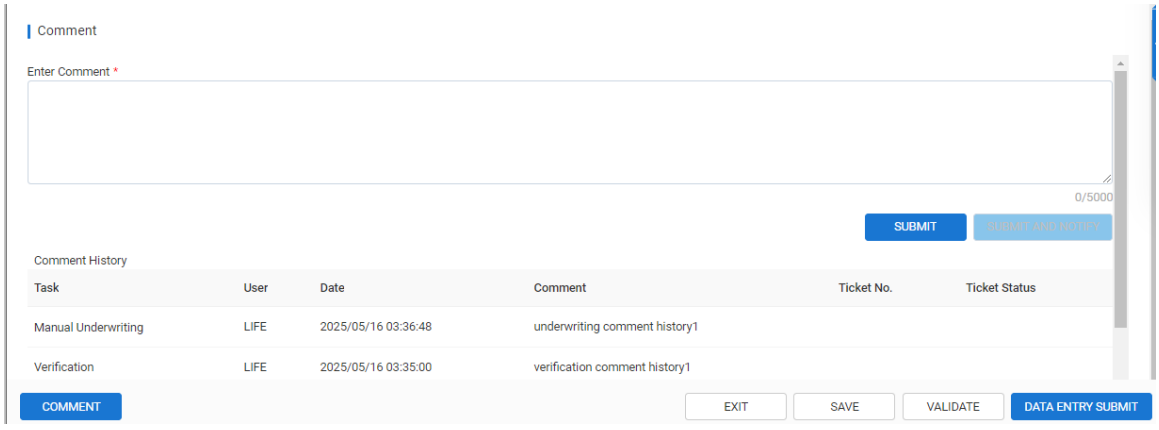

- All policy-related information must be fully entered, covering basic details, policyholder information, life assured details, payer information, payment method details, product information, nomination beneficiary details, nomination trustee details, beneficial owner information, trusted individual information, and declaration information.

Actions:

You can choose to click **Comment**, **Validate**, or **Data Entry Submit**.

If Click	Action
Comment	Leave comments on the current new business case or view the comment history. history. - In the Comment section, users can mark comments as sensitive or non-sensitive. - In the Comment History section, users can review comments submitted throughout the new business process.
Validate	The system automatically checks for any proposal issues, which can be reviewed and checked under the **Outstanding Issue** tab.
Data Entry Submit	Click the button after completing information entry under all tabs. The system will then conduct a check.

Figure 44. Comment

Check Proposal Issues

This topic describes how to review proposal issues on the Proposal Issue page. It also covers the functionality to add new proposal issues and generate letters.

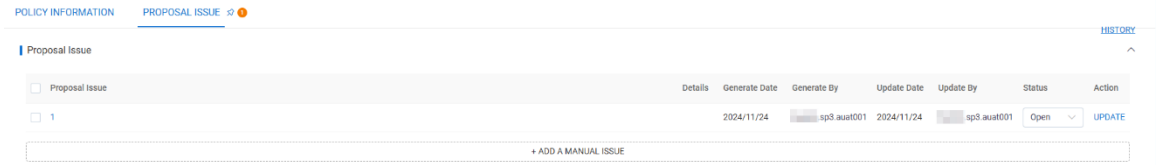

PREREQUISITE

Policy information has been fully entered and validated.

1. On the data entry page, click **Proposal Issue** to review the proposal issues.

Step Result: The Proposal Issues page is displayed.

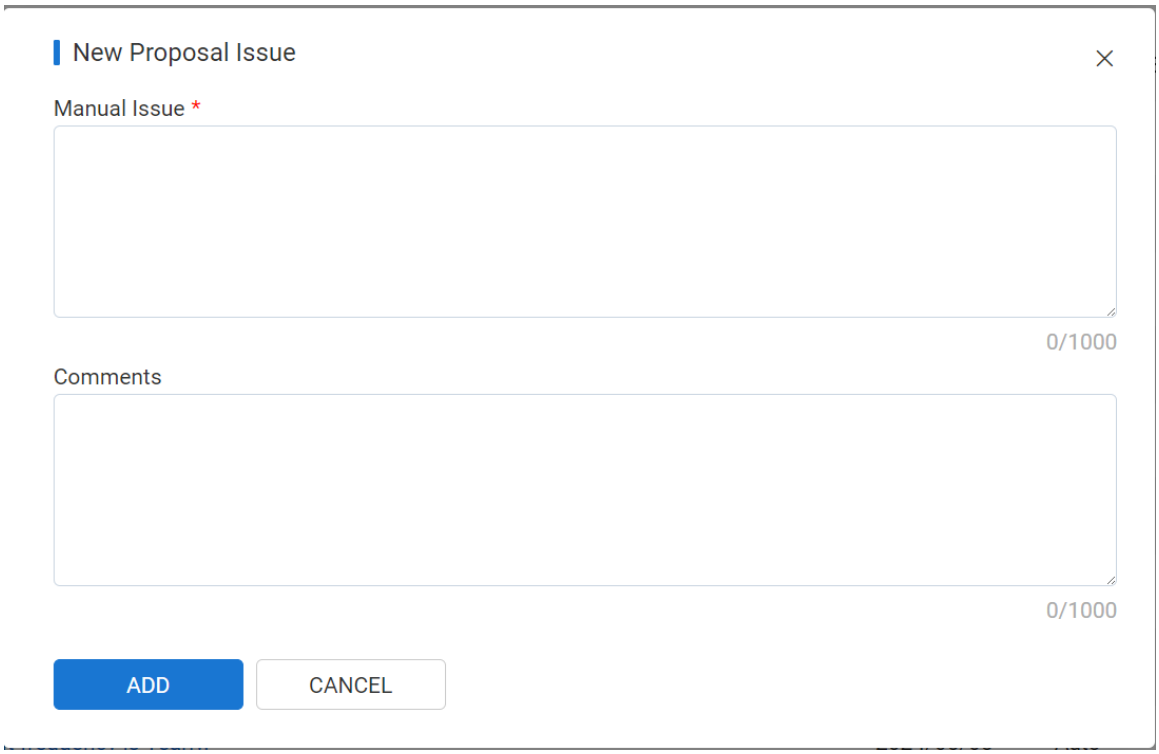

Figure 45. Proposal Issue Page

2. On the Proposal Issues page, users can take the following actions:

If	Action
When there are proposal issues	- Navigate to the **Proposal Issue** tab. the **Proposal Issue** tab, review the issues and follow up based on the issue details. - For proposal issues triggered by auto-proposal rules, once resolved, the system will automatically update the issue status to “Deleted” Status. - For manually added issues, users can manually “ignore” or “close” the issue.
When a new proposal issue needs to be added	- On the Proposal Issues page, click **Add** . In the pop-up window, enter the manual issue and its comment, then click **Confirm**. The issue will be added to the issue table and subsequent operations can be carried out as described above. - Click **Update** to confirm any changes made.

Figure 46. Add a manual issue

Submit the Proposal

This section describes related concepts about proposal submission.

PREREQUISITE

The pending reason field should be empty. Declaration information needs to be submitted. Query letters for proposal issues marked as “Need Reply” must be replied to, discarded, or deleted.

1. Once all the above steps are completed, click **Data Entry Submit** at the bottom right corner of the policy information page.
2. System will then perform multiple checks.

If	Action
On the Policy Information entry page, there is a compulsory field not filled.	Error message is displayed.
On the Policy Information entry page, in the beneficiary section, the	Error message is displayed.

If	Action
sum of sharing percentage is not 100%.	
Declaration Information is not submitted.	Error message is displayed.
The pending cause is not empty.	Error message is displayed.
A query letter that needs reply has not been replied to, deleted, or discarded.	Error message is displayed.
No errors are detected.	Confirm the submission. Once submitted successfully, the proposal status will update to **Waiting for Verification**. You can click **Go Back** to Worklist.

View Proposal Transaction History

This is an optional operation. You can review the transaction history of the proposal by clicking **HISTORY** at the top right corner of the entry page. The history record table details the tasks performed, along with their start times, end times, the operating user, the user's branch, and any relevant comments.

Figure 47. View Proposal Transaction Page

Proposal Transaction History

Task	Start Time	End Time	User	User Branch	Remark
Data Entry	2024/11/28 10:42:40		[redacted].sp3.auat001	AUAT_1	
Initial Registration	2024/11/28 10:42:24	2024/11/28 10:42:24	[redacted].sp3.auat001	AUAT_1	

Verification

This topic explains related concepts about verification.

Once the detailed registration process is finalized, verification can be initiated to detect any errors that may have occurred during data entry. In the event that incorrect information is identified, the proposal can be remanded to the data entry stage for correction.

Search Verification Task

This topic describes how to search out the proposal to be verified.

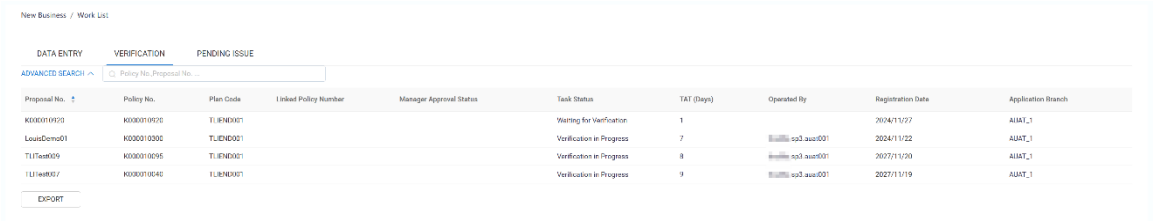

PREREQUISITE

The proposal must have been transferred to the verification stage by the workflow management system, with its status set as either Waiting for Verification or Verification in Progress.

1. From the main menu, select **New Business > Work List > Verification**.

Step Result: The Verification Search page is displayed.

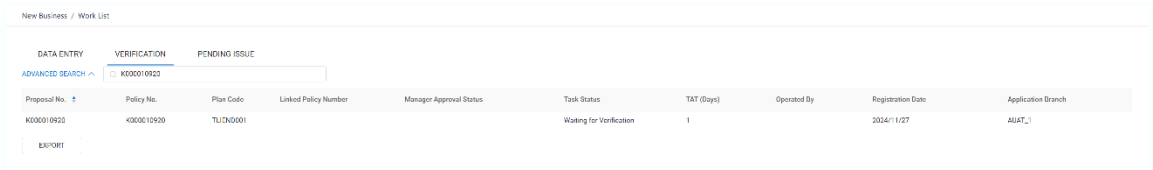

Figure 48. Verification Search Page

- Set search criteria under the **Verification** tab, and then click **Search**.

Step Result: The matching result is displayed on the **Search Result** table.

Figure 49. Verification Search Result

Verify Information

This topic describes related concepts about verification of policy information.

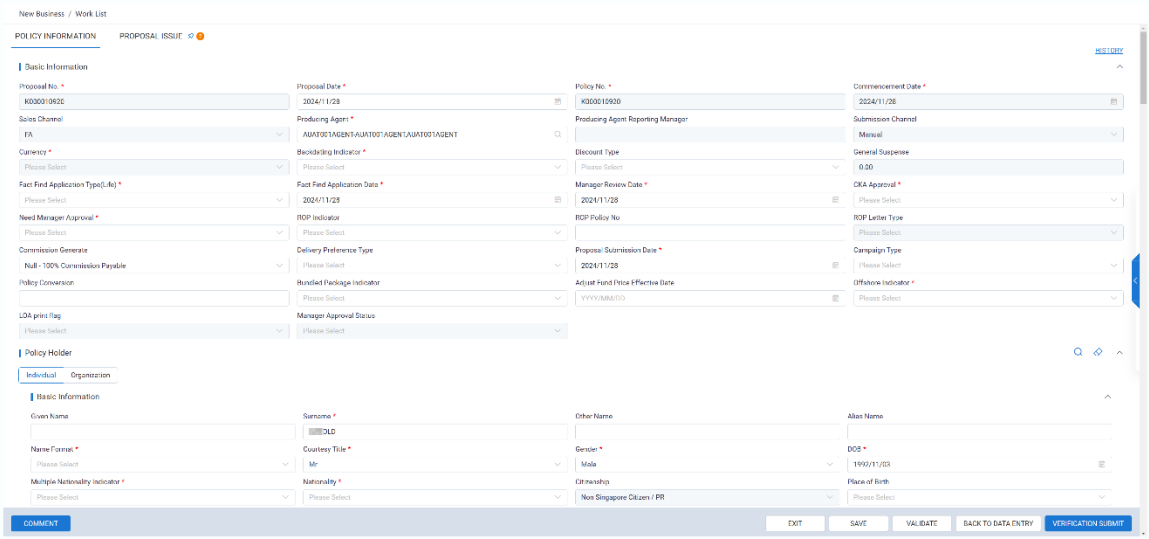

PREREQUISITE

The data entry process must be completed, and the application status should be either Waiting for Verification or Verification in Progress.

1. On the verification search page, locate the proposal and enter the verification page.

Step Result: Verification page is displayed.

Figure 50. Verification page

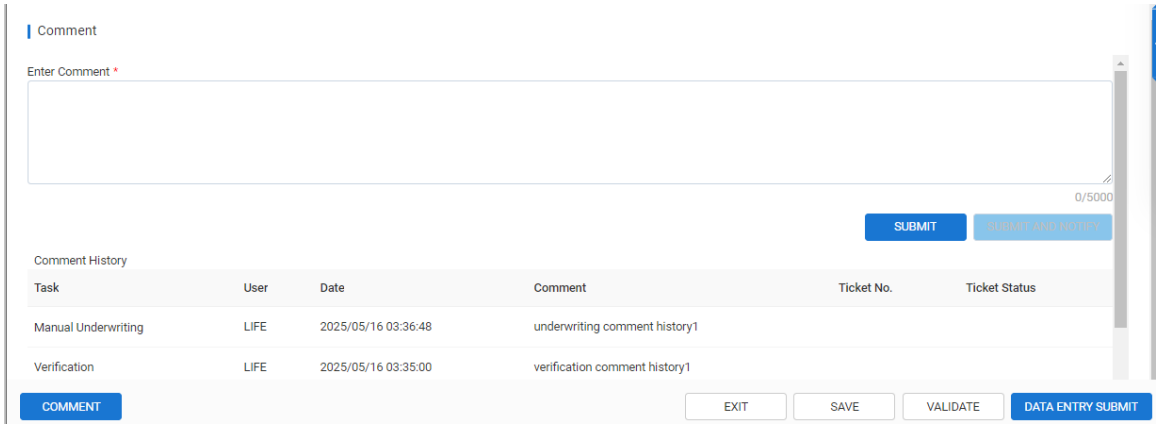

note

The layout of the verification work page and its tabs mirrors that of the data entry page. All fields can be accessed in the same way as during the data entry process.

2. If information needs to be modified, you can make the changes directly on the verification page and click **Save**. Alternatively, clicking **Back to Data Entry** will return the proposal to the data entry page.

3. If necessary, leave a comment by clicking **Comment** in the bottom bar. You can also view history comments.

Figure 51. Comment Window

Recheck the Proposal

This topic describes the outcomes of recheck on the proposal information automated by the system upon clicking **Verification Submit**.

PREREQUISITE

This task is initiated by clicking **Verification Submit** on the verification page.

1. Once the preceding steps are completed, click **Verification Submit**.
2. The system then rechecks the proposal information, and the results are presented accordingly.

If	Then
There are underwriting issues.	The workflow routes the proposal to the underwriting module, and the proposal status changes to Waiting for Underwriting.
There are no underwriting issues.	The proposal is accepted automatically.
There are rejection issues.	The system declines the proposal automatically.

Pending Issue

This topic covers concepts related to proposals that are awaiting issuance.

When a proposal is accepted or conditionally accepted but not issued for certain reasons, it will be added to the pending issue worklist, enabling users to monitor it.

Search Pending Issue Task

This topic explains how to locate proposals that are pending issuance.

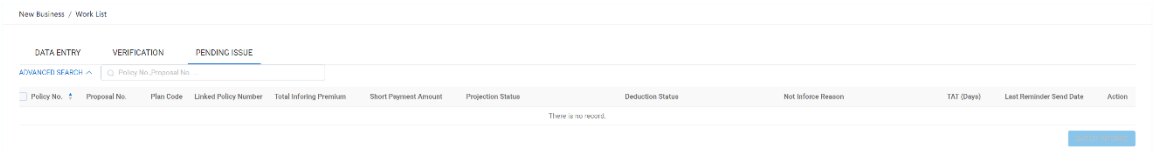

PREREQUISITE

The proposal must have completed underwriting with an underwriting decision of either accepted or conditionally accepted. However, it has not been put into effect due to specific reasons.

1. From the main menu, select **New Business > Work List > Pending Issue**.

Step Result: The Pending Issue Search page is displayed.

Figure 52. Pending Issue page

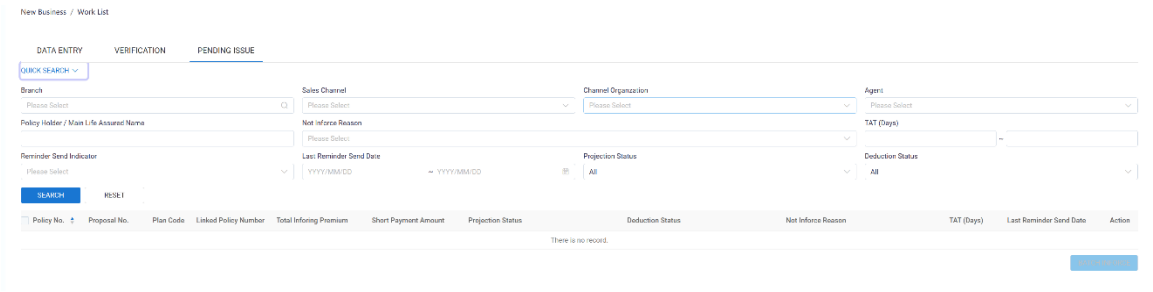

2. Set search criteria under the Pending Issue tab, and then click **Search**.

Step Result: The matching result is displayed on the Search Result table.

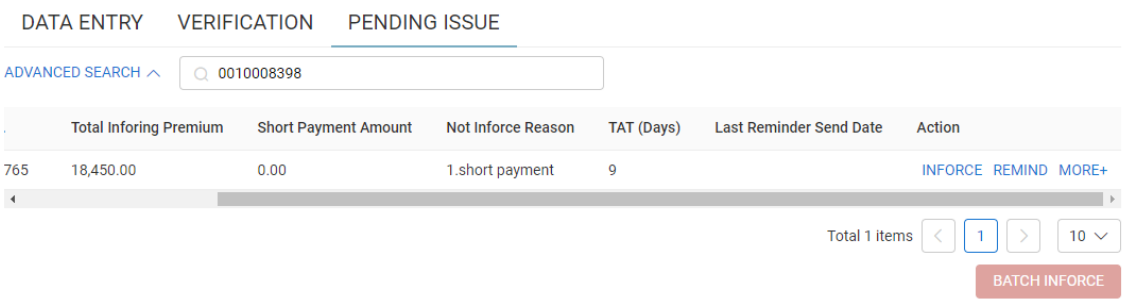

3. For advanced search, there are more search criteria besides proposal number and policy number.

Figure 53. Search Criteria of Advanced Search

4. After searching out the target policy, the user can choose to do the next three actions which are “Inforce, Remind and More”.

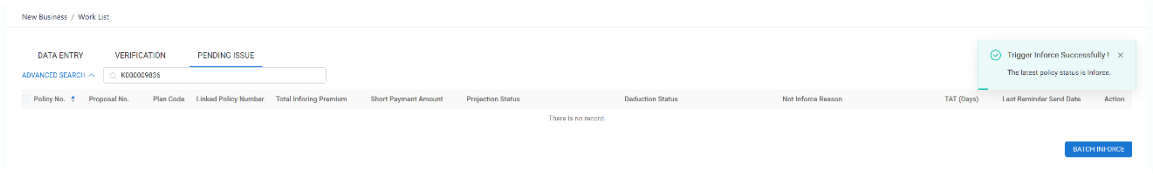

Figure 54. Action Page

- For the **INFORCE** button, in cases where, despite all policy conditions being met, a special policy requires manual enforcement, users can click **INFORCE**. The system will then call the inforce API to trigger the enforcement process.

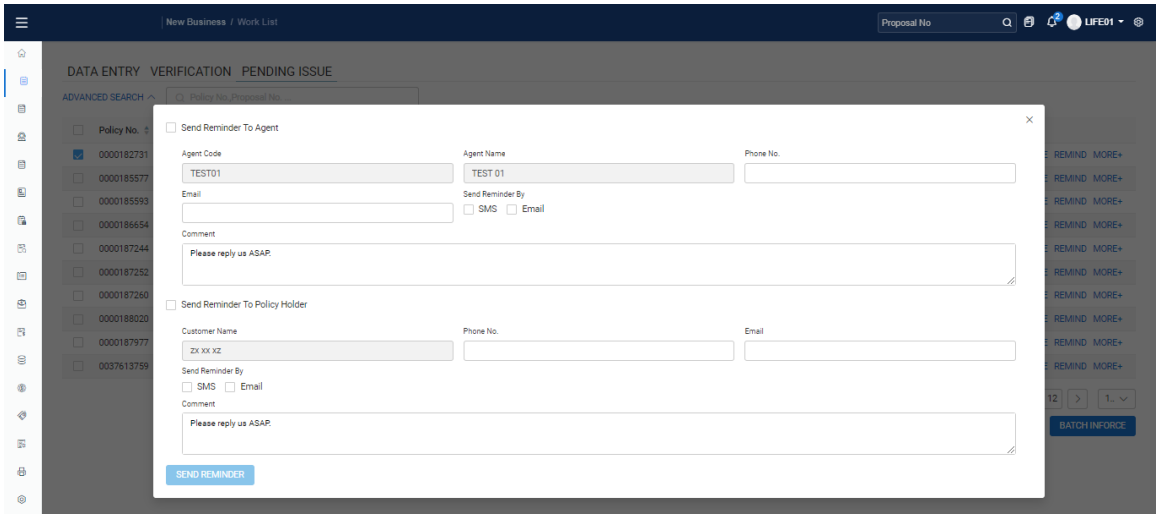

Users can also select multiple records in the table and click **BATCH INFORCE** to initiate the enforcement process for the selected records.

Figure 55. Inforce Page

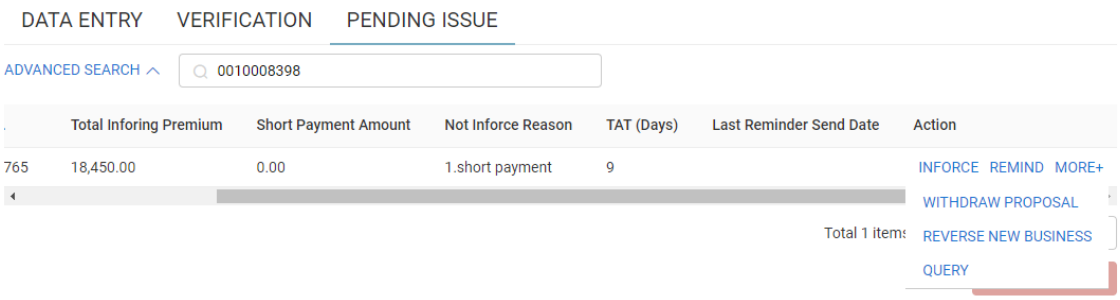

- When the user clicks **REMIND**, the system will pop up a window as below so that you can input the comment. After that, by clicking **SEND REMINDER**, the system will send the reminder to agent or policy holder.

Figure 56.Send Remind Form

- When the user clicks **MORE**, more actions that users can take are displayed, such as withdrawing the proposal, reversing new business, and querying. By clicking on these buttons, users can navigate to the corresponding functional pages.

Figure 57. More Actions Page

If	Result
Click **WITHDRAW PROPOSAL**	The proposal is automatically retrieved on the Withdraw page, enabling the user to initiate the withdrawal process.
Click **REVERSE NEW BUSINESS**	The proposal is automatically located on the Reverse page, allowing the user to execute the reversal process.

If	Result
Click **QUERY**	The system opens a new screen to show the proposal's detailed query information from NB Query.

Underwriting

The underwriting workbench is a centralized platform that can handle underwriting tasks originating from new business, customer service, claims, and even renewals.

For more details, see *UW User Guide*.

Collection

Prior to a policy becoming effective, the Total Inforcing Premium must be collected. Here is one of the mandatory requirements for policy enforcement.

Once a policy/quotation number is generated during the Registration process, funds can be collected at any stage of a New Business proposal, but this must be completed before the policy is enforced.

Inforce

This topic explains concepts associated with enforcing a proposal.

An accepted or conditionally accepted proposal will come into effect upon passing the necessary validation checks. These validation checks are automatically triggered following underwriting, consent or health warranty updates, waiver of due interest, or premium collection.

Inforce a Proposal

This topic describes how to inforce a proposal.

PREREQUISITE

- The proposal must be in the status of Accepted or Conditionally Accepted.
- The health warranty should still be valid (not expired).
- If the benefit can't take effect without premium payment, the full premium must be collected.
- For conditionally accepted proposals, the customer's consent must be obtained.
- No overdue premium interest or premium interest has been paid or waived.

- Enforcing process is triggered under any of the following conditions:
    - For conditionally accepted cases, when the **Consent Received Indicator** is updated to Y.
    - Direct Debit account is updated if renewal payment method is Direct Debit.
    - Once underwriting is complete and the proposal status is Accepted.
    - When overdue interest is being waived.
    - When Payment collection is cancelled (due to dishonoured cheque, etc.) yet the balance of amount is sufficient to re-inforce the proposal.
- The system runs a batch job to check if the following auto-enforcing criteria are met. If all criteria are satisfied, the proposal will be in force. If not, the proposal status remains unchanged. The criteria are:
    - The proposal status is either Accepted or Conditionally Accepted.
    - The **Consent Given Indicator** is Y.
    - For monthly payment frequency, the Direct Debit account number must be available.
    - The premium is fully paid within the tolerance limit and there is a debit agent account for short-term payment.
- The system sets the Inforcing Date which is the Latest Date among the Consent Given Date, Effective Date of Full Payment, Direct Debit Date, and LCA Date.
- The system updates the commencement date based on the inforcing date.
- The system recalculates the age of the life assured based on the commencement date.
- The system changes the commencement date.

If	Then
The main benefit auto-backdate indicator is Y, the main benefit First of	The system changes the commencement date to the DOB - 1. For single life assured case: The system changes the commencement date to DOB of life assured - 1. For multiple life assured case: The system changes the

If	Then
month is N, and age increase occurs.	commencement date to the earliest date of DOB of life assured - 1.
The main benefit auto backdate indicator is N, the main benefit First of month is Y.	The commencement date is the first day of the month.

- The system recalculates the proposal premium.
- The system updates the proposal information.
- The system generates fund transaction application for investment product.
- The system inserts and updates fee records.
- The system refunds premium if applicable.
- The system generated policy documents.
- If the Generate LCA Indicator is Y, the system generates LCA. After generating LCA, the system sets Generate LCA Indicator to N.
- The system records the current supervisor hierarchy of the service agent.

Reversal and Withdrawal

This section pertains to reversal and withdrawal. Users are permitted to cancel a proposal either during the new business proposal stage or even after policy issuance.

This section introduces how to cancel New Business proposals at different stages.

Withdraw Proposal

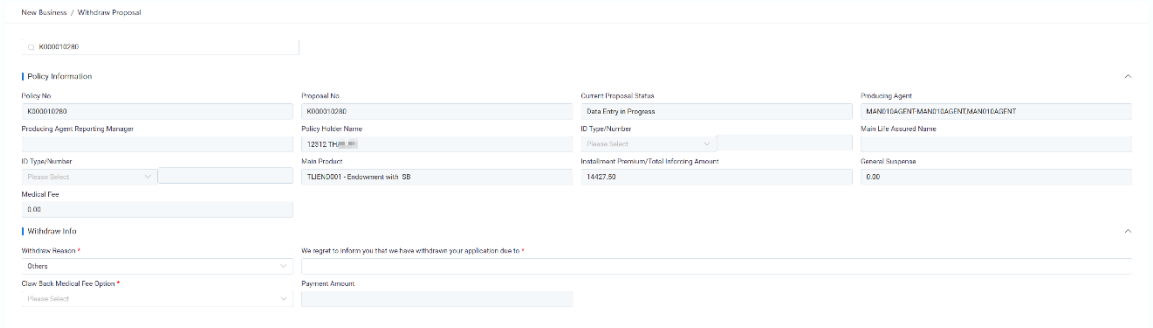

This topic describes how to withdraw a policy manually using the Withdraw Proposal menu. Additionally, the system has a functionality to automatically withdraw proposal to fulfill predefined criteria.

PREREQUISITE

- The proposal status is not Withdrawn, Inforce, Postponed, Declined, or other renewal policy status and refund payee is determined.
- From the main menu, select **New Business > Withdraw Proposal**.

Step Result: The Withdraw Proposal page is displayed.

Figure 58. Withdraw Proposal page

- On the Withdraw New Business page, enter the policy number or proposal number, and then click **Search** to display the basic information of this proposal.

note

Only the policies/proposals from organizations you have access to can be searched out.

1. In the **Withdrawal Information** section, complete required info, and then click **Submit**.
2. Once the withdrawal is processed, the system will automatically generate a payment record with payment status = Temporary Fee Status For Approval.

Reverse New Business

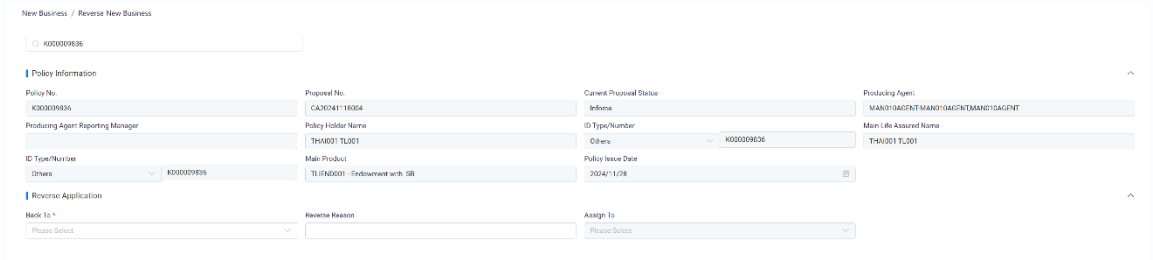

This topic explains how to reverse new business with reverse new business menu.

PREREQUISITE

- The policy status must be one of: withdrawn, declined, postponed, accepted, conditionally accepted, or inforce.
- The policy is not frozen by Customer Service (CS) or claims.
- The policy has no CS or Claim history.
- The policy has not been renewed or is not in the renewal progress.
- The policy has no pending financial transactions.
- From the main menu, select **New Business > Reverse New Business**.

Step Result: The Reverse New Business page is displayed.

Figure 59. Reverse new business page

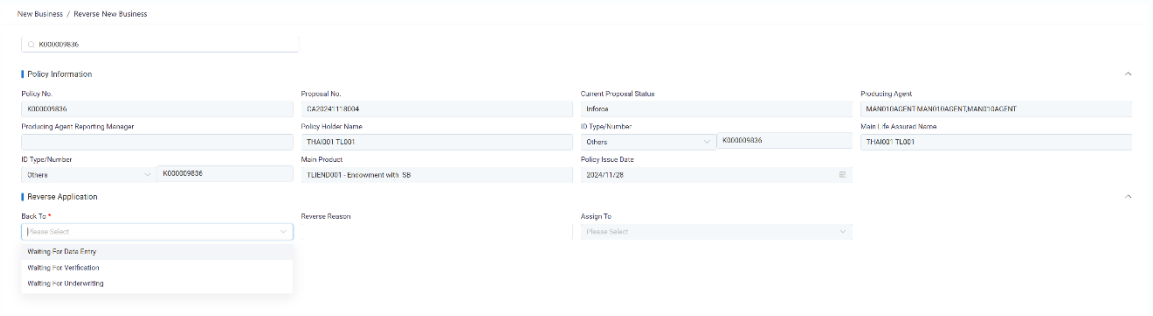

- On the Reverse New Business page, enter the policy number or proposal number, and then click **Search** or **Enter** to display the basic information of this policy.

note

Only the policies/proposals from organizations you have access to can be searched out.

Figure 60. Change Policy Status of Inforce Policy

- In the Reverse Application section, select Waiting for Data Entry/Waiting for Verification/Waiting for Underwriting from the **Proposal Status** list, enter the reversal reason if you want, and then click **Submit**.

Step Result: The proposal will be sent to the selected workflow and the proposal status will be updated accordingly.

If	**Then**
Policy status is **Inforce**	Can go back to **Data Entry** or **Verification** or **Underwriting**

If	Then
Policy status is **Accepted or Conditionally Accepted**	Can go back to **Data Entry** or **Verification** or **Underwriting**
Policy status is **Postpone or Declined**	Can go back to **Data Entry** or **Verification** or **Underwriting**
Policy status is **Withdrawn** and last workflow is Data Entry	Can go back to **Data Entry**
Policy status is **Withdrawn** and last workflow is Verification	Can go back to **Data Entry** or **Verification**
Policy status is **Withdrawn** and last workflow is Underwriting	Can go back to **Data Entry** or **Verification** or **Underwriting**

- If the premium refund for a withdrawn/declined/postponed proposal has already been paid (or a payable record has already been generated), then after performing reversal, the proposal will need to finish the initial premium collection again.

E-submission Process

The new business workbench can also receive electronic policy from the agent portal or customer portal via e-submission API. The proposal will be routed to a specific workflow according to pre-defined workflow. Here is an example script for e-submission.

New Business Query

This topic describes how to query a proposal/policy.

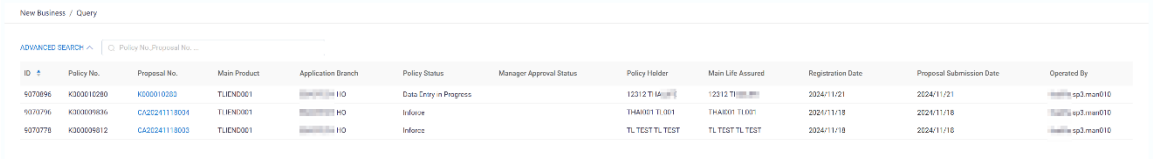

PREREQUISITE

The policy is created in the New Business Workbench

1. From the main menu, select **New Business > Query**.

Step Result: The Query Search page is displayed.

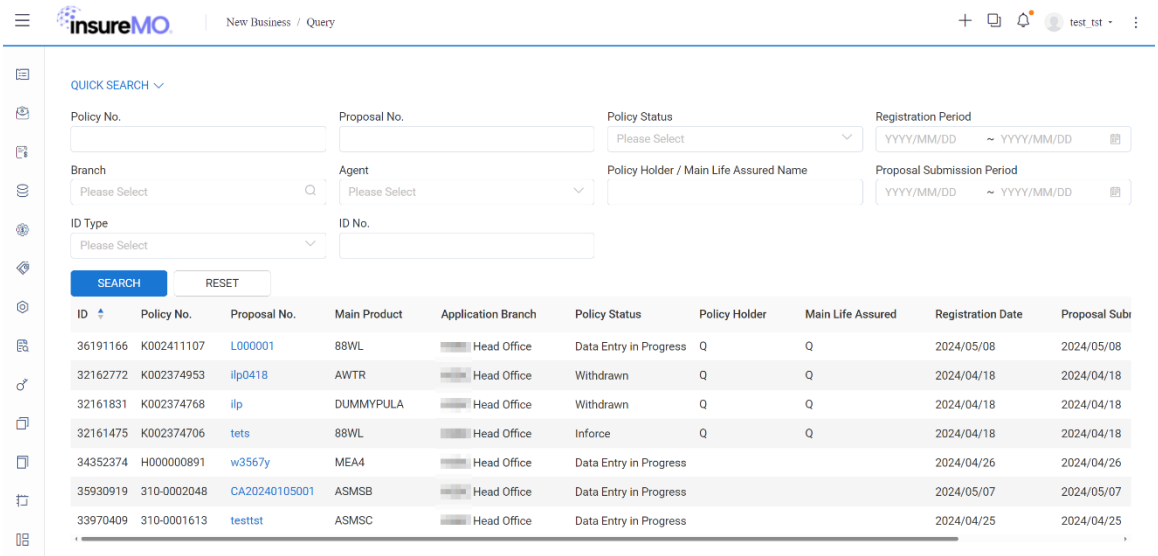

Figure 61. Search page of Query

2. Set criteria and click **Search**.

Step Result: The matching result is displayed on the **Search Result** table.

Figure 62. Search result page of Query

3. Click the hyperlink and you will go to the query page of the proposal.

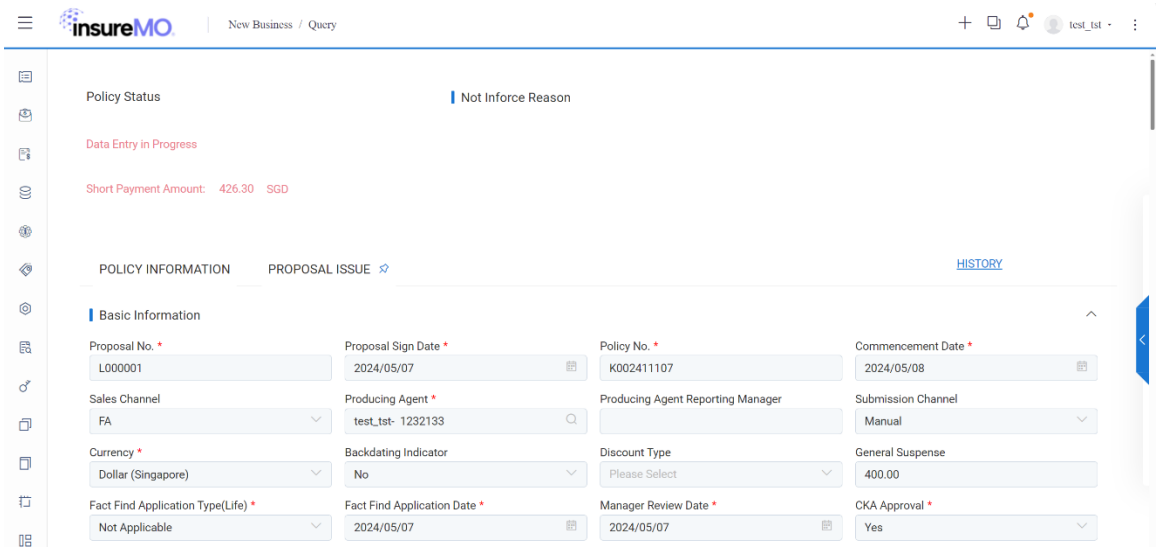

Step Result: The query page is displayed.

note

(1) The fields under **policy information** and **proposal issue** tab are the same as those on Data Entry Page/Verification Page with read-only status. For policies that have been enforced, the information displayed in tabs represents the snapshot data for new business stage. If there are subsequent Customer Service (CS) or claim-related changes to the policy data, the information displayed in tabs will not be changed. Users can access the “Common Query” if they need to query the latest policy data.

(2) For the following fields, the latest data (especially policy status) will be displayed: Policy Status, Short Payment Amount, Not Inforce Reason.

Figure 63. Query Detail page

Watch List

This topic elaborates on concepts related to the New Business Watch List. Using this menu, users can release and reassign tasks generated on the New Business Workbench.

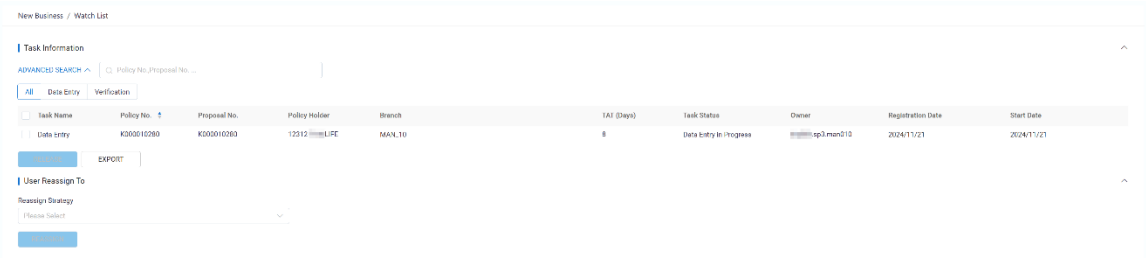

PREREQUISITE

The policy is created on New Business Workbench

1. From the main menu, select **New Business** > **Watch List**.

Step Result: The Watch List page is displayed.

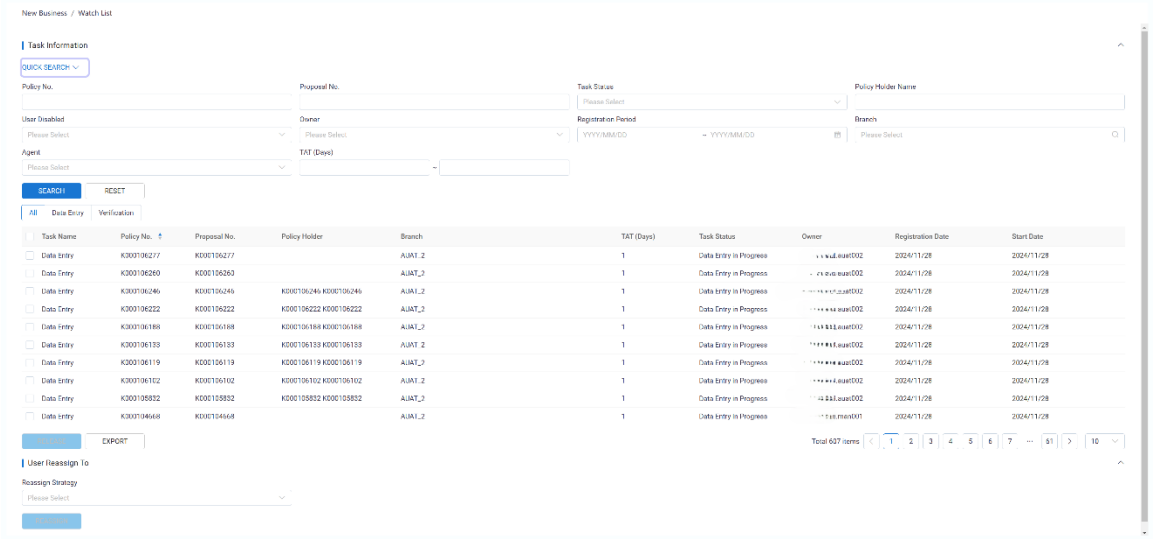

Figure 64. Watch List page

2. Quick search by policy number/proposal number. Or users can set advanced search criteria and click **Search** to search out target tasks.

Step Result: The matching search results are displayed.

Figure 65. Advanced Search Criteria and Results

3. Select target tasks from the result list. Then users can operate accordingly:

Purpose	Required Operation
Release task	Select the tasks, then click **RELEASE**. The released tasks will be available for other users to handle.
Export task	Click **EXPORT**. The system will extract all tasks in the search result table and download them as an Excel report file.
Reassign task	Select the tasks, then choose a reassign strategy: - If **Push** is chosen, the user needs to select another user to reassign the tasks; - If **Task Auto Assign Strategy** is chosen, the selected tasks will be reassigned to another user according to task auto assign strategy.

Table 6 Field Description of Register Initial Information Page

Register Initial Information Page

Field Name	Description
Proposal No.	The unique number entered by the user for each proposal. This field is optional.
Proposal Sign Date	Manually entered by the user or selected via the date picker. Format: YYYY/MM/DD. Rules: Proposal date must be on or before the current system date. Proposal date cannot be more than 12 months earlier than the current system date. Proposal date cannot be earlier than the product launch date.

Field Name	Description
Sales Channel	Automatically displayed after the user inputs the agent code.
Producing Agent	Click **search** and select a code from the table. Search able by agent code or agent name. Requirements: Agent code must be valid. Agent status must be active. Agent must hold valid qualifications to sell the product.
Main Product	Enter the product code/name or select one from drop-down list. The product entered must be the main product. Product Code must be valid. Product must be on sale (i.e., product end date > submission date). Agent entered must hold valid qualifications to sell this product. If the agent is “Individual Agent” or “Company Direct”, agent branch must be allowed to sell this product. If the agent is not “Individual Agent” or “Company Direct”, agent branch must have an agreement with the insurance company to sell this product.
Currency	Select currency from the list.
Proposal Submission Date	Select proposal submission date.
Submit	After all mandatory information is entered, click **Submit**. Then, the policy number will be generated, and the proposal will be assigned to data entry users.

Table 7 Field Description of Basic Information Section

Basic Information Area

Field Name	Description
Proposal No.	Entered at initial registration and cannot be changed manually.
Proposal Sign Date	Entered at initial registration and editable manually. Proposal sign date must comply with the following rules: - Not earlier than the product launch date. - Not later than the registration date - Not more than 12 months earlier than the current system date.

Field Name	Description
Policy No.	Generated at initial registration and cannot be changed manually.
Commencement Date	Default to the Submission Date, but can be changed manually. Restrictions: Commencement date cannot be later than the current system date. Commencement date can be backdated is allowed only if: - The backdating indicator of the benefit is Y in the product definition. - The backdating period defined in the product is not exceeded. **[note:]** If backdating days exceed 183, the system will calculate overdue interest on the total enforcing premium.
Sales Channel	Retrieved from initial registration and cannot be modified.
Producing Agent	Selected at initial registration and can be changed manually.
Producing Agent Reporting Manager	Sales manager of the producing agent, responsible for performing the approval for sales manager review.
Submission Channel	Retrieved from initial registration and cannot be modified. Display Rules: display “Manual” if the proposal is submitted manually; display “e-Mas”, if the proposal is submitted by e-submission.
Currency	Policy currency for this proposal, selected during registration.
Backdating Indicator	Dropdown list. Available options: Yes, No (Default Value). Modification Rule: The indicator can only be set to yes if the product level’s configuration permits backdating. After setting the indicator = Yes, then commencement date will be editable, allowing the user to input a previous date for this date. If the user sets the backdating indicator as “Yes” and changes the commencement date, a warning message will be triggered to inform user to resubmit the benefit entry for premium recalculation.
Discount Type	Enter the discount type code, or double-click this field to select a code from the list. If “Staff” is selected as the Discount Type, the system will validate whether both the policyholder and the

Field Name	Description
	main insured are staff and save the result to non-underwriting issues.
General Suspense	Display the general suspense balance for this proposal. It is the initial premium or other policy fee prepaid and stored in the proposal (before policy takes inforce). For more details, see Finance User Guide for policy suspense account.
Fact Find Application Type (Life)	Fact find is a process of verifying the customer's requirements for insurance product during the sales stage. This is the factor finder type performs. Dropdown list. Available Options: Product Advice, Partial Advice, Full Advice, Not Applicable (default value).
Fact Find Application Date	Date for fact find. Restrictions: This date cannot be a future date, and cannot be later than the proposal sign date.
Manager Review Date	The date for the sales manager to review the proposal. Restrictions: This date cannot be a future date, and cannot later than proposal sign date.
CKA Approval	The CKA （Customer Knowledge Assessment） process is mandatory required by theSingapore regulator. This is the CKA approval result for the proposal. If the policy only contains health (product category = health) or shield product (SG region specific product, product category = shield), this section will be hidden. Dropdown list. Available Options: Yes, No
Need Manager Approval	Indicator on whether the proposal requires sales manager's approval. Dropdown list. Available Options: Yes, No
ROP Indicator	Tag to identify whether this proposal is a "Replacement of Policy". Dropdown list. Available Options: Yes, No
ROP Policy No	Input fields for capturing the original policy number before replacement.
ROP Letter Type	Enable when ROP Indicator = Yes. Dropdown list. Available Options: Customer Declared, Identifies by Ops. You can select the type of ROP.

Field Name	Description
Shield ROP indicator	SG regional specific field applicable to “Shield” product. Display when the product is a shield product (product category = shield). Dropdown list. Available Options: Yes, No (default)
Assign Commission	You can define whether the proposal need to generate commission.
Delivery Preference Type	You can define the policy letter’s dispatch method. Dropdown list. Available Options: - Email: Send the e-policy via email. - Physical Copy: Mail the hard copy policy letter. - Both physical and email: Mail hard copy and email the e-policy. - Hand Delivery: The hard copy policy is delivered by sales people, agents or channels. When you email the e-policy, the policyholder’s email is mandatory to be entered. When you mail the hard copy policy, the policyholder’s mailing address is mandatory to be entered. This new dispatch type takes higher priority over Preferred Communication Method on the party level and only affects the policy documents for specific policy.
Proposal Submission Date	Entered during initial registration and can be changed manually. The date must meet the following rules: - Cannot be earlier than the product launch date. - Cannot be later than the registration date.
Campaign Type	You can select the campaign for this proposal.
Policy Conversion	Includes input fields for you to input info related to policy conversion.
Bundled Package Indicator	Dropdown list. Once you select the content, additional Tagged policy fields will be displayed for you to key in the tagged policy numbers.
Charge Fee Indicator	Dropdown list. Only visible when ILP products are selected. Once selected, the Charge Fee Rate (%) will be displayed so that you can key in the charge fee rate.

Field Name	Description

[Add]/[Update]	Click to calculate premium and then apply the entered information.
Minimum Investment Period	Select from the drop-down list retrieved from the product definition. The Minimum Investment Period(MIP) is only displayed and applied to products that support this feature.
Premium Charge	Select from the dropdown list of allowed charge rate for regular premium defined in the product. If no charge rate defined, this field will be hidden.
Fund Allocation Table (Regular Premium)	-
Delete	On clicking the icon, system will delete the record.
Add	On clicking the button, system will add one new record to the table.
Top up Information	-

Field Name	Description
Single Top Up Section	Single top up is a one-time top up premium paid to the policy fund account.
Premium Charge	Select from the dropdown list of allowed charge rate for STU defined in the product. If no charge rate defined, this field will be hidden.
Fund Allocation Table (STU)	Field description is the same as that of the regular premium. The fund allocation percentage is applied to the single top up premium. When STU amount is entered, default value is set to match the regular premium's fund allocation (modifiable).
Recurring Single Premium Section	Recurring single premium (RSP) is a series of single premium paid to the fund account. Different from recurring top up, the RSP can use a different term and frequency for premium. This section will be displayed when the product supports RSP. When saving the product info, system will check: 1. The entered RSP amount must not be less than the minimum amount defined in the product configuration. If it is, the system triggers a warning. 2. Start date must be equal to commencement date +n installment based on payment frequency (n is a non-negative integer number). Otherwise, system will trigger an error message. 3. Start date cannot be earlier than commencement date. Otherwise, an error occurs. 4. End date must equal to start date + n installment based on payment frequency (n is a positive integer number). A mismatch triggers an error. 5. End date cannot be earlier or equal to start date. Otherwise, an error is thrown. 6. End date cannot be later than coverage end date. A violation triggers an error. 7. The insured's age on "start date" cannot exceed RSP's age limit defined for the product. A breach triggers a warning. **Note:** The age limit for RSP should be defined at the product level. Otherwise, system will throw a warning message. The

Field Name	Description
	start date and end date will automatically reset to default value when commencement date is changed.
Recurring Single Premium Amount	Enter the RSP Amount.
Premium Charge	Select from the dropdown list of allowed charge rate for RSP defined in the product. If no charge rate is defined, this field will be hidden.
Payment Frequency	Select from the dropdown list for payment frequency of RSP
Start Date	Enter the start date and end date for the recurring single premium. When RSP amount is entered, set default value as follow: Start date = commencement date, End date = coverage end date
End Date	-
Fund Allocation Table (RSP)	Field description is the same as that of the regular premium. The fund allocation percentage is applied to the recurring single premium. When STU amount is entered, default value is set to match the regular premium's fund allocation (modifiable).
Recurring Top UP Section	Regular Top Up is a series of additional premium paid on top of the regular premium. This section will be displayed when the product supports RTU.
Premium Charge	Select from the dropdown list of allowed charge rate for RTU defined in the product. If no charge rate is defined, this field will be hidden.
Fund Allocation Table (RTU)	Field description is the same as that of the regular premium. The fund allocation percentage is applied to the regular top up. When RTU amount is entered, the default value is set to match the regular premium's fund allocation (modifiable)

Task Name	Display task name. Task Name can be Data Entry or Verification.
Policy No.	Display policy no.
Proposal No.	Display proposal no.
Policy Holder	Display policy holder name.
Branch	Display branch.
TAT (Days)	Display turn-around time (in days), calculated as current system date — task creation date
Task Status	Display task status.
Owner	Display operator.

Field Name	Description
Registration Date	Display registration date.
Start Date	Display start date of current task status.
RELEASE	Click to release selected tasks.
EXPORT	Click to export all listed tasks.

Table 50 Field Description of User Reassign Section

Field Name	Description
Reassign Strategy	Select a push or task auto-assignment strategy from the dropdown list.
Reassign To	If the Reassign Strategy is set to “Push”, select a user from the list. This field appears only when “Push” is selected as the reassign strategy.
REASSIGN	Click to reassign selected tasks to a target user.

Appendix B: Proposal Rules

New Business Proposal Rules

This section outlines the rules for data entry/verification.

The proposal rules include Data Integrity Check, Non-product Proposal Check and Product Rule Check. These rules are triggered during validating in the Data Entry phase, submitting Data Entry or submitting Verification.

Submission Warning Checks:

1. Check if the policyholder’s email address is empty. If so, a warning message will be thrown.
2. Check if life assured’s age on current date does not match the age on commencement date, and backdate indicator = NO. If so, a warning message will be thrown.
3. Check if life assured’s age on current date + 1 month does not match the age on commencement date, and backdate indicator = NO. If so, a warning message will be thrown.

4. Check the “Last Review Date” for Policy Holder/Life Assured/Payer.

(1) If the “Last Review Date” is blank, a warning message will be thrown.

(2) If the “Last Review Date” < System date - X days, a warning message will be thrown. X is a system-level parameter that can be configured (default setting as X = 30).

5. Check if the PVC (Potentially Vulnerable Customer) Indicator = Yes. If so, a warning message will be thrown to remind users to review the VOS (verification of sales) process.

Submission Rules:

- **Common Proposal Issue Rules**

1. For UL and ILP products, there must be a valid Fund premium apportionment. If the validation fails, system will generate a proposal issue.
2. Check the mandatory fields for basic information of policy are filled. If any of mandatory field is missing, system will generate a proposal issue.
3. Check the mandatory fields for policy holder of policy are completed. If any of mandatory field is missing, system will generate a proposal issue.
4. Check the mandatory fields for each life assured of policy are provided. If any of mandatory field is missing, system will generate a proposal issue.
5. Check the mandatory fields for payment information of policy are filled. If any of mandatory field is missing, system will generate a proposal issue.

note

For different payment methods, mandatory fields vary.

6. Check the mandatory fields for product information of policy are filled. If any of mandatory field is missing, system will generate a proposal issue.

note

For different kinds of products, mandatory fields vary.

7. If policy has Regular Premium/Single Premium/Single Top Up/Regular Top Up, check the mandatory fields for each type of premium with fund information. If any of mandatory field is missing, system will generate a proposal issue.
8. Check the data appropriateness.

9. Agent status must be valid. If the validation fails, system will generate a proposal issue.
10. Total beneficiary/nominee share percentage within same order must be 100%. If the validation fails, system will generate a proposal issue.
11. The sum of premium apportionment/regular top up premium apportionment/single top up premium apportionment of all funds should equal to 100%. If the validation fails, system will generate a proposal issue.
12. The Annual Income of the proposer must be entered. If the validation fails, system will generate a proposal issue.
13. When the “With Level Cover Period” is Y, the Deferred Level Term of Mortgage must not be less than Min Month of Level Period allowed for the product chosen. If the validation fails, system will generate a proposal issue.
14. When the “With Level Cover Period” is Y, the Deferred Level Term of Mortgage must not be more than Max Month of Level Period allowed for the product chosen. If the validation fails, system will generate a proposal issue.
15. If backdating indicator = Y in the policy, check commencement date against main product’s Earliest Date for Backdating in PD. If commencement date is earlier than Earliest Date for Backdating, system will generate a proposal issue. (For SG region, Shield product can override the backdating indicator set at the product level. The product can still perform backdating even if the backdating-allowed indicator = No in the product configuration).
16. If backdating indicator = Y in the policy, check backdating period against main product’s Max Period for Backdating in PD. If backdating period exceeds Max Period for Backdating, system will generate a proposal issue.
17. If rider’s premium term is longer than that of main product, system will generate a proposal issue.
18. If rider’s coverage term is longer than that of main product, system will generate a proposal issue.
19. If the reversal policy deletes the original product, system will generate a proposal issue.
20. The sum of specific riders’ SA must not exceed the SA of main product.

- Rider's configuration: product configuration —> Product additional information —> Sum of SA not greater than Parent SA = Yes
- For these riders, system will sum the riders' SA (based on those attached to the same product) and compare the rider SA with the SA of the product it is attached to. If rider sum SA >= SA of the attached product, system will throw an error message.

21. If SA of accelerating rider equals SA of basic product, attaching 1st party waiver is not allowed.

- Compare the accelerating rider's SA with the SA of the product it is attached to. If the rider SA is > or = basic product's SA. Then perform the checking.
- Accelerating rider is defined in the product configuration. (Product configuration —> NB rules —> LAAR Indicator =Yes.)
- 1st party waiver: The waiver's life assured is the insured person of attached benefit (not PH, payer or spouse)
- **Regional Specific Proposal Issue Rules (Singapore)**

1. Shield product is a specific medical product (eligible for payment via SG social security account) and applies exclusively to Singaporeans. If any product under this policy is a Shield product (Product Category = Shield or Shield Rider), check the field "citizenship" for both the proposer and the insured. Both must be with value as "Singapore Citizen" or "Singapore Permanent Resident". Otherwise, system will generate a proposal issue.
2. If the insured is covered by a Shield product, the "relationship with policyholder" dropdown list must not be selected as "Employer" or "Employee". Otherwise, system will generate a proposal issue.
3. If the insured is covered by a non-Shield product, the "relationship with policyholder" dropdown list must not be selected as "Granddaughter", "Grandson", "Grandmother" or "Grandfather". Otherwise, system will generate a proposal issue.
4. Each insured can only be covered by 1 inforced Shield Main Policy and 1 inforce Shield rider policy. If the insured already has an inforce shield main or rider policy with coverage period overlapped with the current proposal, system will throw an error message. If the insured already has a shield

proposal (not declined\postponed\declined) with coverage period overlapped, system will trigger a waring message.

New Business Enforce Policy Rules

This section specifies the rules in inforce process.

1. When system checks the auto-inforce criteria, the following items must be observed:
    - Premium payment rules:
        - When payment method = cash/cheque/credit card/SSS/deferred benefit account:
        - If suspense premium - total enforcing premium ≥ 0, the system regards the premium as fully paid and the case is deemed to have passed validation.
        - If a pre-defined fixed amount configure in rate table > total enforcing premium - suspense premium > 0, the system regards the premium as fully paid and the case is deemed to have passed validation. A short payment record will be inserted to indicate the Company is waiving it.
        - If validation fails and the case is triggered manually, a Not Inforce Reason of “short payment” will be displayed.
    - For monthly paid policy, the “total enforcing premium” calculation considers the required inforce installment/month.

This inforce installment is configurable. The criteria and sample configuration rate table are as follows:

Product Id	Organ	Payment Method	Installs
Unrelated	Unrelated	Unrelated	2

2. When system updates the commencement date:
    - For backdating cases, the commencement date is based on per user inputs.
    - For non-backdating cases, the commencement date is determined as follows:

        - For standard LCA with valid health warranty, commencement date is the later date of LCA date or effective date of full payment date.
        - For standard LCA with expired health warranty, commencement date is the latest date among LCA date, effective date of full payment, and health warranty extended date.
        - For substandard LCA, commencement date is the latest date among consent given date, effective date of full payment, and health warranty extended date.
    - SG specific rules:
        - If the product is applicable to specific commencement date rule for shield product (in product configuration —> Main & Sales Information —> Product additional information —> Commencement Date Rule = Shield), then the commencement date rule is as follows:

A. If the registration date of the policy is Monday or Tuesday, the commencement date is automatically set to next Monday.

B. If the registration date of the policy is Wednesday, Thursday, Friday, Saturday or Sunday, the commencement date is automatically set to next Monday.

3. The proposal information the system updates includes:
    - Dates to be updated at benefit level and policy level:
        - Commencement date: based on calculation result
        - Risk Commencement date: based on calculation result
        - Product Cover End date: commencement date + coverage period
        - Premium end date
        - Next due date: Commencement date + payment frequency* (premium due times + premium due time in arrears), the payment frequency is by month.
    - Premiums to be updated:

        - Total in-forcing premium (policy level)
        - Standard premium (benefit level)
        - Extra premium (benefit level)
        - Total installment premium (benefit level)
        - Total installment premium (policy level)
    - The system updates the policy and benefit status to In-force and policy printing status to Waiting for Printing.
    - The system updates the insurance role for Proposer to Policyholder.
4. The system updates and inserts fee records.
    - Application of suspense to premium income
        - Any premium amount received prior to policy in force will be put into General Suspense account. When the case turns in force, system will apply the premium from the General Suspense account to premium income account. This includes arrears of premium for backdated policies. Different fee types will generate corresponding fee records.
        - If the Advance Premium indicator is Y, system will automatically transfer any excess payment to Advance Premium Account (APA) after using the amount required to enforce policy. Otherwise, system will automatically transfer any excess premium to General Suspense Accounting for refund purposes.
        - For investment linked plans, details of the unallocated amount (while pending fund transaction) will be available for query. After the fund transaction, the information on premium allocated, balance of units after the charges (Expense Fee, etc.) will be viewable.
    - Updating and inserting fee records, including premium income, debit agent commission.
    - Inserting short payment records.

- For payment methods of cash/cheque/credit card, if a pre-defined fixed amount configured in rate table > in-forcing premium - suspense premium > $0, system will insert short payment record to indicate the company is waiving it.

Gemini Underwriting User Guide

Summarize page

Underwriting Overview

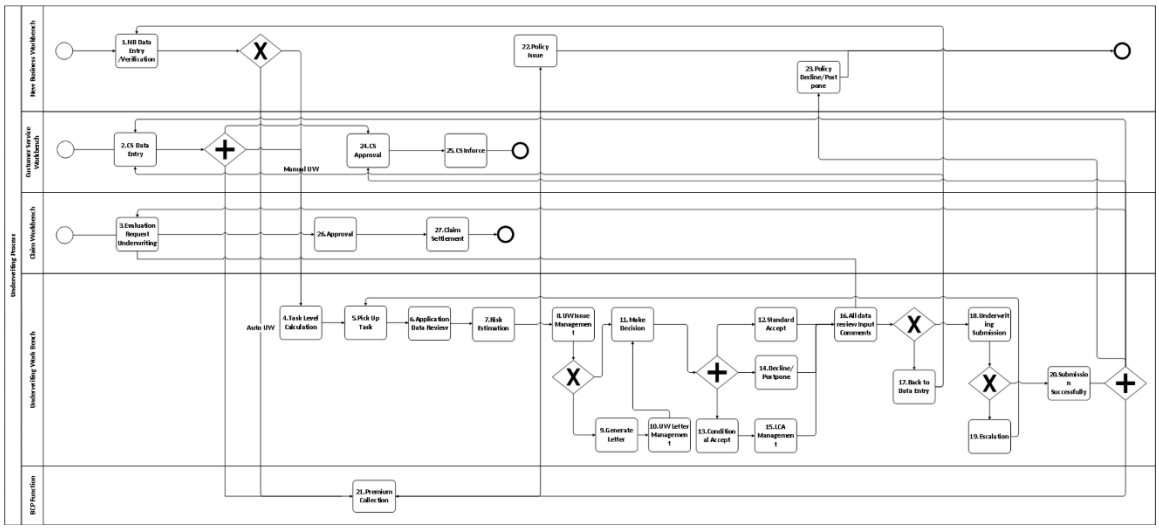

Underwriting workbench serves as a centralized platform for handling the underwriting operations coming from new business, customer service, claim and LCA reply.

The system checks the proposal information in the auto-underwriting process. If there are any risks that must be manually evaluated, the proposal will be sent to manual underwriting. Underwriters will assess the risks and make appropriate decisions accordingly.

During underwriting, the current underwriter needs corresponding authority to underwrite the proposal.

The following are the underwriting operation steps for new business. Customer service underwriting follows the same procedure. Claim underwriting involves reviewing task application information, inputing underwriting comments, and submitting the task. Claim users then review the underwriter’s comments.

Figure 1. Workflow for Underwriting

Perform Underwriting

This section describes how to perform underwriting.

[Prerequisite]

The workflow management system has transferred the proposal to underwriting, and its status is either **Waiting for Underwriting** or **Underwriting in Progress**.

Generally, complete underwriting for a life policy involves the following steps.

Retrieve the Underwriting Task

This section describes how to retrieve the new business underwriting task.

In underwriting worklist page, users are only able to view and work on cases they can access at their level.

[Prerequisite]

The workflow management system has transferred the proposal to underwriting, and its status is either **Waiting for Underwriting** or **Underwriting in Progress**.

1. From the left menu, select **Underwriting > Work List**.

Step Result: The underwriting search list displays.

Figure 2. Underwriting Search Page - Quick Search

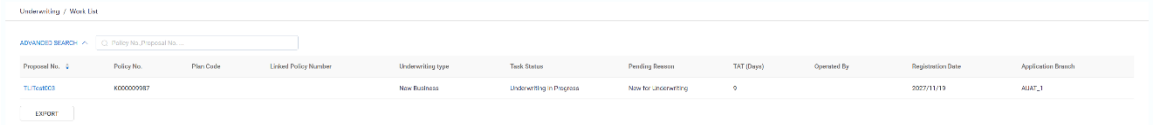

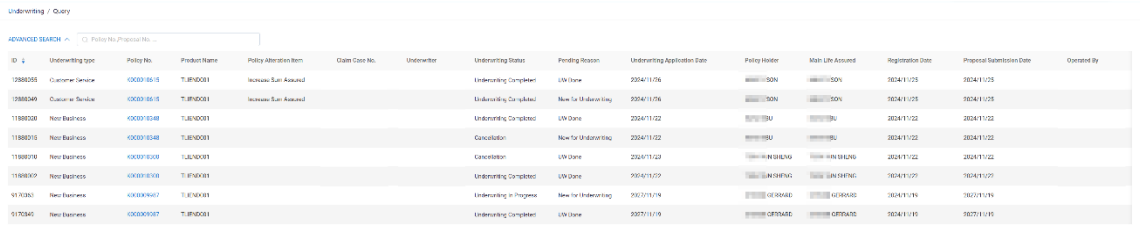

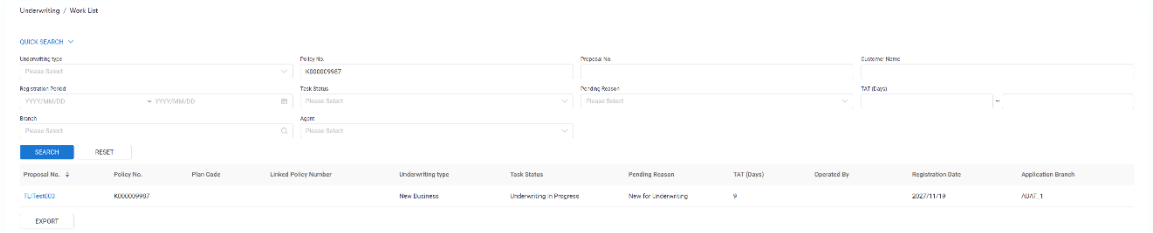

Figure 3. Underwriting Search Page – Advanced search

2. Set search criteria, and then click **Search**.

Step Result: The matching result is displayed in the **Search Result** table.

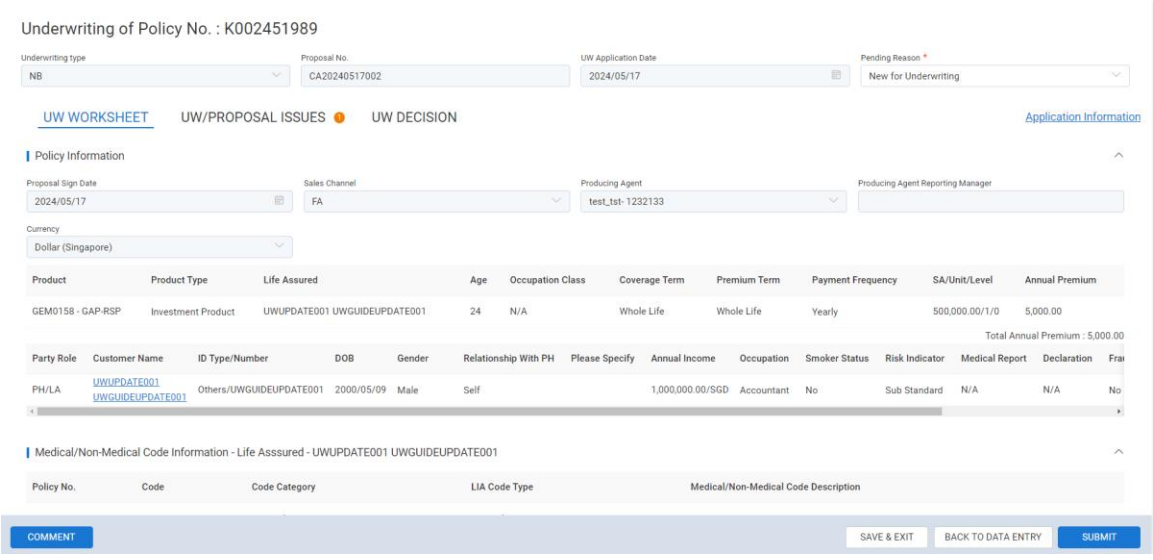

Figure 4. Underwriting Search Result

3. Click the target hyperlink and you will go to the underwriting page of the policy.

Step Result: The underwriting page is displayed.

Figure 5. Underwriting Page

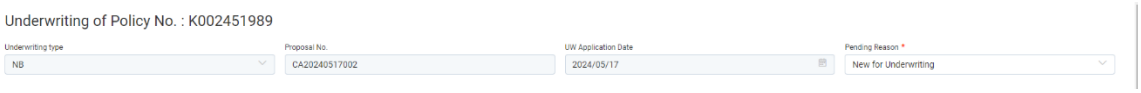

Underwriting Main

This section provides a comprehensive introduction of underwriting main work page.

Underwriting work page UI is composed of Application Information and three tabs regarding UW issue, Risk estimation, Make decision and so on. This design enables underwriters to complete all tasks in one place and allows for quick and easy information checks.

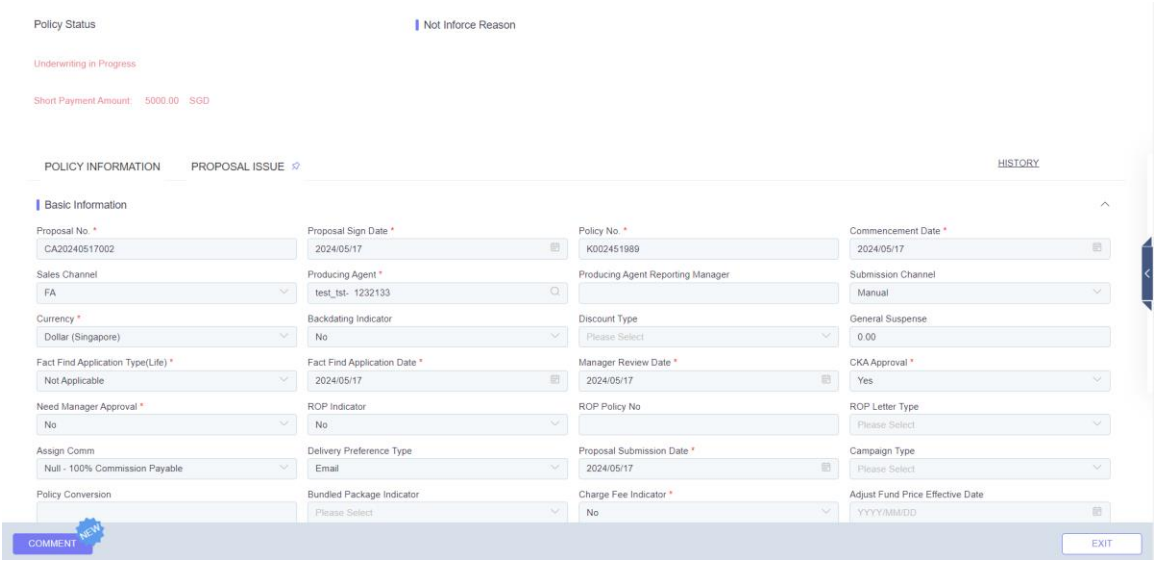

1. In the **Application Information** section, you can view basic application information of the underwriting task.

Figure 6. Application Information Section

2. (Optional) Click **Application Information** hyperlink to view detailed information about the policy. Click **Image** to go directly to image system to view policy and client related images when it is integrated with certain DMS.

Figure 7. Detailed Information Page

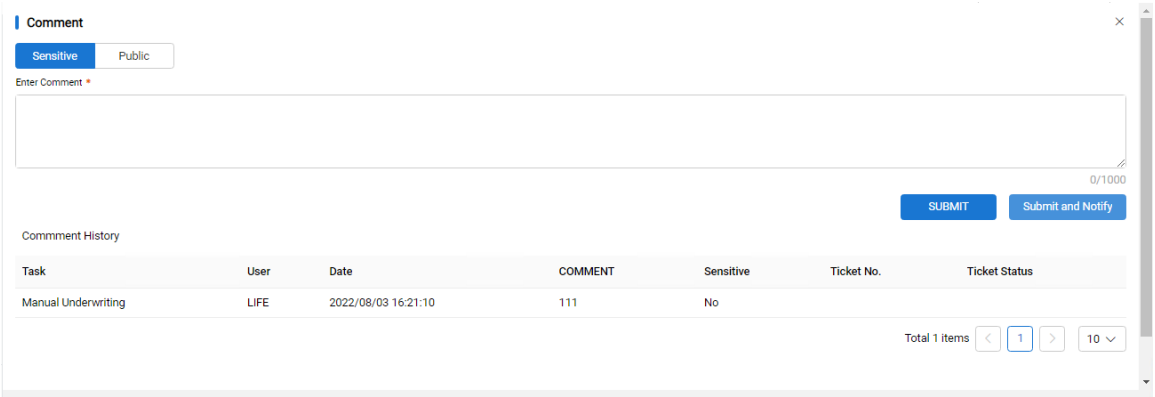

3. Click tabs regarding UW worksheet, UW/ Proposal Issues and UW decision to go on with operations.
4. Click **COMMENT** to leave a comment related to current UW case.

- In Comment section, user can decide whether the comment is sensitive or not.
- In Comment History section, user can review history comments.
- Added comments will be displayed in UW Comments History section in UW worksheet.

- Underwriter could input comments which will be sent to claim user for reference, then claim user could check and query comments input by underwriting user.
- For the claim case with multiple policies, when user input comments and submit UW task for one of the policy in this claim case, the other UW task for same claim case will be automatically submitted.

Figure 8. Comment Window

UW Worksheet

This section describes related concepts about UW worksheet.

In UW workbench, UW worksheet provide all dimensions of risk estimation. User can review all policy level and customer level risk-related information and history. UW worksheet page shows detail information such as policy information, medical/non-medical code information of all life assureds, risk summary regarding all life assureds, letters, life survey, UW comments history, UW decision and escalation history, as well as LCA letter information.

Policy Information

This section describes related concepts of policy information section.

1. With policy information section, user can have an overview of policy registration information, product information, and policy related policyholder/life assured information.

Figure 10. Policy Information Section

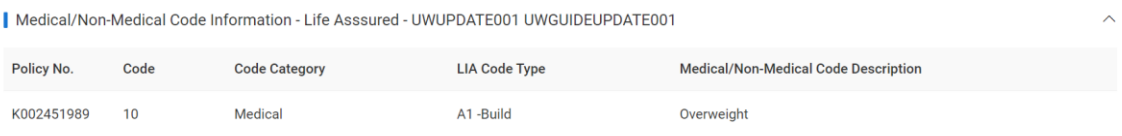

2. User can operate accordingly:

Action	Result
Click customer name hyperlink	A new page to show detail customer information in core system without need of login.
Click **VIEW** under Medical Report	A new page to show all medical reports of this client, can be image or both OCR recognized content and image.
Click **VIEW** under Declaration	A new page to show declaration content, can be image or both input content and image.

Medical/Non-Medical Code Information

This section describes related concepts about Medical/Non-Medical section.

1. The Medical/Non-Medical section displays the existing customer LIA code along with its description to alert users to potential high-risk items or conditions.

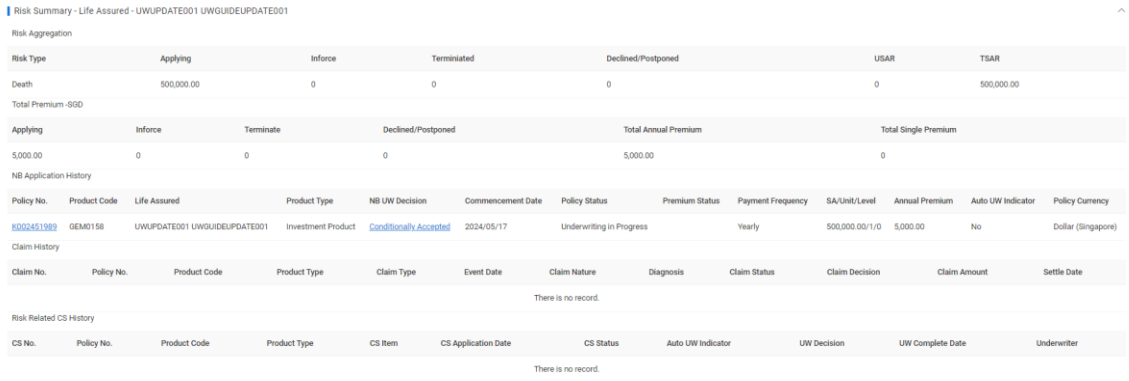

Risk Summary

This section describes related concepts about Risk Summary section.

1. Risk Summary section displays all necessary risk-risk aggregation, total premium, related information and operation history, including Risk Aggregation, NB Application History, Claim History, Risk Related CS History.
2. If the same life assured has NB, claim or CS history records of this or other policies, then system will display all those history records in history section regardless if these policies has UW records.

Figure 11. Risk Summary Section

Note: Field values only display when system is integrated with a corresponding third-party system.

3. In risk summary section, user can operate accordingly:

Action	Result
Click hyperlink of Policy No./Claim No./CS No.	Pop up screen to show common/claim/CS query of this policy.
Click hyperlink of NB/CS UW Decision	Pop up screen to show UW query of this NB/CS change.

4. Claim history will display current claim application for underwriting task

Figure 12. Claim History

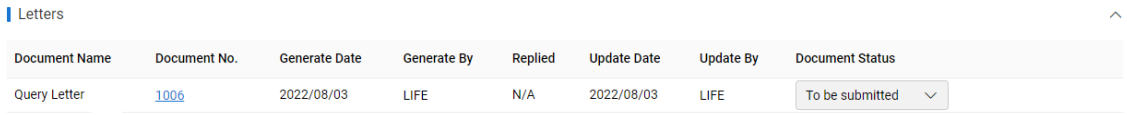

Letters

This section describes related concepts of Letters section on UW Worksheet page.

1. Letters section includes all letters generated for the current case.

Figure 13. Letters Section

2. In Letters section, user can operate accordingly:

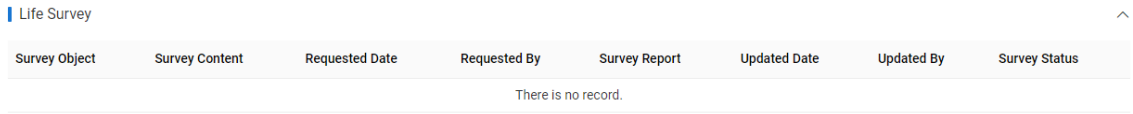

Action	Result
Click hyperlink of Document No.	User can get PDF of this document.
Click hyperlink under Replied	Replied image of this letter displays.

Life Survey

This section describes related concepts of Life Survey section on UW Worksheet page.

1. Life Survey section displays life survey related information of the survey object including survey content, survey report, survey status, etc.

Figure 14. Life Survey Section

note

Field values only display when system is integrated with a third-party system.

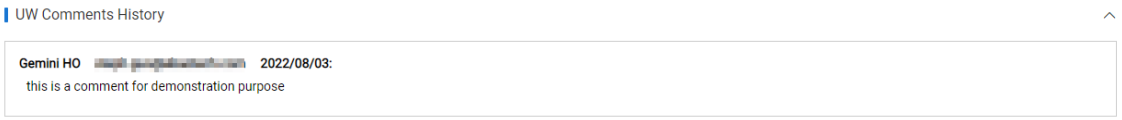

2. User can query Survey report of the survey object by clicking **VIEW** under survey report, which can be image or content from investigation system/module.

UW Comments History

UW comments history section displays all history records of the underwriting case.

It also shows the user who left the comment, their organization, and the date of the comment.

Figure 15. UW Comments History Section

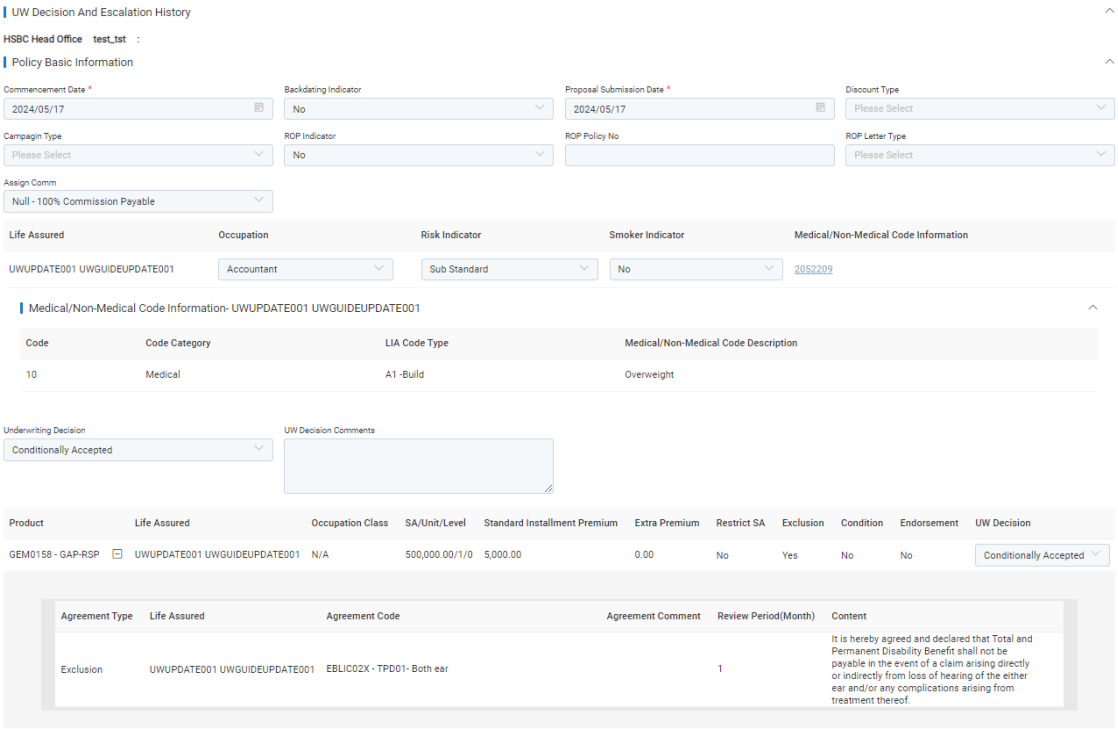

UW Decision and Escalation History

This section displays all past UW decision and escalation history.

It also shows the user who made the decision, their organization, and the operation date.

Figure 16. UW Decision and Escalation History Section

LCA

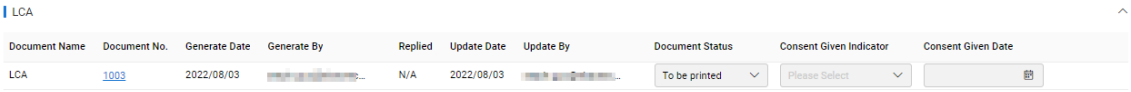

This section displays basic information of all generated LCA.

User can operate accordingly:

Action	Result
Click hyperlink of Document No.	Pop up screen to show pdf of the LCA.

Action	Result
Go to Document Management menu	Search out the document with document no. and update its status.

Figure 17. LCA Section

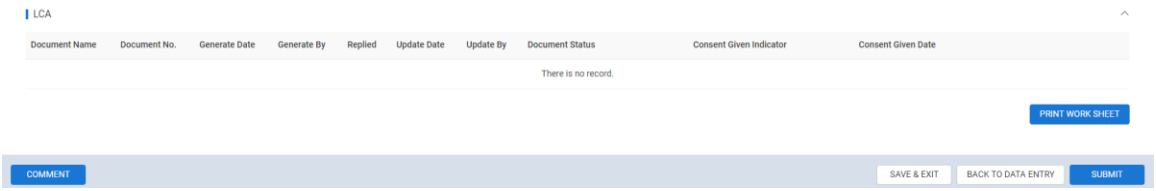

Print Worksheet

UW worksheet UI support printing the whole page. User can find **Print Worksheet** button at the end of the worksheet.

Clicking **Print Worksheet** prompts the system to generate a PDF of the UW worksheet. Users can either print it directly or email it with the PDF attached.

Figure 18. Print Worksheet Button

Check UW & Proposal Issue Issues

This section describes how to check UW issues. All underwriting issues must be resolved before submitting underwriting.

[Prerequisite]

Underwriting task is retrieved and opened.

1. On UW issues page, you can operate accordingly:

Purpose	Operation
Check Underwriting Issues	- Select issues and click **Letter Generate**. Generated letter will be sent to receiver by email and generation record will display in **Letter List** section. You can also find the document in Document Management. - Add new issue per different issue category such as Admin, Medical, Medical Examination, Payment, etc. - Manually change Status of UW issue by

Purpose	Operation
	clicking **CLOSE** or **DELETE**. - Only manual issue whose status is open can be deleted by the user who add it.
Check Proposal Issues	- Review pending manual proposal issue from New Business stage. - Manually change Status of UW issue by clicking **CLOSE** or **DELETE**. - Only manual issue whose status is open can be deleted by the user who add it.
Add a manual issue	- (Optional) Click **ADD A MANUAL ISSUE** in the issue list to add a new issue. Enter the issue and comment, then click **confirm**. - The issue will be added to issue table. User can operate referring to above description.
Follow Up Query Letter	- Follow up and reply query letter for underwriting.
Update LCA	- Follow up and update LCA (Letter of Conditional Accept) status.

Figure 19. UW/Proposal Issues Page

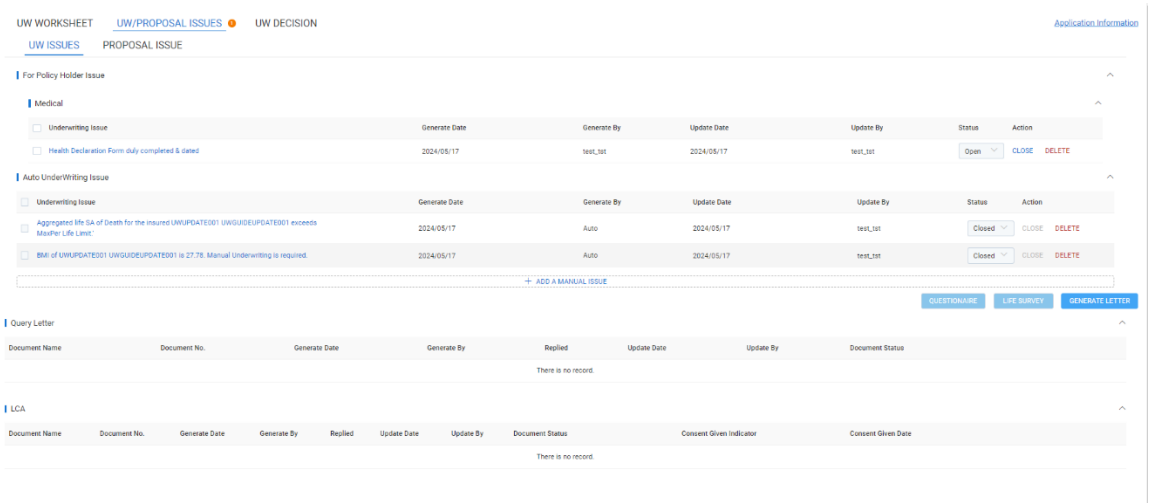

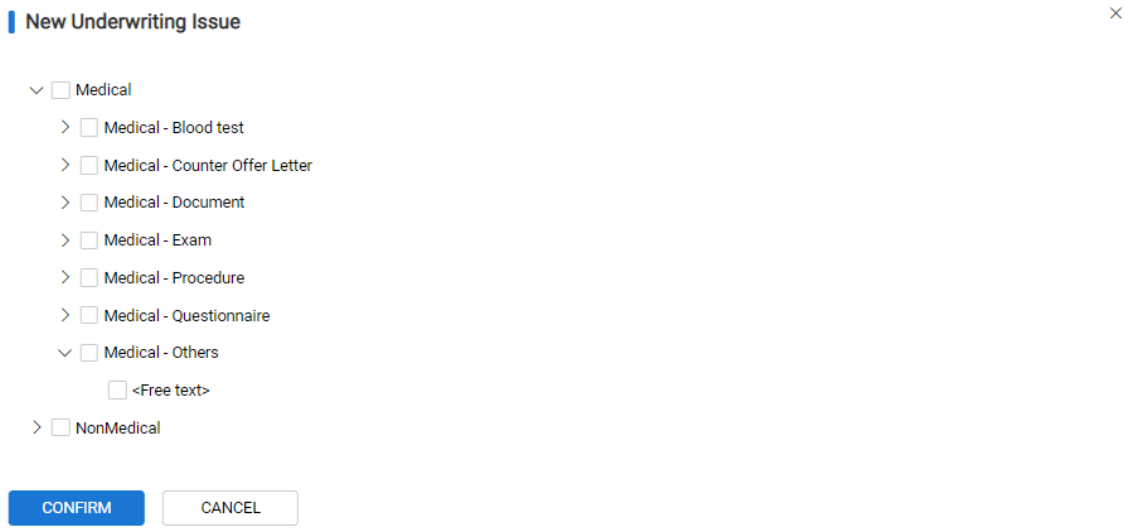

Figure 20. Add New UW Issue Window

note

When selecting new underwriting issue, user can:

- double click any item to modify its content and select.
- double click Free Text to define a totally new issue.

Make UW decision

This section describes how to make out underwriting decision on **UW Decision** page.

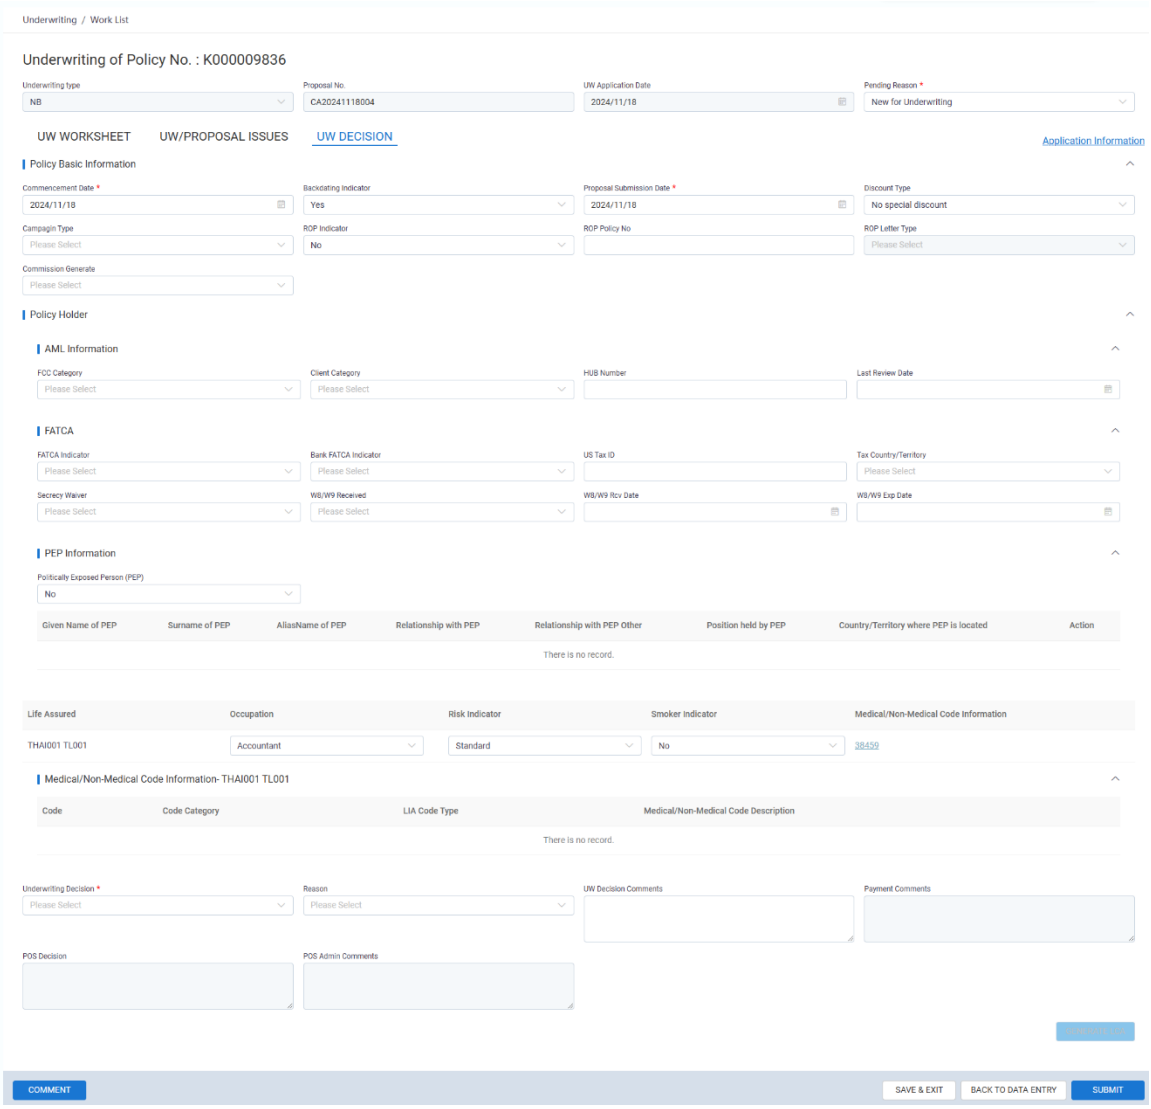

[Prerequisite]

Underwriting issues are all closed. Risk estimation has been finished.

1. Click **UW Decision** tab, it lists all life assureds and decision making fields.

Step Result: The UW Decision page displays.

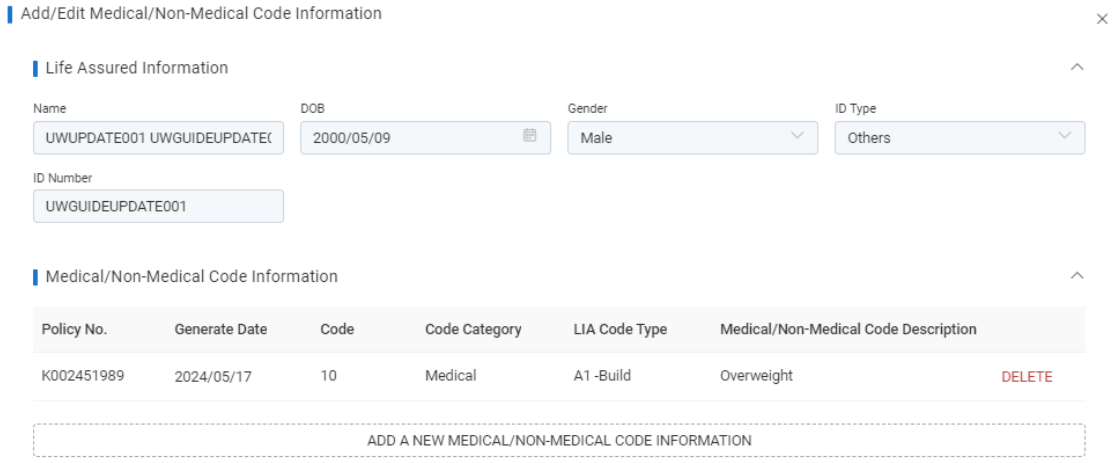

Figure 21. UW Decision Page

2. Click **Medical/Non-Medical Code Information** hyperlink,

Step Result: Add/Edit Medical/Non-Medical Code Information page displays.

Figure 22. Add/Edit Medical/Non- Medical Code Information

3. Select from underwriting decision list to make decision for the underwriting case.

If	**Result**
Select Accepted, Postponed, or Declined	Decision will be made for all products in current underwriting case.
Select Conditionally Accepted	- The product list displays and user is able to make decision for each of them. - If select conditionally accept for any of the product, user can do further operations to add conditions with decision comments.

Figure 23. Conditionally Accepted UI

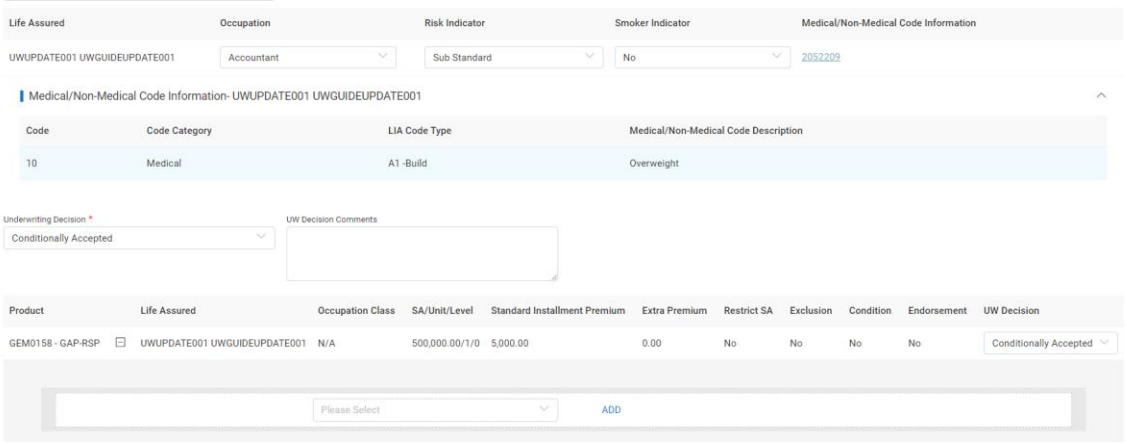

Figure 24. Add Extra Loading Window – Health Loading

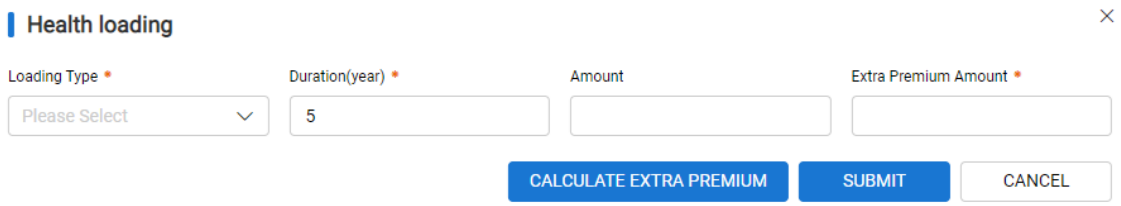

Figure 25. Add Extra Loading Window – Occupation Loading

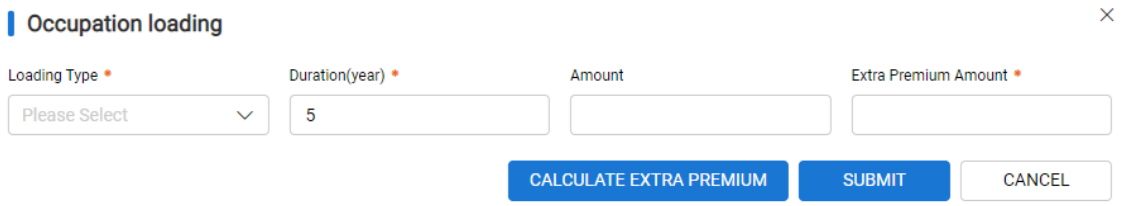

Figure 26. Add Extra Loading Window – Other Loading

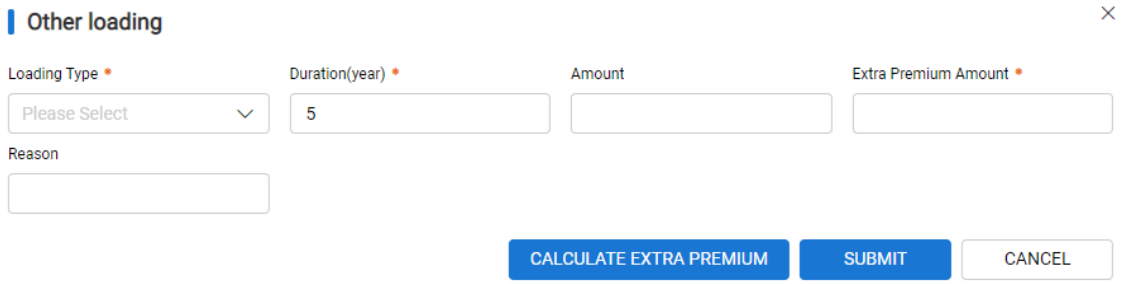

Figure 27. Add Restrict SA Window

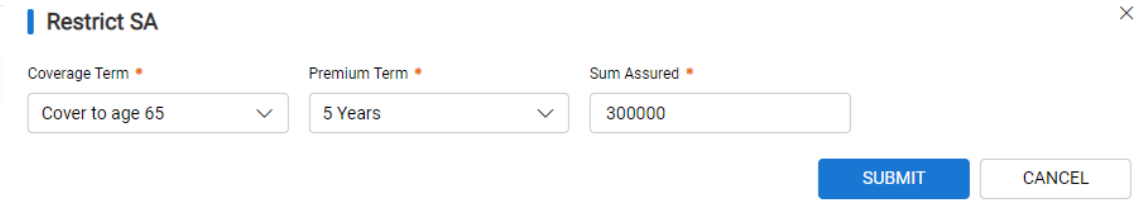

Figure 28. Add Exclusion Window

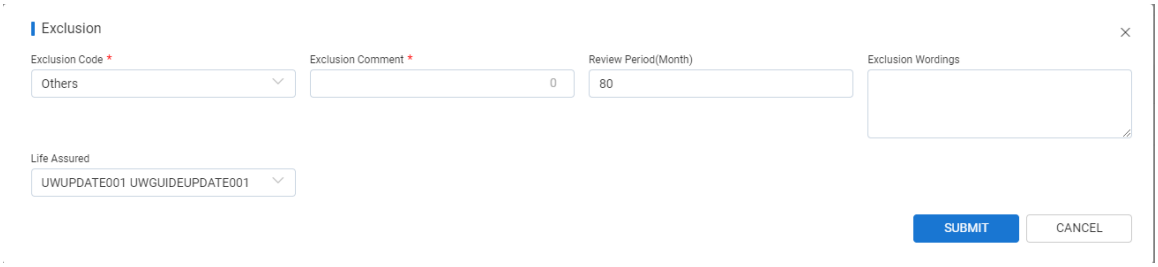

Figure 29. Add Condition Window

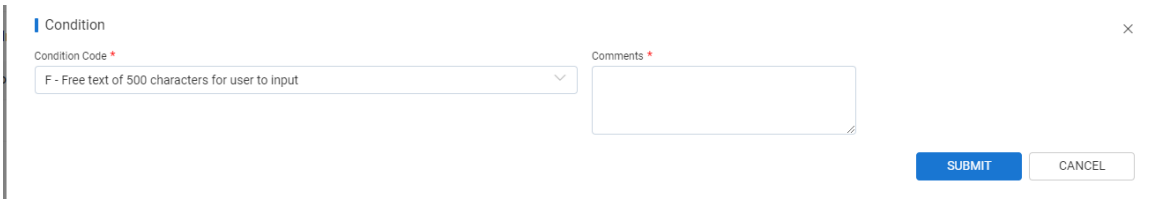

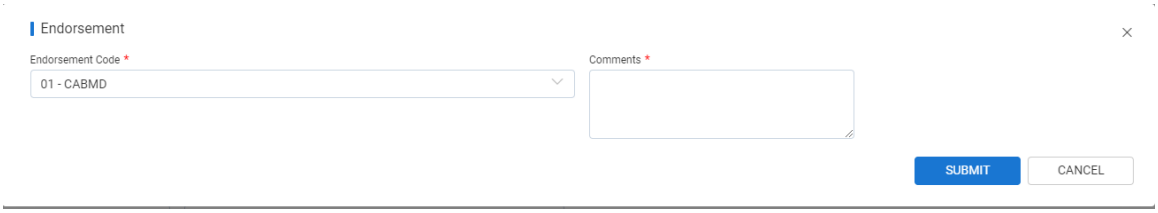

Figure 30. Add Endorsement Window

4. Click **Underwriting Submit** to confirm decision making.

Underwriting Submit

This section describes related concepts about underwriting submission.

1. After all the above operations are finished, click **Underwriting Submit** at the bottom right corner.
2. System conducts multi checks.

a. If there is any to-be-submitted letter/survey, system will check following below steps:

If	Action
any letters are to-be-submitted	Status be updated to To be printed/To be published; case status will still be UW in progress, but pending letter displays **Yes**. System will continue to check if there is any survey to-be-submitted.
any survey are to-be-submitted	Status be updated to Submitted; Case will disappear from pool, and status is UW in progress, but Survey status will be Submitted. System will end check and back to work list.

b. If there is no to-be-submitted letter/survey, system will check UW decision detail:

If	Action
no decision for any policy or product	System will show error: Please input UW decision.

If	Action
there are UW decision	check if there is to-be-submitted LCA or not.

If any LCA are to be submitted, system check whether UW approval is needed (by check user's authority):

If	Action
Within current user's authority	When submit the case, LCA status will be updated to To Be Print. Case status will still be UW in progress.
Beyond current user's authority	case be escalated to a superior with status updated to pending approval and shown at approval task pool, LCA status will still be To Be Submitted.

If there is no any pending LCA, system will check underwriter's authority:

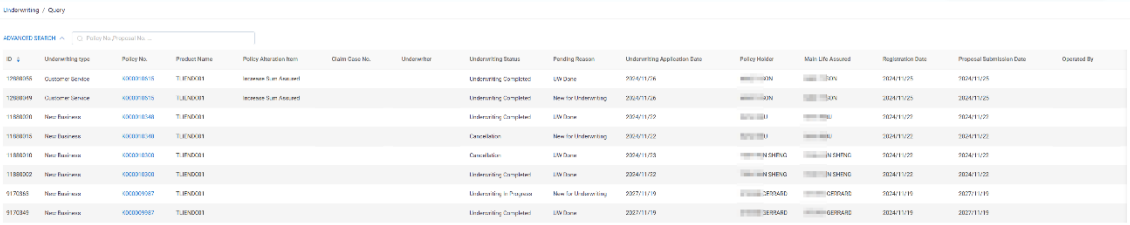

If	Action
Within current user's authority	When submit the case, UW status will be updated to completed, system need to keep UW worksheet data, UW issues, UW decision data.
Beyond current user's authority	case be escalated to a superior with status changed to pending approval and shown at approval task pool.

Underwriting Query

This section describes underwriting query page.

1. With UW Query menu, user is able to query the info of ongoing underwriting applications. The underwriting status can be Waiting for Underwriting, underwriting in Progress, Escalated, Underwriting Completed, Cancellation, and Invalid.

Figure 31. Underwriting Query Page

2. The detailed UW UI page you access from query result list is the same as that you access from underwriting worklist, but all fields are inaccessible.

Figure 32. Underwriting Query Detail UI

Exclusion Query

This section describes underwriting query page.

1. With UW Exclusion QUERY menu, user is able to query the info of ongoing policy exclusion after policy issuance.

Figure 33. Exclusion Query

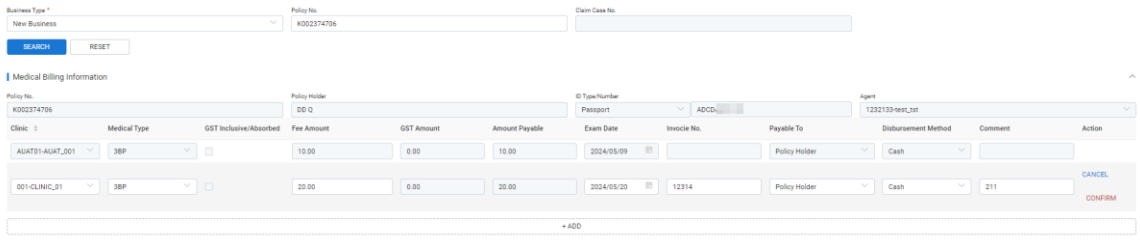

Medical Billing

Create Medical Billing

This section describes how to create medical billing for underwriting/claim which request medical check or claim history.

1. From the left menu, select **Underwriting > Medical Billing > Create Medical Billing**,
2. Input search criteria such as Business Type, Policy No, etc.
3. Apply medical billing information such as Clinic, Medical Type, Fee Amount, etc.,
4. Click **Confirm** to submit medical billing information.

Figure 34. Create Medical Billing Page

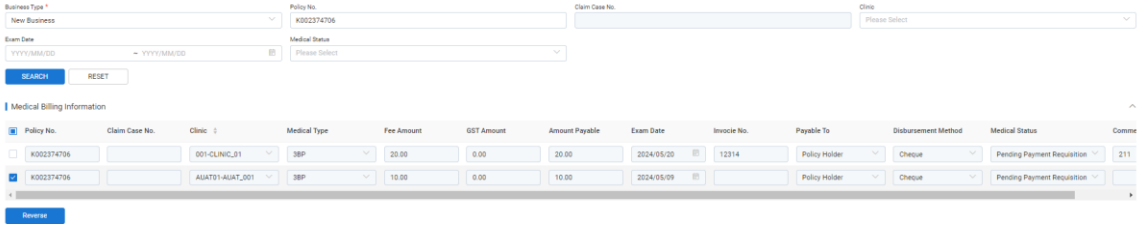

Reverse Medical Billing

This section describes how to reverse medical billing for underwriting/claim which request medical check or claim history.

1. From the left menu, select **Underwriting > Medical Billing > Reverse Medical Billing**,

2. Input search criteria such as Business Type, Policy No, etc.,
3. Select medical billing record which need reverse,
4. Click **Reverse** to submit medical billing reversal.

Figure 35. Reverse Medical Billing Page

Underwriting Main Page

Table 3 Field Description of Application Information Section and hyperlink fields on main page

Field Name	Description
Underwriting Type	Display Underwriting Task Type such as New Business, Customer Service, etc.
Policy No.	Policy No information.

Field Name	Description
Proposal No.	Proposal No information.
UW Application Date	Display UW Application Date.
Application Information	Click to view NB query page.
Save & Exit	Save and Quit current task.
Back to Data Entry	Sent task back to Data Entry.
Submit	Submit UW task.

UW Worksheet Page

Table 4 Field Description of Policy Information Section

Field Name	Description
Proposal Sign Date	Display sign proposal date.
Sales Channel	Display sales channel.
Producing Agent	Display Producing Agent code and name.
Producing Agent Reporting Manger	Display reporting manager of agent.
Currency	Display currency.
Product	Display product.
Product Type	Display Product Type.
Life Assured	Display life assured name.
Age	Display age.
Occupation Class	Display occupation class.
Coverage Term	Display coverage term.
Premium Term	Display premium term.
Payment Frequency	Display payment frequency.

Field Name	Description
SA/Unit/Level	Display SA/Unit/Level.
Annual Premium	Display annual premium.
Total Annual Premium	Display total annual premium.
Party Role	Display party role.
Customer Name	Display customer name.
ID Type/Number	Display ID type/number.
DOB	Display date of birth.
Gender	Display gender.
Relationship With PH	Display relationship with policyholder.
Please Specify	Display value when Relationship With PH as Other.
Annual Income	Display annual income.
Occupation	Display occupation.
Smoker Status	Display smoker status.
Risk Indicator	Display risk indicator.
Medical Report	Display medical report. User can click view to query detail file.
Declaration	Display declaration.
Fraud	Display Fraud Indicator value as Y/N.
Fraud On Policies	Display which policy is customer is Fraud.
Bankruptcy Status	Display Bankruptcy Status value as Y/N.

Table 5 Field Description of Risk summary Section

Field Name	Description
Risk Aggregation	-
Risk Type	Display risk type.

Field Name	Description
Applying	Display applying risk amount.
Inforce	Display inforce risk amount.
Terminated	Display terminated risk amount.
Declined/Postponed	Display declined/postponed risk amount.
USAR	Total risk amount in force in current 1 year.
TSAR	Display total risk amount.
Total Premium- Currency Code	-
Applying	Display applying premium.
Inforce	Display inforce premium.
Terminated	Display terminated premium.
Declined/Postponed	Display declined/postponed premium.
Total Annual Premium	Total annualized premium.
Total Single Premium	Total single premium.
NB Application History	-
Policy No.	Display NB policy number. click hyperlink to query policy information.
Product Code	Display product code.
Product Type	Display product type.
NB UW Decision	Display NB UW decision. Click hyperlink to query detailed NB UW information.
Commencement Date	Display commencement date.
Policy Status	Display policy status.
Premium Status	Display premium status.
Payment Frequency	Display payment frequency.

Field Name	Description
SA/Unit/Level	Display SA/Unit/Level.
Annual Premium	Display annual premium.
Auto UW Indicator	Display indicator for process pass Auto UW validation or not.
Policy Currency	Display policy currency.
Claim History	-
Claim No.	Display claim no. Click hyperlink to query detailed claim information.
Policy No.	Display policy no. of the claim case.
Product Code	Display product code.
Claim Type	Display claim type.
Event Date	Display event date.
Claim Nature	Display claim nature.
Diagnosis	Display diagnosis info.
Claim Status	Display claim status.
Claim Decision	Display claim decision.
Claim Amount	Display claim amount.
Settle Date	Display settle date of the claim case.
Risk Related CS History	-
CS No.	Display CS case no. Click hyperlink to query detailed CS case information.
Policy No.	Display policy no.
Product Code	Display product code.
Product Type	Display Product Type.
CS Item	Display CS item.

Field Name	Description
CS Application Date	Display CS application date.
CS Status	Display CS status.
Auto UW Indicator	Display auto UW indicator. Y or N.
UW Decision	Display UW decision. Click hyperlink to query detailed CS UW information.
UW Complete Date	Display UW complete date.
Underwriter	Display underwriter.

Table 6 Field Description of Letters Section

Field Name	Description
Document Name	Display document name.
Document No.	Display document no. Click hyperlink to get pdf of the document.
Generate Date	Display document generate date.
Generate By	Display user name who generated the document.
Replied	Display replied info.
Update Date	Display updated date.
Update By	Display update user name.
Document Status	Display document status.

Table 7 Field Description of Life Survey Section

Field Name	Description
Survey Object	Display survey object.
Survey Content	Display survey content.
Requested Date	Display requested date.
Requested By	Display request by whom.
Survey Report	Display survey report hyperlink if any.

Field Name	Description
Updated Date	Display updated date.
Updated By	Display updated by whom.
Survey Status	Display survey status.

Field Name	Description
Document Name	Display document name.
Document No.	Display document no. Click hyperlink to get pdf of the document.
Generate Date	Display document generate date.
Generate By	Display user name who generated the document.
Replied	Display replied info.
Update Date	Display updated date.
Update By	Display update user name.
Document Status	Display document status.
Consent Given Indicator	Display consent given indicator.
Consent Given Date	Display Consent Given Date.
Print Worksheet	Click to print whole page of UW worksheet.

UW Issue Page

Table 10 Field Description of UW issue Section, Generate Letter Window, and Medical Exam Window

Field Name	Description
Unselected x/y Items	Display the Unselected Service Provider and show the Checked Item No./All the Item No. in container. User can tick the checkbox to select all.
Selected x/y Items	Display the Unselected Service Provider and show the Checked Item No./All the Item No. in container. User can tick the checkbox to select all.
>(Add)	Add checked item from the unselected to the selected.
<(Remove)	Remove checked item from the selected.
Option	Only could select for pending status issue for letter generation.
Underwriting Issue	Display Issue Description when Click Pop up Window.
Generate Date	Display Generate Date.
Generate By	Display the user whom generated the issue. If it's generated by system, display **Auto**.
Status	Display Dropdown list: Pending, Ignore, Deleted, Closed and allow to change issue status manually.
Update Date	Last Update Date information.
Update By	Display the user who did the latest update.
Add a manual issue	Add a new underwriting Issue.
Questionnaire	Click to create questionnaire and send.
Life Survey	Click to create life survey and send.
Generate Letter	Click to display Generate Letter window.
Policy Holder	Click to add a new proposal Issue by manual.
Service Agent	If ticked, the query letter will be sent to policyholder.
Send Method	Select to send the letter by mail, E-mail, etc.
Preview	Click to Preview letter.

Field Name	Description
Generate Letter	Click to Generate Letter.
Close	Close the generate letter window.
Medical Exam	Click to create medical exam request.
Medical Exam Item	Display Medical Check Item Description.
Special Medical Exam Item	Click add icon to add special medical exam items.
Document No.	Display Document No.
Document Name	Display Document Name.
Generate Date	Display Generate Date.
Generate By	Display the user who generated the letter.
Status	Select letter status from dropdown list which are: To be printed, Replied, Discarded.
Reply Date	Enter Reply Date.
Update	Click to update the information on the page.

Table 11 Field Description of Query Letter Section

Field Name	Description
Document No.	Display Document No.
Document Name	Display Document Name.
Generate Date	Display Generate Date.
Generate By	Display the user who generated the letter.
Replied	Display if the letter is replied.
Status	Select letter status from dropdown list which are: To be printed, Replied, Discarded.

Field Name	Description
Update Date	Display Update Date.
Update By	User name who updated the letter.
Document Status	- Disabled field. - Initial status=To be submitted, which cannot be seen at document management pool; After user click Underwriting Submit button, system will update document to: 1) To be printed if hardcopy; 2) To be published if send email/post to agent/customer portal; - After user print at document management, system update to Printed; After system send email to client or post to agent/customer portal, system will update to Published. - After user reply at document management module or get a reply from agent/customer portal, system update status=Replied.
Reply	- Only when status=printed/published, reply button is enabled. - If user click reply, system will update status to replied.
Delete	- Only when status is To be submitted, delete button is enabled. - If user click delete, the status will be updated to Deleted.

Proposal Issue Page

Table 12 Field Description of LCA Section

Field Name	Description
Proposal Issue	Display Issue Description. On clicking the hyperlink, system will pop up **Edit Proposal Issue** screen. For opened issue, the pop up screen is editable, and for other issue status, the pop up is read only.
Details	Display Details of proposal issue.
Generate Date	Display Generate Date.
Generate By	Display the user whom generated the issue. If it's generated by system, display **Auto**.

Field Name	Description
Update Date	Display Last Update Date.
Update By	Display Last Update By Information.
Status	If it is generated by system, display issue status which can be Pending, Ignore, Deleted, Closed. If it is generated by user, display and allow to change issue status manually.
Update	Click to update the status user choose on the page.
Add A Manual Issue	Click to add a new proposal Issue by manual. System pop up the **New Proposal Issue** page.
New/Edit Proposal Issue Pop Up	-
Manual Issue	Enter manual issue content.
Comments	Enter manual issue comment.
Display	Only display when **edit** the manual issue. Enter the display comment for manual issue.
Add/Confirm	On clicking the button, system will add/save the change for the manual issue.
Cancel	On clicking the button, system will close the pop up without saving any changes.

Table 13 Field Description of LCA Section

Field Name	Description
Document No.	Display Document No. Click to get pdf document.
Document Name	Display Document Name.
Generate Date	Display Generate Date.
Generate By	Display the user who generated the letter.

Field Name	Description
Replied	Display if the letter is replied.
Status	Select letter status from dropdown list which are: To be printed, Replied, Discarded.
Update Date	Display Update Date.
Update By	User name who updated the letter.
Document Status	- Disabled field. - Initial status=To be submitted, which cannot be seen at document management pool; After user click Underwriting Submit button, system will update document to: 1) To be printed if hardcopy; 2) To be published if send email/post to agent/customer portal; - After user print at document management, system update to Printed; After system send email to client or post to agent/customer portal, system will update to Published. - After user reply at document management module or get a reply from agent/customer portal, system update status=Replied.
Consent Given Indicator	Select agree or reject.
Consent Given Date	Auto displays when click update after select consent given indicator.
Update	- User must choose consent indicator when click update, else show error message; - When click update, system will auto update document status to replied; update consent given indicator date to current system date;
Delete	- Only when status is To be submitted, delete button is enabled. - If user click delete, the status will be updated to Deleted.

UW Decision Page

Table 14 Field Description of UW Decision Page

Field Name	Description
Policy Basic Information	
Commencement Date	Display and select commencement date of policy.
Backdating Indicator	Select policy allow backdate.
Proposal Submission Date	Display and select proposal submission date.
Discount Type	Select policy discount type.
Campaign Type	Select policy campaign Type.
ROP Indicator	Select and update ROP Indicator.
ROP Policy No	Input ROP policy no information.
ROP Letter Type	Select ROP letter type.
Commission Generate	Select policy need generate commission or not.
Policyholder-AML Information	
FCC Category	It is the type of Financial Crime Country (FCC). Dropdown list and the available option and meaning is as follow: BL - Blacklist, CR - Cross Border Restrictions, DT - Deemed Terrorist (TSOFA), FO - Freezing Order, HT - Higher Tax Risk (CIP), ID - Obtain Identity Document, OD - Outstanding Documents, PO - Production Order, RF - Ring Fenced (exit customer), SA - Sanctioned Customer, ST - Suspicious Transaction Report, SR - SRIP Service Restriction in Place, TR - TRA.
Client Category	It is the client category for AML. Dropdown list and the available option and meaning is as follow: HI - High Risk, ME - Medium Risk, LO - Low Risk, SC - Special Category (SCC), PE - Politically Exposed Person (PEP), PH - Highest Risk PEP.

Field Name	Description
HUB Number	Input data field allow user to capture the information.
Last Review Date	Data field allow user to input the AML review date.
FATCA	
FATCA Indicator	United States Person Indicator, Select Yes, NO or No, but I have any of the following from the list.
Bank FATCA Indicator	Select Bank FATCA Indicator.
US Tax ID	Input US Tax ID.
Tax Country/Territory	Select TAX Country Territory.
Secrecy Waiver	Select secrecy waiver indicator.
W8/W9 Received	Select W8/W9 document received indicator.
W8/W9 Rcv Date	Select W8/W9 document received date.
W8/W9 Exp Date	Select W8/W9 document expired date.
PEP Information	
Politically Exposed Person (PEP)	Select PEP indicator.
Politically Exposed Person (PEP) Table	
Given Name of PEP	Input given name of PEP.
Surname of PEP	Input surname of PEP.
AliasName of PEP	Input aliasname of PEP.
Relationship with PEP	Relationship with PEP.
Relationship with PEP Other	Relationship with PEP other details.

Field Name	Description
Position held by PEP	Input position of PEP.
Country/Territory where PEP is located	Select Country/Territory where PEP is located.
Action	Delete PEP table record.
Life Assured	Displays life assured name.
Occupation	Select life assured's occupation code and occupation. If there is valid LCA and LCA consent given indicator is reject, UW decision fields are all read-only; only when there is no valid LCA, or LCA status is rejected, underwriter can revise UW decision fields.
Risk Indicator	Select from the list.
Smoker Indicator	Select from the list.
Medical/No Medical Code Information	LIA code information for life assured, click hyperlink of code it will pop up new UI to Add/Edit Medical/Non-Medical Code Information.
Discount Type	Select from the list.
Underwriting Decision	Make decision products in policy: Accepted, conditionally Accepted, Postponed, Declined.
Reason	Select reason for decision making from list.
Decision Comments	Enter decision related comments if any.
Product	Product code information.
Life Assured	Life Assured Name.
Occupation Class	Occupation class for Occupation code based on risk category defined.
SA/Unit/Level	Display sum assured/unit/level of product.

Field Name	Description
Standard Premium	Standard premium for product.
Restrict SA	Displays if there is restrict SA. Yes or No.
Exclusion	Displays if there is exclusion. Yes or No.
Condition	Displays if there is condition. Yes or No.
Endorsement	Displays if there is endorsement. Yes or No.
UW Decision	Underwriting Decision applied for product.
Risk Class	Select risk class from the list.
ADD	Select from the list to add loading or restrict SA.
Generate LCA	Click to generate PDF of LCA.

Table 15 Field Description of Add/Edit Medical/Non-Medical Code Information Page

Field Name	Description
Life Assured Information	
Name	Display Life Assured Name.
DOB	Display date of birth.
Gender	Display gender.
ID Type	Display Identifier Type.
ID Number	Display Identifier Number.
Medical/Non-Medical Code Information	
Policy No	Display policy no for life assured related with medical code information.
Generate Date	Display Medical Information record generate date.
Code	Display Medical Code.
Code Category	Display Category for Medical Code.

Field Name	Description
LIA Code Type	Display LIA code type information.
Medical/Non-Medical Code Description	Display Medical/Non-Medical Code description.
Delete	Delete Medical Code.
Add A New Medical/Non-Medical Code Information	Add new Medical Code.

Table 16 Field Description of Health Loading Window

Field Name	Description
Loading Type	Select from the drop down list which is retrieved from definition.
Duration (year)	Enter Duration (year) when Health Loading or is selected for Loading Type.
Amount	Enter Unit premium rate based on Loading type (or based on EM value configured).
Extra Premium Amount	Extra premium for product, editable based on loading type.
Calculate Extra Premium	Click to Calculate Extra Premium.
Edit	Edit current loading information.
Delete	Delete current loading information.

Table 17 Field Description of Occupation Loading Window

Field Name	Description
Loading Type	Select from the drop down list which is retrieved from definition.
Duration (year)	Enter Duration (year) when Health Loading or is selected for Loading Type.

Field Name	Description
Amount	Enter Unit premium rate based on Loading type (or based on EM value configured).
Extra Premium Amount	Extra Premium Amount calculated by API.
Calculate Extra Premium	Click to Calculate Extra Premium.
Edit	Edit current loading information.
Delete	Delete current loading information.

Table 18 Field Description of Other Loading Window

Field Name	Description
Loading Type	Select from the drop down list which is retrieved from definition.
Duration (year)	Enter Duration (year) when Health Loading or is selected for Loading Type.
Amount	Enter Unit premium rate based on Loading type (or based on EM value configured).
Extra Premium Amount	Extra Premium Amount calculated by API.
Reason	Enter the reason for other loading.
Calculate Extra Premium	Click to Calculate Extra Premium.
Edit	Edit current loading information.
Delete	Delete current loading information.

Table 19 Field Description of Restrict SA Window

Field Name	Description
Coverage Term	Coverage term for restrict SA.

Field Name	Description
Premium Term	Premium Term for restrict SA.
Sum Assured	Sum Assured for restrict SA.

Table 20 Field Description of Comment Window

Field Name	Description
Sensitive/Public	select whether current comment is sensitive or not.
Enter Comment	Enter comment in the text box.
Submit	Submit the comment.
Submit and Notify	Submit current comment and notify related user.
Task	Displays task name.
User	Displays name of user who submitted the comment.
Date	Displays comment submission date.
Comment	Displays comment.
Sensitive	Displays whether the comment is sensitive or not.
Ticket No.	Displays ticket No.
Ticket Status	Displays ticket status.

Underwriting Query Page

Table 21 Field Description of Underwriting Query Search Criteria Section

Field Name	Description
Quick Search Textbox	Enter proposal No. or policy No.
Quick Search Button	Support fuzzy search.
More/Hide Search	More: Click to show all search criteria and switch to Hide Search. Hide Search: Click to fold up all search criteria except Quick Search Textbox.

Field Name	Description
Customer Name	Enter policy holder name for now.
Registration Period	Enter or select a date which is UW task created date.
Application Source	Select from drop-down list for UW task source: New Business, Customer Service, Claim.
Underwriting Status	Select from drop-down list for UW task status.

Table 22 Field Description of Underwriting Query Search Result Section

Field Name	Description
ID	Display Underwriting Task ID.
Underwriting Type	Display Underwriting Type.
Policy No.	Display Policy No.
Product Name	Display Main Product Name.
Policy Alteration Item	Display Policy Alteration Item.
Claim Case No.	Display Claim Case No.
Underwriter	Display Underwriter Info.
Underwriting Status	Display Underwriting Status.
Pending Reason	Display Pending Reason for Underwriting Task.
Underwriting Application Date	Display Application Date.
Policy Holder	Display Policy Holder Name.
Main Life Assured	Display Main Life Assured Date.
Registration Date	Display Registration Date.
Proposal Submission Date	Display Proposal Submission Date.
Operated By	Display Underwriting task operated by whom.

Exclusion Query Page

Table 23 Field Description of Exclusion Query

Field Name	Description
Search Criteria	
Policy No	Input Policy No to search exclusion.
Result	
Policy Code	Display Policy No.
Exclusion Description	Display Exclusion Description.
Product Name	Display Product Name.
Life Assured	Display Life Assured.
Start Date	Display Start Date.
End Date	Display End Date.
Comments	Display Comments.

Create Medical Billing

Table 24 Field Description of Create Medical Billing

Field Name	Description
Search Criteria	
Business Type	Select business type for medical billing.
Policy No	Input policy no. for medical billing.
Claim Case No.	Input policy no. for medical billing.
Medical Billing Information	
Policy No.	Display policy no. for medical billing.
Policy Holder	Display policyholder name.
ID Type/Number	Display ID Type/Number information for policyholder.

Field Name	Description
Agent	Display agent code and name information.
Check Billing Records	
Clinic	Select clinic code and clinic name information.
Medical Type	Display medical item code.
GST Inclusive/Absorbed	Indicator for Billing Include GST or GST need absorbed by Insurer.
Fee Amount	Display medical check item amount.
GST Amount	Display GST amount for medical check item.
Amount Payable	Display total amount need pay to payee.
Exam Date	Display exam date.
Invoice No.	Display Invoice No. for medical billing.
Payable To	Display payee.
Disbursement Method	Display payment method information.
Comment	Display Comments Information for medical check item.
Button	
ADD	Add new medical check item record need reimbursement, and all value for need add item is editable before click button Confirm.
Confirm	Confirm need add item.
Cancel	Withdraw new add item.
Claim Medical Billing	
Business Type	Display as Claim.
Remark	Display claim medical billing remark.

Reverse Medical Billing

Table 25 Field Description of Reverse Medical Billing

Field Name	Description
Search Criteria	
Business Type	Select business type for medical billing.
Policy No	Input policy no. for medical billing.
Claim Case No.	Input policy no. for medical billing.
Clinic	Select clinic information.
Exam Date	Input Exam Date range for medical billing need to reverse.
Medical Status	Input Medical billing status to filter medical billing records.
Medical Billing Information	
Policy No.	Display policy no.
Claim Case No.	Display claim case no.
Clinic	Select clinic code and clinic name information.
Medical Type	Display medical item code.
GST Inclusive/Absorbed	Indicator for Billing Include GST or GST need absorbed by Insurer.
Fee Amount	Display medical check item amount.
GST Amount	Display GST amount for medical check item.
Amount Payable	Display total amount need pay to payee.
Exam Date	Display exam date.
Invoice No.	Display Invoice No. for medical billing.
Payable To	Display payee.
Disbursement Method	Display payment method information.
Comment	Display Comments Information for medical check item.

Field Name	Description
Button	
Reverse	Reverse medical billing record selected.

Appendix B: Underwriting Rules

New Business Underwriting Rules

This section outlines the rules in underwriting.

1. Proposal will not pass automatic underwriting if Life Assured has claim history with claim status is settled and system will generate underwriting issue **The insured {Insured.name} has claim history, manual UW is mandatory**.
2. Proposal will not pass automatic underwriting if the relationship between Policyholder and Life Assured is not **Self**, **Child**, **Spouse** or **Parent** and system will generate underwriting issue **The relationship between the insured {Insured.name} and proposer is not applicable**.
3. Proposal will not pass automatic underwriting if Life Assured has underwriting history as **Conditional Accepted**, **Postpone** or **Decline** with UW status is not **invalid** or **canceled** and system will generate underwriting issue **Postpone, decline or conditional accepted decisions have been given to existing policies linked to insured {Insured.name}, manual UW is mandatory**.
4. Proposal will not pass automatic underwriting if Occupation Class for Life Assured is too high (no less than 3 for main product or more than 3 for rider) and system will generate underwriting issue **The risk of insured's ({CoverageInsured.name}) job class is too high, please provide more information about job.**.
5. Proposal will not pass automatic underwriting if Manual Underwriting Indicator is defined as Y by product and system will generate underwriting issue **{CoverageProduct.internalId} needs manual UW as defined.**.
6. Proposal will not pass automatic underwriting if relationship between insured and beneficiary is not satisfied the insurable interest requirement (e.g. Husband, Wife, Child, Spouse, Parent, etc.) and system will generate

underwriting issue **The relationship between beneficiary {Beneficiary.name} and insured is not applicable**.

7. If life assured is: age xxx and gender = xx, the BMI should be between [x,y]. Actual BMI of {Insured.name} is xxx. Manual Underwriting is required.
8. Proposal will not pass automatic underwriting if the ratio of annual premium against annual income is greater than 1/4, and system will display message **Annual premium to annual income of proposer ratio is too high**.

note

Annual income should be converted to base currency and then compare with annual premium.

9. Risk aggregation is quite important for proposal, which will be processed by the system automatically. Proposal will not pass automatic underwriting if Life assured's any Cover Type exceeds its Max Per Life Limit and system will generate underwriting issue **Aggregated life SA of for the insured {Insured.name} exceeds Max Per Life Limit.**

- The aggregated risk per life will include the risk in the current proposal and any of the existing valid policies, concurrent proposals (pending proposals) which has the life (for whom the risk is aggregated) as either the proposer (if required) or the life assured.
- Risk is aggregated based on aggregation risk type defined by the benefit and aggregation formula accordingly. Currently the following aggregation risk types are predefined:
    - Death
    - Accidental Death
    - Accidental Death & Disability
    - DD Accelerated
    - DD Additional
    - Hospital Cash
    - Hospitalization
    - TPD Accelerated

        - TPD Additional
        - Waive
- The risk aggregation will be triggered under any of the following conditions:
    - Risk aggregation is triggered for the first time after the case has gone through Underwriting Process Control (UPC).
    - Risk aggregation is to be triggered prior to routing the case back to the underwriting work list.
    - For the CS application type, risk aggregation is to be triggered prior to routing the case to the underwriting work list.
- The procedure for risk aggregation is as follows:
    - The system retrieves the information on the current proposal, including the life assured, proposer information, and the proposal details.

note

The proposal details retrieved for risk aggregation include proposal number/policy number, benefit number, product code, rider type, sum assured, annual benefit, benefit term, form type, proposed life, joint life, and policy owner.

2. The system retrieves the party details for the life assured and proposer.
3. The system determines the risk for the life assured on the current proposal by calculating the following:
    - Aggregated risk sum assured on the current proposal for the life assured;
    - Per Life Limit on the current proposal for the life assured.
4. The system retrieves the in-force policies for the life assured.
5. The system determines the risk on the existing policies for the life assured by calculating the following:
    - Aggregated risk sum assured on the existing policies for the life assured.
    - Per Life Limit on the existing policies for the life assured.

- Total annual premium on the existing policies for the life assured.

6. The system determines the risk for the proposer on the current proposal by calculating the following:
    - Aggregated risk sum assured on the current proposal for the life assured.
    - Per Life Limit on the current proposal for the life assured.
7. The system retrieves the in-force policies for the proposer.
8. The system determines the risk for the proposer on the existing policies by calculating the following:
    - Aggregated risk sum assured on the existing policies for the life assured.
    - Per Life Limit on the existing policies for the life assured.
9. The system saves the aggregated risk information and the per life limit details as determined in the above steps.
10. If there is any question with answer is **Yes** in customer's health declaration, system will generate proposal issue "For question"" in Health Declaration - , the answer is Yes. Manual Underwriting is required." by question.
11. Proposal will not pass automatic underwriting if the claim ratio of product is over 15%(system parameter), and system will display message **Claim loss ratio of {product code} is over 15%. Manual Underwriting is required**.
12. If customer's five basic information (ID type + ID No. + Full Name + DOB + Gender) is not same as existing active customer while (ID type + ID No.) or (Full Name + DOB + Gender) is same as existing active customer.

- If (ID type + ID No.) is matched, raise UW issue: **There exists a similar customer to customer {customer full name} with the same ID type and ID number. Manual underwriting is required**.
- If (Full Name + DOB + Gender) is matched, raise UW issue with message B: **There exists a similar customer to customer {customer full name} with the same name, gender and date of birth. Manual underwriting is required**.

13. Define a new configuration tale to define the qualified UW cases and extraction rate of QA input: submit channel, sales channel, product output: QA rate. System picks up the qualified UW case by random according to QA rate. Qualified policy means policy pass all underwriting rules. If policy is picked for QA, system will raise a new UW issue: **Manual underwriting is required for Quality Assurance**.

14. Proposal will not pass automatic underwriting if customer's five basic information (ID type + ID No. + Full Name + DOB + Gender) or (ID type + ID No.) or (Full Name + DOB + Gender) is same as the one in blacklist, then raise UW issue: **Customer {customer full name} is in blacklist. Manual underwriting is required**.

15. Check backdating indicator. If backdating indi = Y in policy, check commencement date against main product's Earliest Date for Backdating in product definition. If commencement date is earlier than Earliest Date for Backdating, system will generate proposal issue: **Commencement date should be equal to or later than {Earliest Date for Backdating}**. If backdating indi = Y in policy, check backdating period against main product's Max Period for Backdating in product definition. If backdating period is more than Max Period for Backdating, system will generate proposal issue: **Backdating period should be no more than {Max Period for Backdating}**.

Underwriting Operation Rules

1. Issue status instructions: **Closed** means that the issue has been handled. **Ignored** means that the underwriter does not think the issue will bring impact to the policy. Both options will close outstanding issues.

2. When you can add non-standard endorsement, condition, and exclusion,

    - The exclusions and endorsements will be printed on the policy documents.

    - A policy can have multiple endorsements, conditions, and exclusions.

3. If there are unclosed outstanding issues in underwriting, a warning message will be displayed when you click **Make Benefit Decision**.

4. When you make underwriting decisions on benefits:

    - The system supports batch processing of the **Accepted**, **Declined** or **Postponed** benefits. If you want to

accept, decline or postpone all benefits, in the **Underwriting Decision** area of the Underwriting Main Screen, select all benefits and click **Make Benefit Decision**. Then set **Underwriting Decision** field to **Accepted**, **Declined** or **Postponed**. The decline or postpone reason will only be captured on the first benefit. However, if you want to conditionally accept all benefits, you must process them one by one.

- When you need to update the existing underwriting decisions for all benefits to the same one, if the existing underwriting decisions are different, you cannot select all of them to update them simultaneously. Instead, you must update them one by one.

5. When you click **Submit** on the **Make Decision on Benefit** page, the system proceeds as follows:

    - The system recalculates the premium as the underwriter may have changed the following information: Preferred Life Indicator, Smoker Indicator, Occupation Class, Accident Class, and Occupation. The system updates the total enforcing premium amount required when the recalculation is performed for any change of data which affects the premium. For the declined or postponed benefits, the system will not recalculate premium, but generate declined or postpone letters.
    - The system updates the underwriting decisions.
        - For New Business, if Underwriting Decision is **Conditionally Accepted** at policy level, the system does not display this underwriting decision to all the benefits as the underwriter can impose different underwriting terms for each benefit.
        - For New Business, if Underwriting Decision is **Accepted** at policy level, the system displays this underwriting decision to all the benefits attached to the main benefit upon the underwriter completes the decision update.
        - For New Business, if Underwriting Decision is **Declined** or **Postponed** at policy level, the system displays the underwriting decision to all the benefits attached to the main benefit. The decline or postpone reason will only be captured once under the main benefit.

        - For Customer Service, the underwriting decision is made at benefit level.
    - The system updates the underwriting status to **Underwriting Completed**.

6. When you click **Submit** on the Underwriting Main Screen page, the system proceeds as follows:
    - The system checks whether the underwriting status of all products is **Underwriting Completed** and all letters have been returned and settled. If not, an error message **Not all products have been underwritten** or **Not all letters have been settled** will be displayed.
7. The system checks whether the proposal or policy's underwriting limit is within the user's underwriting authority.

note

Underwriting limit for proposal or policy refers to accumulated accidental or non-accidental death and TPD sum assured of the products, disability benefit per month if any, product level if level driven, medical status and extra mortality loaded if ever underwritten. Underwriting limit for a proposal or policy is to be set based on the highest underwriting limit among all products under the proposal or policy.

- If yes, the system proceeds as follows:
    - For the accepted proposal, the system recalculates the total inforce premium amount, standard premium/extra premium with the updated data, underwriting decision will be applied immediately upon submission and the proposal will be transferred to enforcing proposal workflow.
    - For the conditionally accepted proposal, the system will generate LCA upon acceptance (Generate LCA Indicator = Y) or conditionally acceptance. When the LCA is received and confirmed, the consent information must be updated.
    - For the declined or postponed proposal, the system will generate Decline or Postpone letter and refund premium for payment.
- If no, the system escalates this proposal to senior underwriters. The proposal status remains Underwriting in Progress and the underwriting status will be

changed to Escalated. The Pending Reason will be updated to Escalated to next level.

Escalate Underwriting Rules

This section outlines the rules in underwriting escalation.

When you click **Submit**:

- If you do not have the authority to underwrite this proposal, the system escalates this proposal to senior underwriters for underwriting. The proposal status will be change to **Waiting for Underwriting**, the Pending Reason will be updated to **Escalated to next level**, and the underwriting status will be changed to **Escalated**.
- If you have the authority to underwrite this proposal, the system updates the underwriting decision according to the decision you have made. The proposal can either be declined or postponed, or it can be underwritten and then be sent for enforcement.

Update Consent for LCA Rules

This section outlines the rules in update consent.

On the Update Consent for LCA page, the default **Consent Given Date** is the current system date.

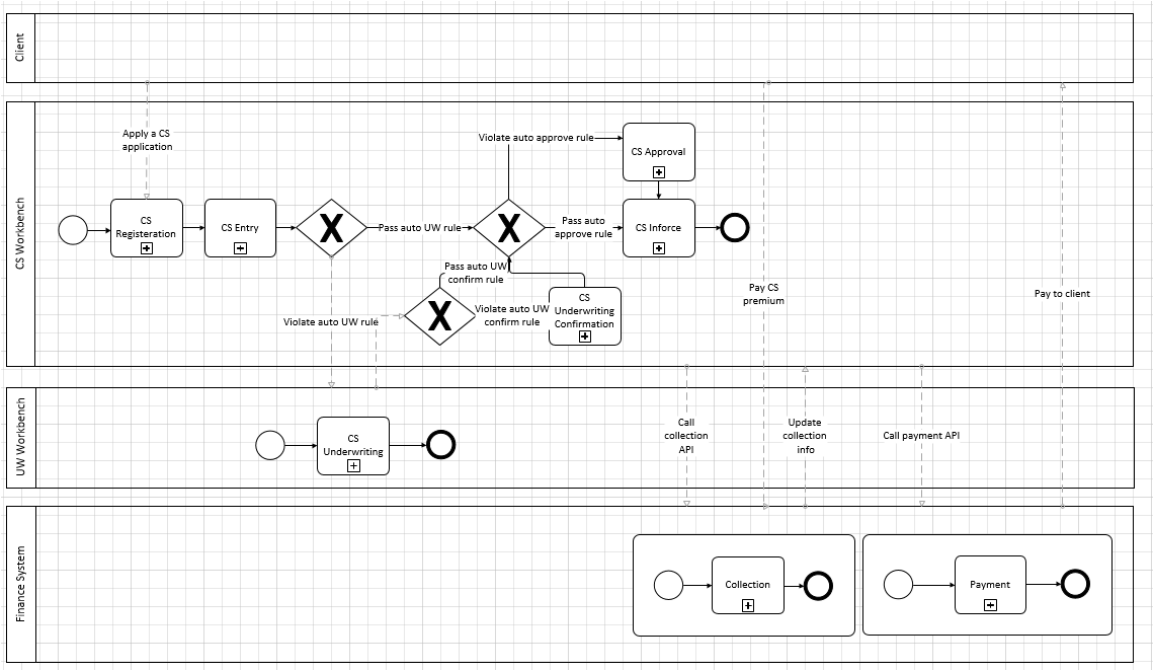

Gemini Customer Service Traditional Policy User Guide

Summarize page

Customer Service Overview

After a policy is issued, the policy details can be altered if required, such as increasing SA, adding Riders and changing occupation. This section describes how to alter a policy.

Figure 1 Customer Service Workflow

The table below lists the general process workflow of Customer Service.

Table 1 Workflow of Enforcing a Customer Service

S/N	Description
1	Before performing any policy alteration, the Customer Service (CS) user needs to register a new application for policy alteration. For details, see About Customer Service Registration.
2	After the application for policy alteration is successfully registered, the CS user can enter the application details in the CS workbench. In a single application, multiple alteration items can be input. For details, see About Customer Service Entry.
3	After application entry, system will check workflow if UW required or not. If UW required, system validate auto UW rules to perform auto UW or manual UW. If auto UW rules validated pass, no need manual UW, otherwise, the CS application will be put into manual UW pool and wait for manual UW by underwriter. For details of manual UW, see ***Underwriting User Guide***.
4	After an underwriting decision is made, system will check workflow if UW confirm is required or not. If UW Confirm required, system validate auto UW confirm rules to perform auto UW confirm or manual UW confirm. If manual

S/N	Description
	UW confirm needed, the CS user can review the underwriting decision and adjust the alteration items if necessary. For details, see About Underwriting Decision Disposal.
5	After CS application data entry or underwriting disposal, system will check workflow if approval is required or not. If the application needs to be approved, system perform auto approval rule checking to validate whether it can be auto approved pass or need manual approval. If auto approval rule validated pass, no need manual approval, otherwise the CS application will be put into CS Approval pool and wait for manual approval by CS User. For details, see About Customer Service Approval.
6	If the application generates additional fee, collection is required to enforce the application. If the money collected is enough to enforce the application, the alteration takes effect. For details, see About Customer Service Inforce.

Table 2 Optional Workflow Steps in Customer Service

S/N	Description
7	During application entry or underwriting decision disposal, the application can be rejected if required. For details, see Reject a Customer Service Application.
8	After an application is registered and before CS application inforce/take effect, it can be cancelled if required as long as the application has not taken effect. For details, see Online Application Cancellation.
9	After alteration takes effect, for some reasons, such as client request, human error made in the transaction, the transaction can be reversed. For details, see Reverse Alteration.

note

- Whether need Manual underwriting can be configured by **Rule & Rating > Configure table.**
- Whether need approval can be configured by **Rule & Rating > Configure table.**

Perform On-line Customer Service with CS Flow

About Customer Service Registration

Before performing any policy alteration, the customer Service (CS) user needs to register a new application for policy alteration.

Customer Service Registration

PREREQUISITE

The policy is already issued.

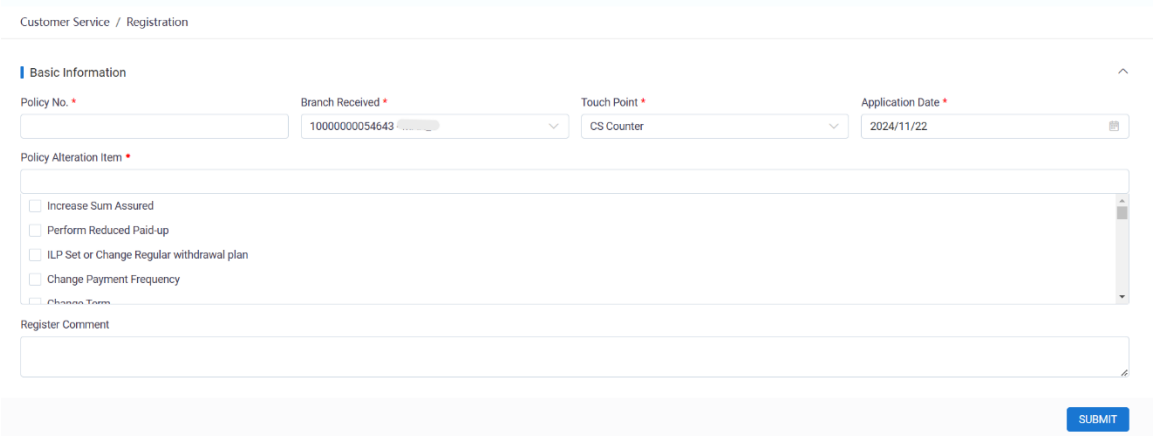

TASK

1. From the main menu, select **Customer Service > Registration**.
   STEP RESULT: The Customer Service Registration page is displayed.

note

Only the policies whose organizations that you have access to can be searched out.

Figure 2 Application Registration Page

2. On the Customer Service Registration page, enter policy number, Branch Received, Touch Point such as CS Counter.
3. In the **Policy Alterations Item** section, select one or more items to be altered.

note

For all PS alteration items, system should sort the list alphabetically (A...Z).

4. Click **Submit**.

STEP RESULT: The system prompts message: New application is registered successfully. Click **Close**, or click **Go to Application Entry** to enter application information.

About Customer Service Entry

After the application for policy alteration is successfully registered, the CS user can enter the application details in the CS workbench.

Customer Service Entry General Steps

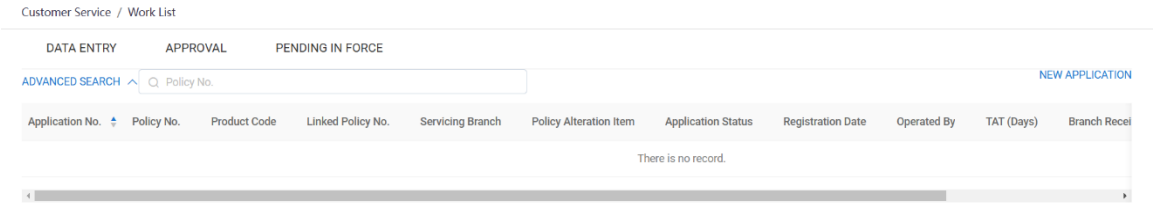

PREREQUISITE

- The application is registered successfully.
- The application status is Pending Data Entry, Processing in Progress.
- The policy is not frozen by other CS application/Claim.

TASK

1. Retrieve an application.
    - From the main menu, select **Customer Service > Work List > Data Entry.**
      RESULT: The Data Entry task pool is displayed.
    - In the Data Entry task pool, perform quick search by policy number or advanced search by entering criteria, and then click **Search**.
      RESULT: The matching application records are displayed.

Figure 3 Customer Service - Work List - Data Entry

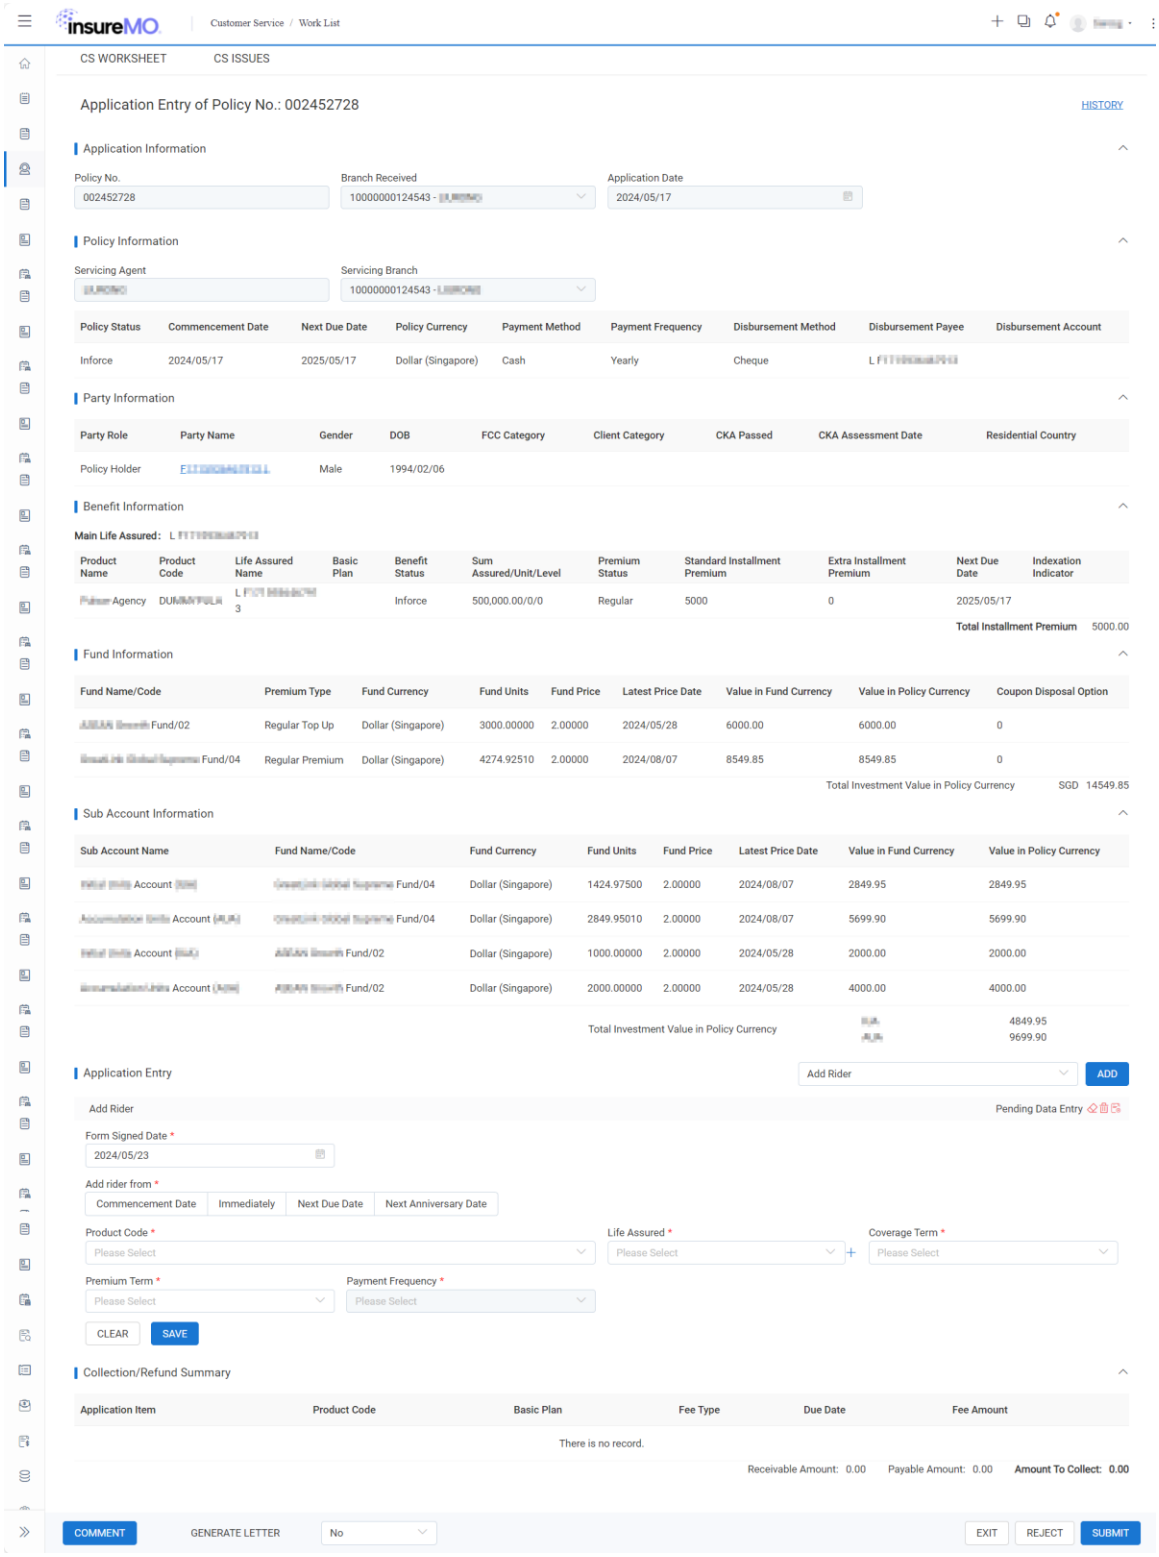

note

Only the policies whose organization that you have access to can be searched out. Servicing Branch must be the organization that you have access to.

1.

    - In the Application No. column, click the destination application.
      RESULT: The Application Entry page is displayed.

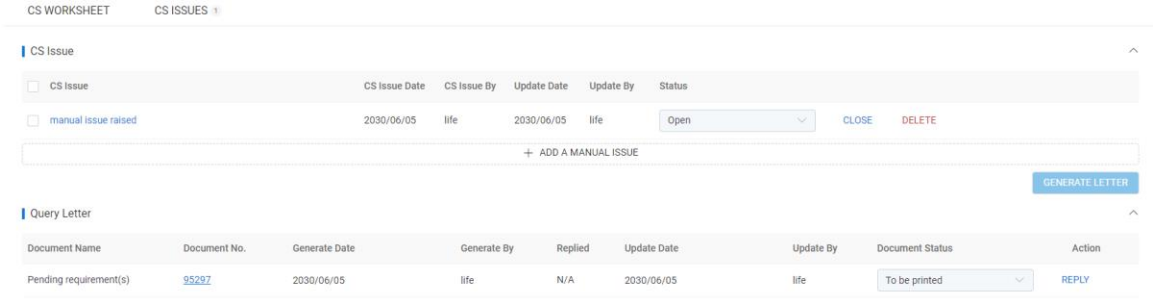

Figure 4 Application Entry Page

2. On the Application Entry area, update the basic information of application if necessary.

3. Take action according to your decision:
    - To add a policy alteration item, select an item from the **Policy Alteration Item** drop-down list, and then click **Add**.
    - To delete a policy alteration item, select the record, and then click **Delete**.
    - To reject a policy alteration item, select the record and then click **Reject**.
    - To enter application detail information directly, select an alteration item.
4. Enter the application details.
   a. On the corresponding item alteration section, alter the item and click **Apply Change.**
   b. If the application item is acceptable, go to next step.
   c. If need to add a policy alteration item, select an item from the **Policy Alteration Item** drop-down list and then click **Add**.
   d. To delete a policy alteration item, click **Delete** at the end of alteration item title.
   e. To clear the change of a policy alteration item in Process in Progress or Complete state, click **Eraser** at the end of alteration item title.
   f. In the Collection/Refund Summary section, display fee changes to collect or refund per alteration item and product.
   g. The **Application Entry Comments** section, view and update the application entry comments.
5. Click **CS Issues**. Create a manual issue and click **Generate Letter** to generate CS query letter.
   RESULT: The query letter is generated with initial status To be printed.

Figure 5 CS issue tab

6. Click **Reply** to update document status after receiving document from customer.
7. Click **Submit**.
   RESULT: The system check workflow setting to decide next step.
8. At the bottom of this page, there is a field called "**Generate Letter**" that allows users determine whether to generate the PS endorsement after PS is inforce by selecting **Yes** or **No**:
   a. If Generate Letter = Yes, system generates the letter data as normal.
   b. If Generate Letter = No, system doesn't generate the PS letter data after PS is inforce.

note

The default display value is 'No' and allow user to change the indicator.

- If manual underwriting is required, the system pops up a message: *The application status changed to Pending Underwriting*. Then the application will be sent to the underwriting Work List.
- If manual approval is required, the system pops up a message: *The application status has changed to Pending Approve*. Then the application will be sent to Customer Service Work List.

Customer Service Entry by Alteration Types

Add Rider

This section describes how to add rider for both traditional and ILP policy.

PREREQUISITE

- The policy status is Inforce.
- The premium status of main product is not Premium Waived.
- For the investment linked policy, it does not have Potential Lapse Date.
- For the investment linked policy, it does not have miscellaneous debts.
- For the investment linked policy, it does not have pending fund transactions.

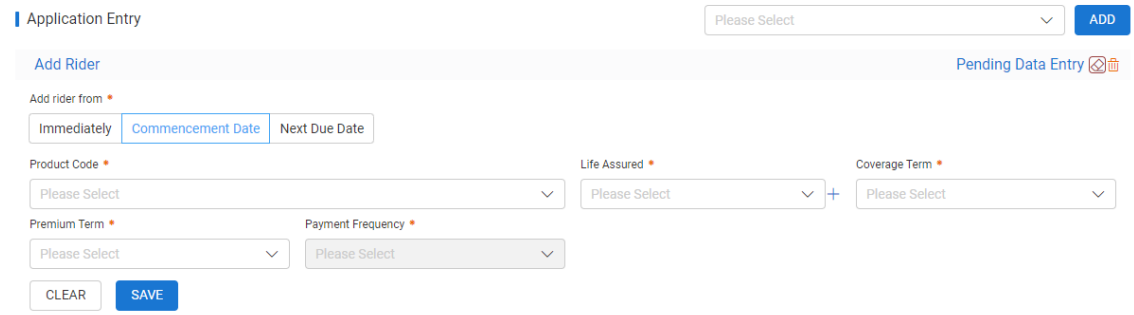

TASK

1. On the Application Entry area, select the **Add Rider** alteration item, and then click **Add**.

Or register application entry for Add Rider from **Registration** Main Menu or **Register New Application** button in **Customer Service > Work List.**
STEP RESULT: The Add Rider alteration item is displayed.

2. On the Add Rider **Alteration Item Information** section, click the **Add Rider from**: Immediately or Commencement Date or Next Due Date.
STEP RESULT: The Validity Date is displayed if Add Rider Immediately.

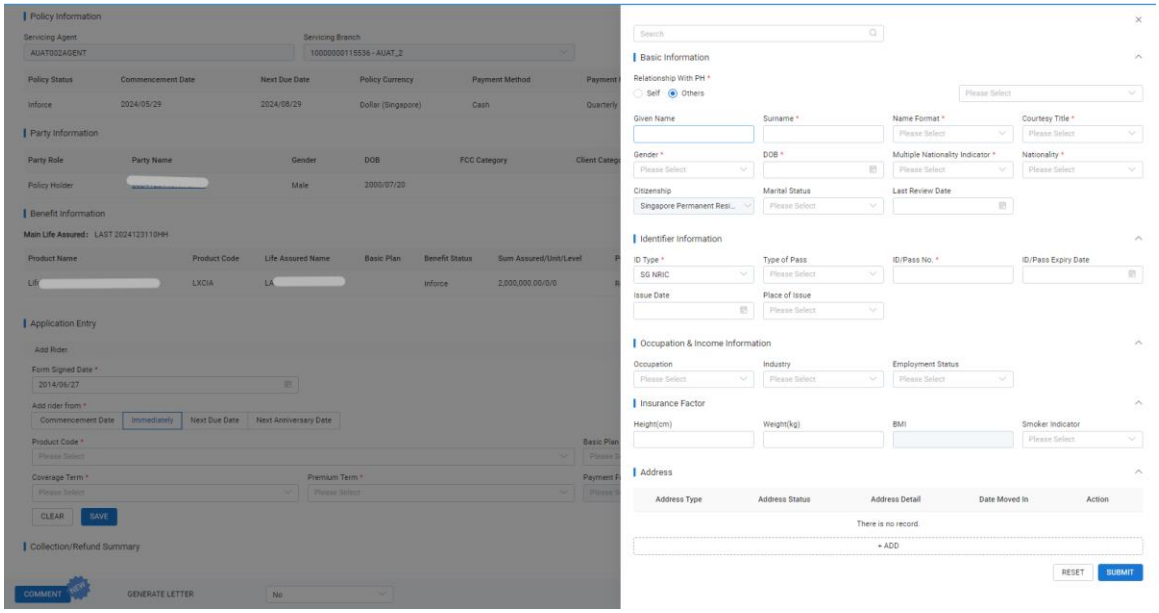

Figure 6 Application Entry - Add Rider

3. On the Benefit Information Entry page, select a rider and then enter detailed information. The new added rider can be non-waiver benefit or a waiver benefit or unit deduction rider. For instruction about how to add a benefit, refer to Date Entry in New Business User Guide.

    - If the new rider is added for a new LA, then click **+** and a new page pops up, enter the new LA's information on the page.

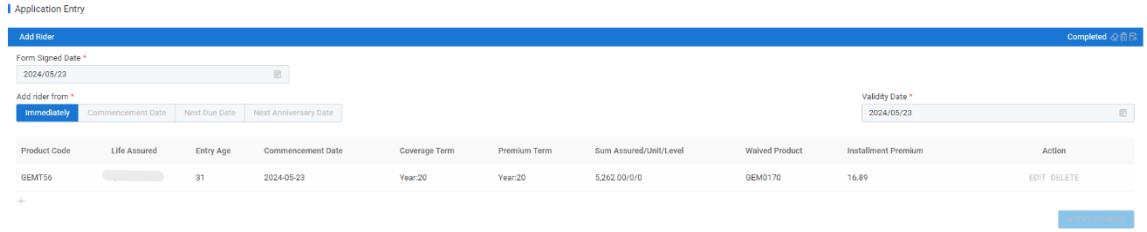

Figure 7 – new LA's information

4. After all the required information is entered, click **Save**.
   STEP RESULT: The newly added rider will be displayed in the **Add Rider** section.

5. Click **Apply Change**.
   STEP RESULT:
   System perform rule validation. If validation passed, update Add Rider alteration item into Completed state.
   Amount to Collect is generated in **Collection/Refund Summary** section.

Figure 8 Application Entry - Add Rider - After Change

Apply Policy Loan

This section describes how to perform Apply Policy Loan.

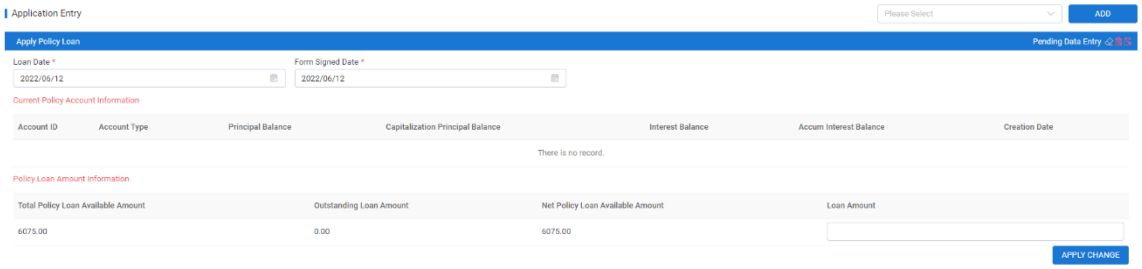

PREREQUISITE

- The policy status is Inforce.
- The policy does not have Potential Lapse Date.
- For the investment linked policy, it has unit.
- For the investment linked policy, it does not have any Pending Fund Transaction.
- Policy Loan is allowed.

TASK

1. On the Application Entry area, select the **Apply Policy Loan** alteration item, click **Add**.
   Or register application for **Apply Policy Loan** from **Registration** Main Menu or **Register New Application** button in **Customer Service > Work List.**
   STEP RESULT: The Apply Policy Loan section is displayed.

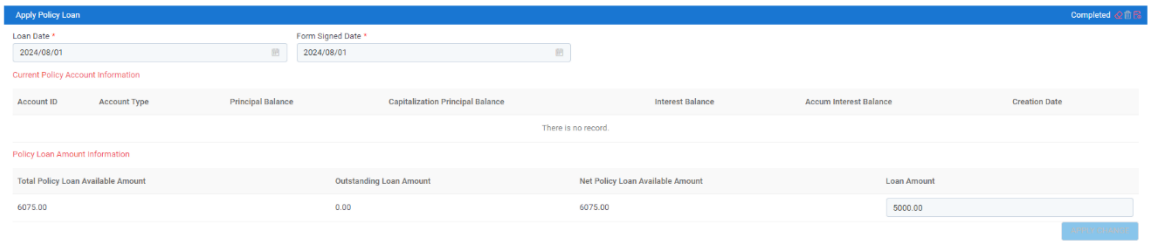

Figure 9 Application Entry - Apply Policy Loan

2. In the Apply Policy Loan **Alteration Item Information** section, enter the **Loan Date and Loan Amount**.

3. Click **Apply Change.**
   STEP RESULT: System perform rule validation. If validation passed, update Apply Policy Loan alteration item into Completed state.

Figure 10 Application Entry - Apply Policy Loan - After Change

Cancellation (Void Policy)

If the Life Assured dies by suicide, while sane or insane, within one (1) year from the Date of Issue of this Policy, or the last Reinstatement Date, or the effective date of any increase in Sum Assured, whichever is later, this Policy will be terminated and no Benefits will be payable. If such an event occurs, we will refund the total Premiums paid (without interest) from the Commencement Date, or if this Policy has been reinstated, the total Premiums paid (without interest) from the Reinstatement Date.

This section describes how to perform Cancellation.

PREREQUISITE

- The policy performed reinstatement before cancellation.
- User confirmed only refund the total premium paid from last lapse date.

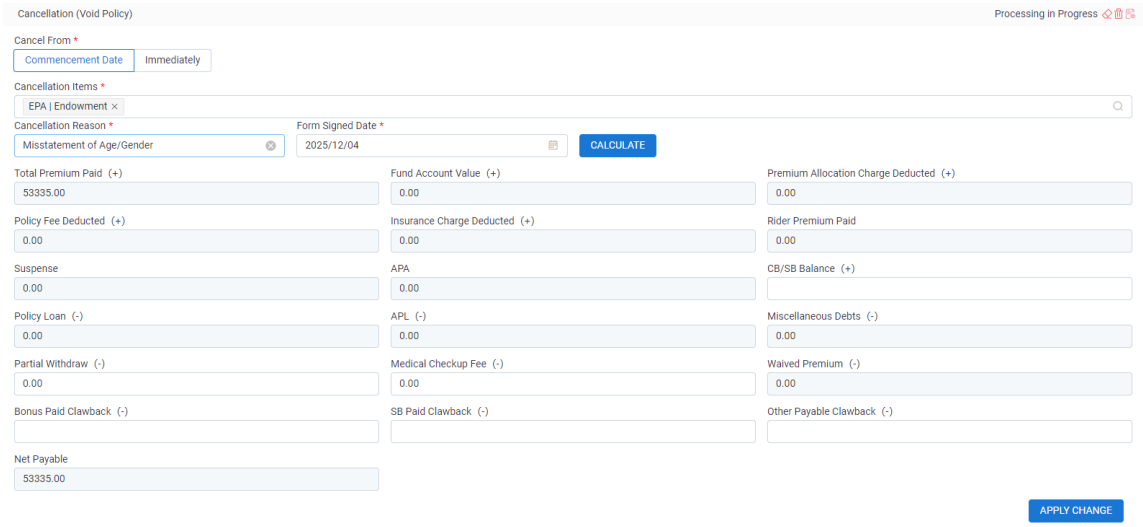

TASK

1. On the Application Entry area, select the **Cancellation (Void Policy)** alteration item, click **Add**.
   Or register application for **Cancellation (Void Policy)** from **Registration** Main Menu or **Register New Application** button in **Customer Service > Work List.**
   STEP RESULT: The Cancellation (Void Policy) section is displayed.

2. In the Cancellation (Void Policy) **Alteration Item Information** section, click the type of effective date: **Immediately** or **Commencement Date**, enter the validity date, and then click **Calculation** to perform the refund premium calculation.
   STEP RESULT: The Validity Date is displayed if Cancellation Immediately.

3. Click **Calculate.**
   STEP RESULT: System displays full screen of cancellation item for user to do adjustment.

Figure 11 Cancellation entry UI

4. Click **Apply Change**.
   STEP RESULT: System displays refund amount in Collection and Refund summary section and update alteration status to “complete”.

Change Assignment

Life insurance is considered property. Therefore, insurance policies are legally assignable to another party in part or in full including all rights. For some policies, as the policyholder is under age, he/she can assign the policy to his/her parent as the policyholder. In this case, the child is the assignor and the parent is the assignee. An

assignment encompasses the transfer of rights held by one party (the assignor) to another party (the assignee).

This section describes how to change assignment, including changing the assignment type, adding an assignee, deleting an assignee, and changing assignee information.

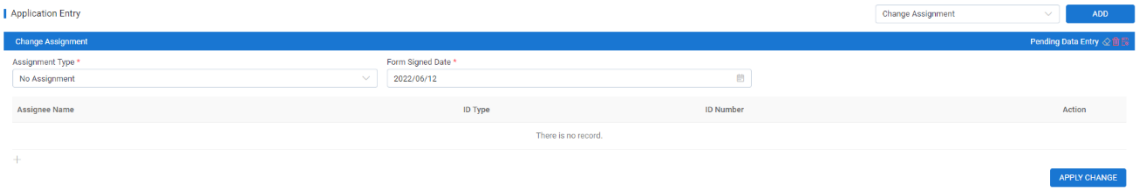

PREREQUISITE

- The policy status is not terminated.
- The policy does not have any beneficiary.
- Assignment is allowed for this policy, that is, in the product table, the Allow Assignment indicator for the main plan of the policy should be set to **Yes**.

TASK

1. On the Application Entry area, select the **Change Assignment** item and then click **Add**.
   Or register application for **Change Assignment** from **Registration** Main Menu or **Register New Application** button in **Customer Service > Work List.**
   STEP RESULT: The Change Assignment section is displayed.

Figure 12 Application Entry - Change Assignment

2. In the **Change Assignment Alteration** section, you can change the assignment type, add an assignee, delete an assignee, or change assignee information:
   - To change the assignment type, see Step 3.
   - To add an assignee, see Step 4.
   - To delete an assignee, see Step 5.
   - To change assignee information, see Step 6.
3. To change the assignment type, select an assignment type from the drop-down list.

note

Absolute Assignment: An irrevocable transfer of complete ownership of a life insurance policy from one party to another. Contrast with collateral assignment.
Collateral Assignment: A temporary transfer of some of the ownership rights in a life insurance policy as collateral for a loan. The transfer is made on the condition that upon payment of the debt for which the contract is collateral, all transferred rights shall revert back to the original owner.
Contrast with absolute assignment.

4. To add an assignee, follow these steps:
   a. Click **+** to **Add Assignee**.
   RESULT: The Party Identification page is displayed.
   b. On the Party Identification page, search or create a party as the assignee.

note

The contact information of the assignee must be entered.

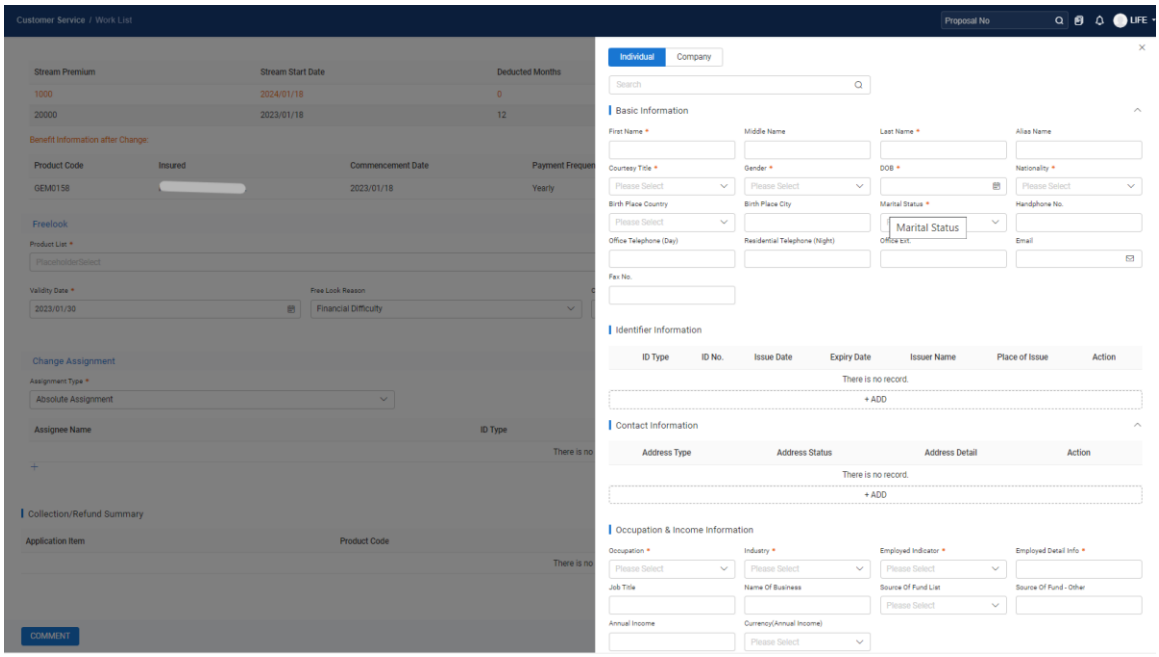

c. Click **Submit**.

RESULT:

- The system allocates the assignee role to the party automatically.
- The assignee record will be listed on the Change Assignment page.

5. To delete an assignee, click **Delete** behind the Assignee.
6. To change assignee information, click **Edit** behind the Assignee.
   RESULT: The Assignee Information page is displayed.

Figure 13 Assignment Information

7. On the Individual and Company Customer Info page, change the assignee information, and then click Submit.
   RESULT: The Assignee Information is displayed Change Assignment section.

8. After you finish the assignment change, click **Apply Change**.
   STEP RESULT: System perform rule validation. If validation passed, update Change Assignment alteration item into Completed state.

Change Birth Date or Gender

This section describes how to change the birth date and gender of the life assured at policy level.

PREREQUISITE

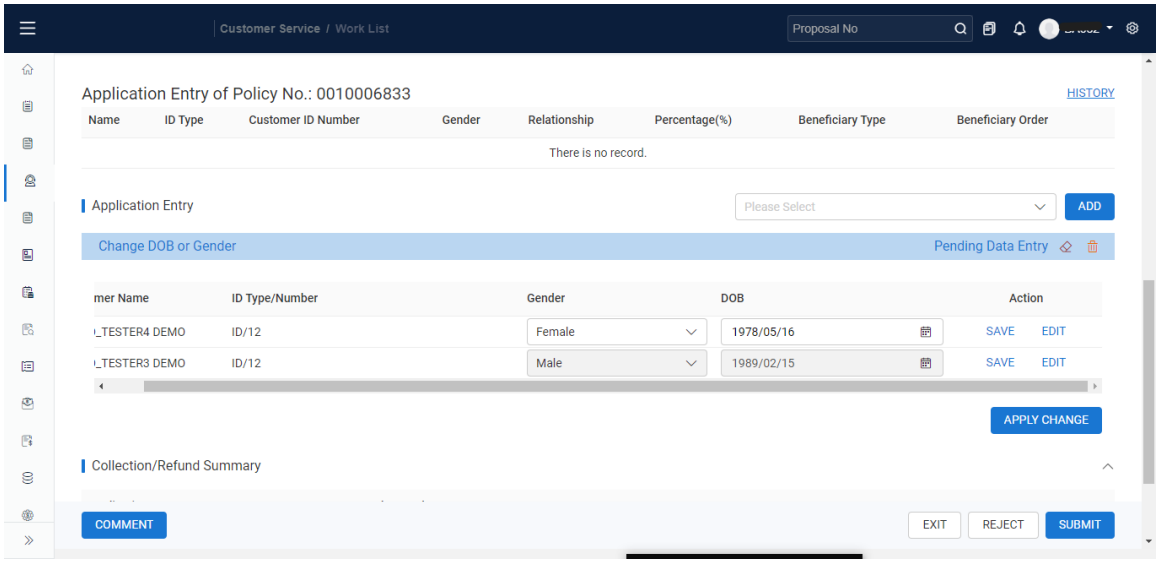

The policy is not terminated.

TASK

1. Register **Change Birth Date or Gender** from **Registration** in **Customer Service** Main Menu or **Register New Application** button in **Customer Service > Work List.**
   STEP RESULT: The success window pops up.

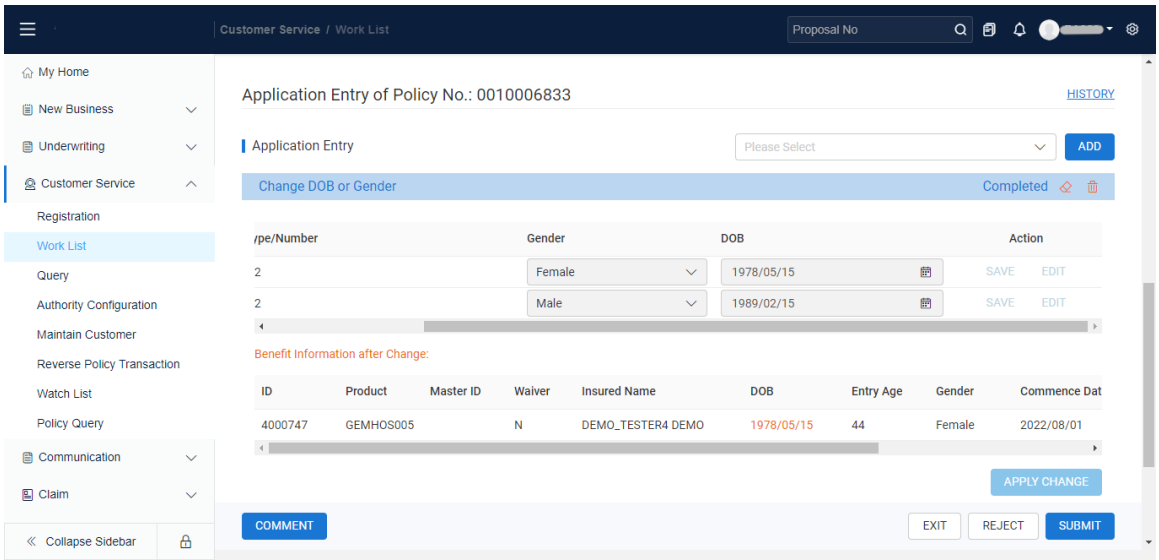

2. Select **Go To Application Entry** button or select the application in **Work List**, then click **EDIT** in **Application Entry** section.
   STEP RESULT: The **Gender and DOB** are editable.

Figure 14 Change Birth Date or Gender

3. Change Birth Date or Gender and click **Save**, then click **Apply Change**.
   STEP RESULT: The **Benefit Information after Change** section is displayed.

Figure 15 Change Birth Date or Gender - Information After Change

4. Click **Submit** button.
   STEP RESULT:

   - System perform rule validation. If validation passed, update Change Birth Date or Gender alteration item into Completed state.

- The Collection or Refund record is displayed in Collection/Refund section if any.
- Modify the amount to collect or refund.

Change Beneficial Owner

This section describes how to change the beneficial owner at policy level.

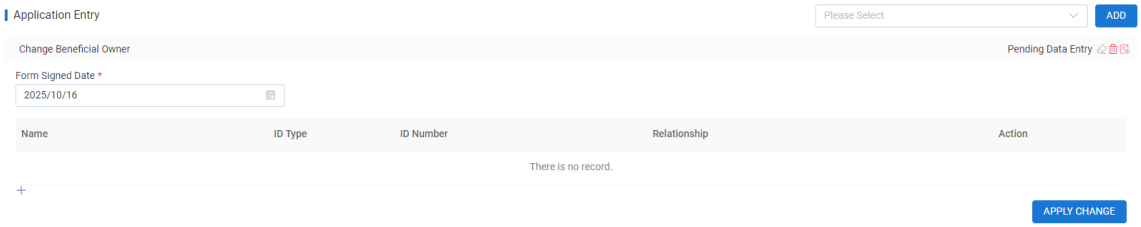

PREREQUISITE

The policy is not terminated.

TASK

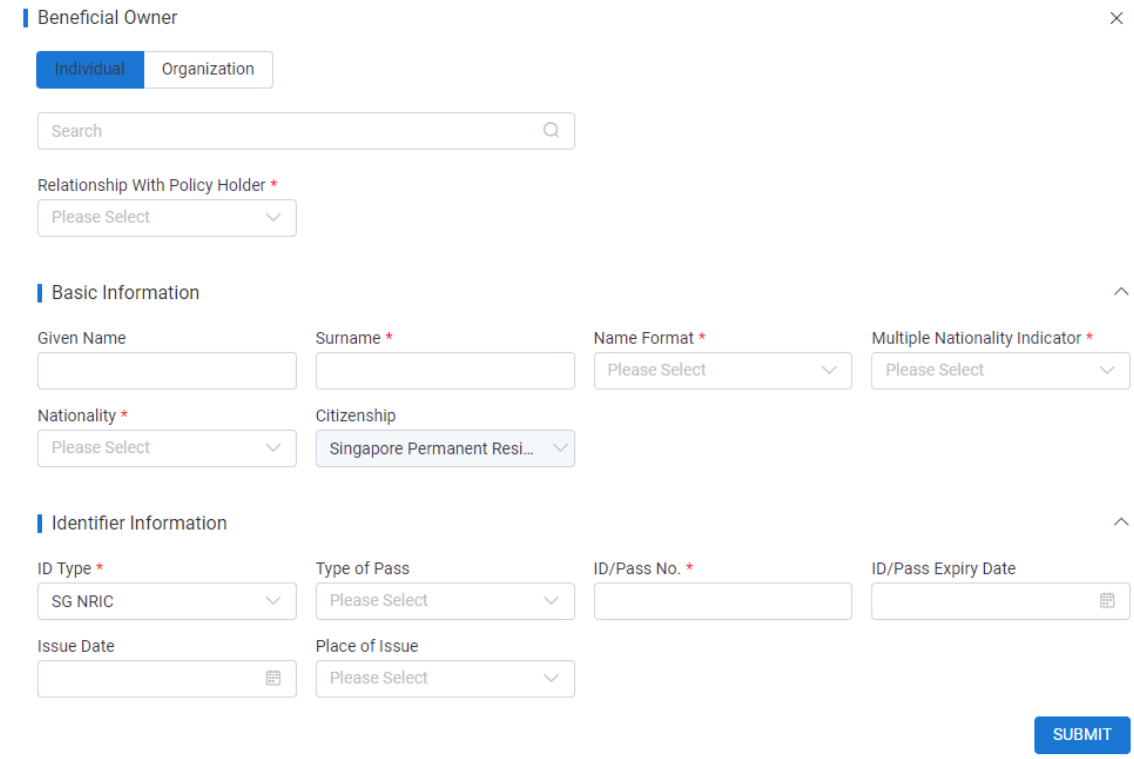

1. On the Application Entry area, select the change Beneficial Owner item, and then click **Add**.
   Or register application for **Change Beneficial Owner** from **Registration** Main Menu or **Register New Application** button in **Customer Service > Work List.**
   STEP RESULT: The Change Beneficiary Owner section is displayed.

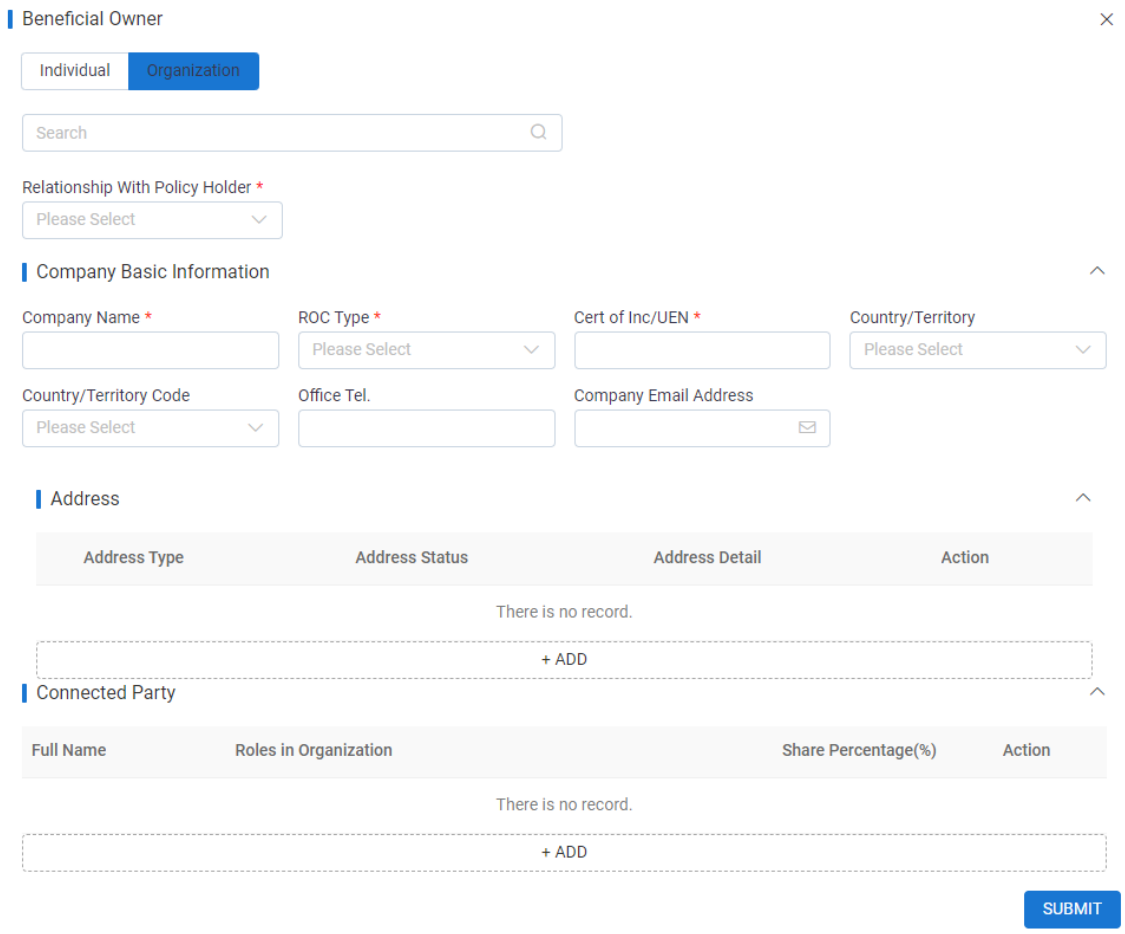

Figure 16 Application Entry - Change Beneficial Owner

2. On the Change Beneficial Owner **Alteration Item Information** section, click **+** to add **New Beneficial Owner**.
   STEP RESULT: The New Beneficial Owner Entry page is displayed, which has tabs for both “individual” and “company” customer to select from.

Figure 17 Beneficial Owner Entry Page

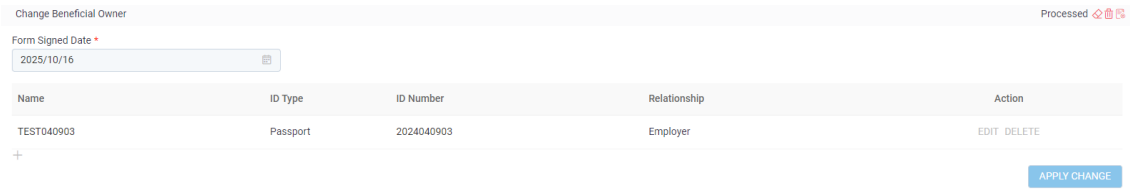

3. On the Beneficial Owner Entry page, search or create a party as the new beneficial owner, and then click **Submit**.
   STEP RESULT: The details about the new beneficial owner are displayed in the **New beneficial owner Information** section.

4. Click **Apply Change**
   STEP RESULT: update Change beneficial owner alteration item into Processed state.

Figure 18 Change Policy Holder - After Change

Change Benefits

This section describes how to change the benefits.

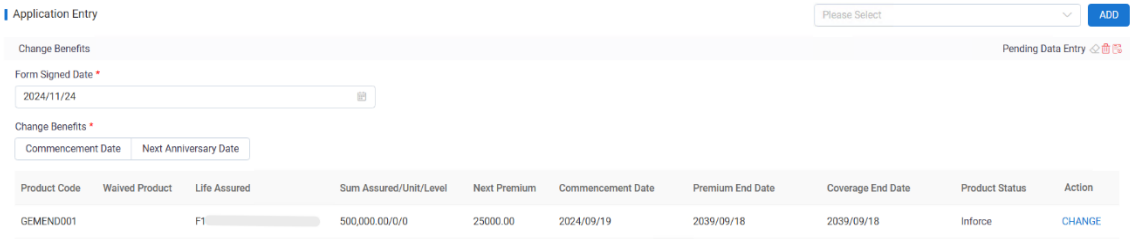

PREREQUISITE

- The policy is without indexation.
- The policy is not investment linked.
- The policy is inforce.
- The policy is not an issue without premium policy.

TASK

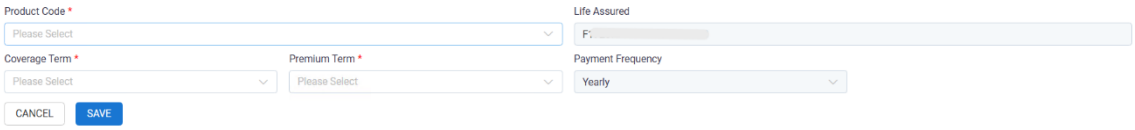

1. On the Application Entry area, select the change benefits item, and then click **Add**.
   Or register application for **Change Benefit** from **Registration** Main Menu or **Register New Application** button in **Customer Service > Work List.**
   STEP RESULT: The Change Benefit section is displayed.

Figure 19 Change Benefit

2. Key in Form Signed Date.
3. Select to change benefit from **Commencement Date** or **Next Anniversary Date**.
4. On the benefit table, select a benefit and then click **Change**.
   STEP RESULT: The new benefit entry section is displayed.

Figure 20 New benefit entry

5. Select product code and enter detail information. Life Assured and Payment Frequency are disable to be edit. Click **Save**. The revised benefit information is displayed in **Benefit Information After Change** section. The current and

next premium is recalculated based on the new benefit information. If the benefit has waiver, the waiver's premium is recalculated accordingly.

6. Click **Apply Change** after changing all the benefits required.
   STEP RESULT: System perform rule validation. If validation passed, update Change Benefits alteration item into Completed state. Amount to Collect is generated in Collection/Refund Summary section.

Change Contact Information

This section describes how to change the contact information of policy holder and the life assured.

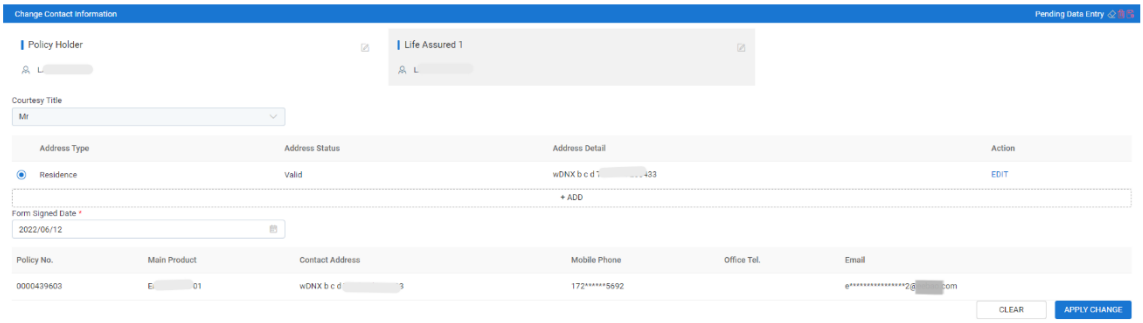

PREREQUISITE

The policy is not terminated.

TASK

1. On the Application Entry area, select the change contact information item, and then click **Add**.
   Or register application for **Change Contact Information** from **Registration** Main Menu or **Register New Application** button in **Customer Service > Work List.**
   STEP RESULT: The Change Contact Information section is displayed.
2. On the Change Contact Information **Alteration Item Information** section, select a Policy Holder or Life Assured and then click **Edit**.
3. *STEP RESULT:* The Change Contact Information section is displayed.

Figure 21 Change Contact Information

4. In the Change contact information section, users can change Mobile Phone, Office Tel., Email Address, Detail Addresses for selected Policy Holder or Life Assured.

5. On the Change contact information section, click **Apply Change**.
   Step Result:
   - The updated contact information is saved and collapsed.
   - A message displayed the to specify the update is for policy holder or life assured for certain policy.
   - The Change Contact Information alteration item is in Completed state.

Change Discount Type

This section describes how to change premium discount type of benefits.

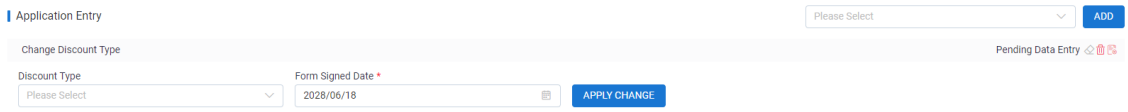

PREREQUISITE

- The policy is without indexation.
- The policy is not terminated.
- The policy is not an issue without premium policy.

TASK

1. On the Application Entry area, select the change discount type item, and then click **Add**.
   Or register application for **Change Discount Type** from **Registration** Main Menu or **Register New Application** button in **Customer Service > Work List.**
   STEP RESULT: The Change Discount Type section is displayed.

Figure 22 Change discount type

2. On the Change Discount Type **Alteration Item Information** section, select discount type and click **Apply Change**.
   Step Result:
   - System perform rule validation. If validation passed, update Change Discount Type alteration item into Completed state.
   - The **Information after Change** section is displayed.

Change Disbursement Method

This section describes how to change payment method.

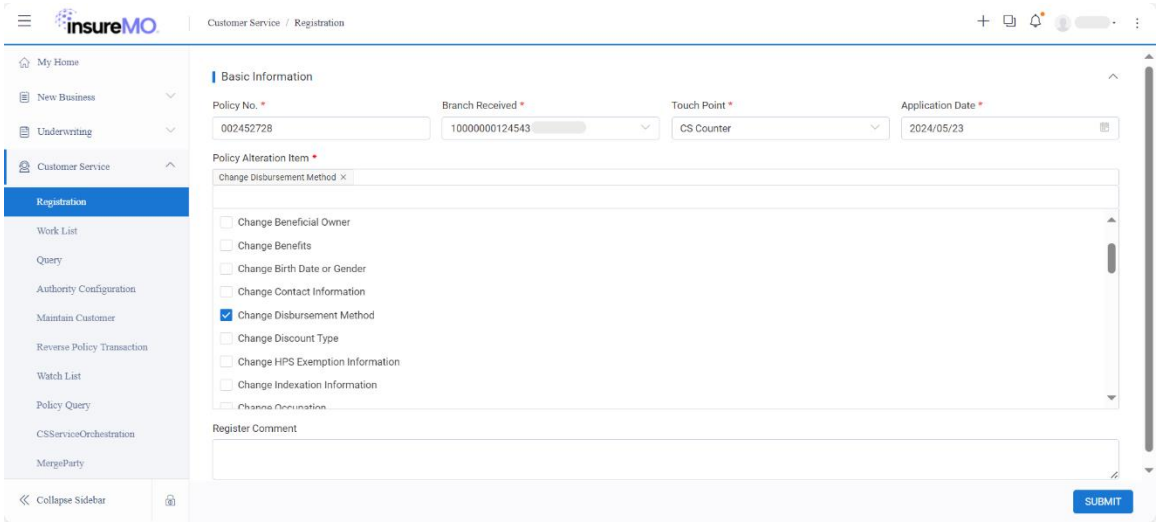

PREREQUISITE

The policy is not terminated.

TASK

1. Register **Change Disbursement Method** in Customer Service Main Menu or Register **New Application** button in **Customer Service > Work List**.
   STEP RESULT: The success window pops up.

Figure 23 Customer Service Registration - Change Disbursement Method

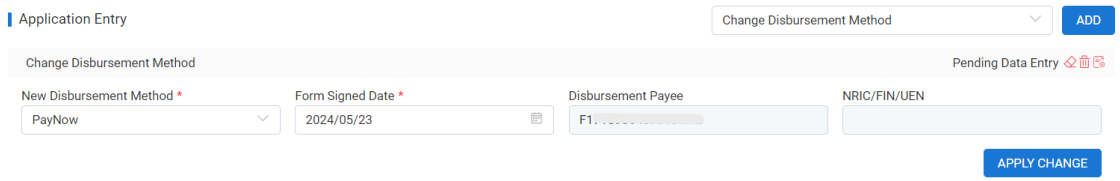

2. Select **Go To Application Entry** button or select the application in **Work List**, then, on the **Change Disbursement Method Application Entry** section, select new disbursement method in the dropdown list.

note

Select **PayNow** in **New Disbursement Method,** then **NRIC/FIN/UEN** referred to refund payee's ID No. (NRIC/FIN for individual, UEN for company) will automatically display on the page; currently, only the selection of "PayNow" will show this field, not the other methods.

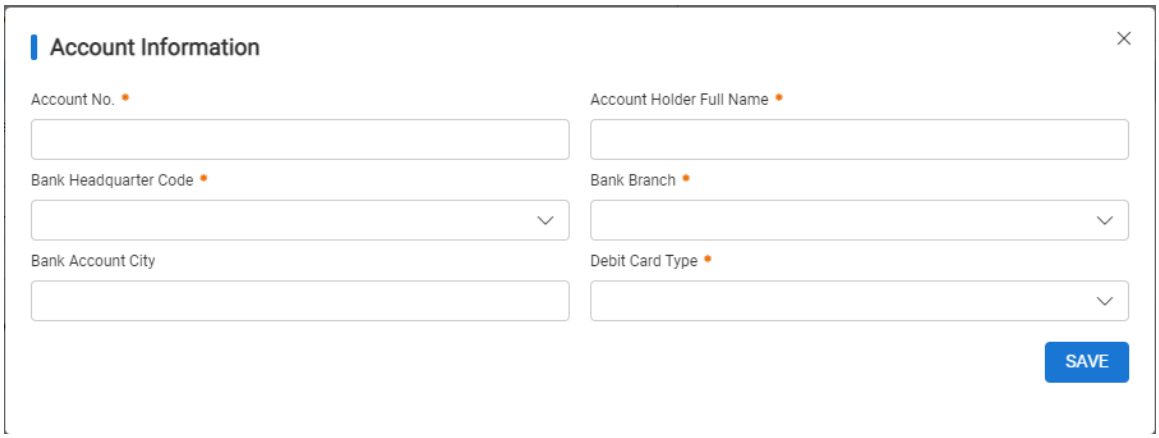

Figure 24 Change Disbursement Method - PayNow

2.

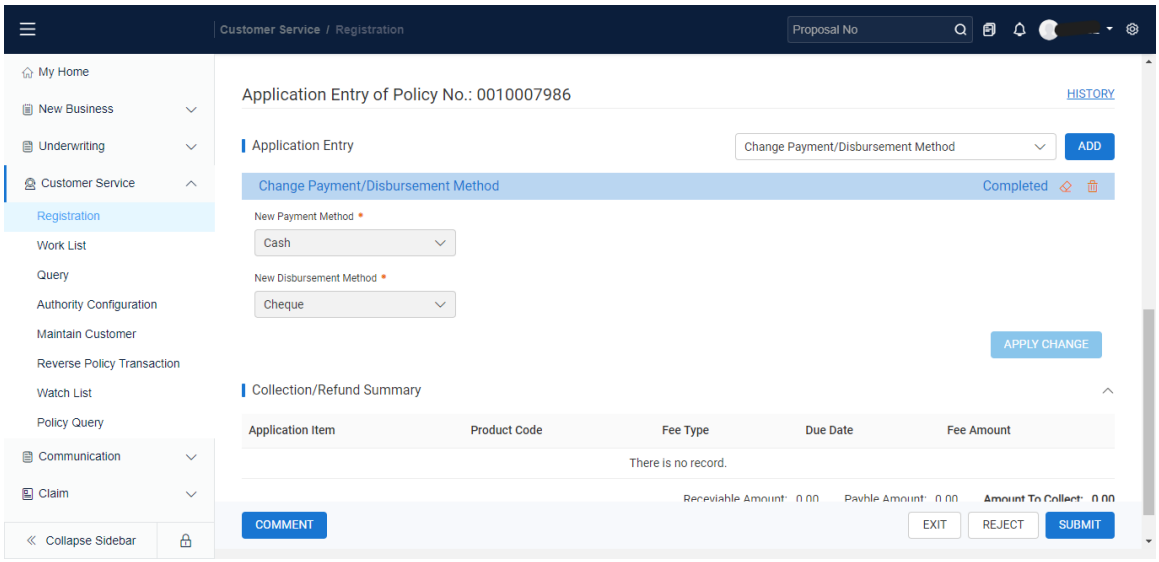

- *Select **Debit Card** or **Credit Card** in **New Disbursement Method** and the **Account Information** section is dramatically displayed below. User can **Add** new account or **edit, delete** the existing account.*

Figure 25 Change Disbursement Method – Add Account Information for Debit Card or Credit Card

3. Click **Apply Change**
   STEP RESULT:
   System perform rule validation. If validation passed, update **Change Disbursement Method** alteration item into Completed state.

Figure 26 Change Disbursement Method - After Change

Change HPS Exemption Information

This section describes how to change HPS exemption information.

PREREQUISITE

- For new business process, system should default the HPS Exemption Indicator and Start Date as blank in backend. There's no fields added on NBU UI.

TASK

1. On the Application Entry area, select the change HPS exemption information, and then click **Add**.
   Or register application for **Change HPS Exemption Information** from **Registration** Main Menu or **Register New Application** button in **Customer Service > Work List.**
   STEP RESULT: The change HPS exemption information section is displayed.

Figure 27 Change HPS Exemption Information

2. On the Change HPS Exemption Information Item Information section, select HPS exemption indicator and click **Apply Change**.
   a. If the HPS Exemption Indicator= A-Approved, the Start Date is mandatory input.

b. If the HPS Exemption Indicator= Blank (Please Select), system gray off and clear start date.
STEP RESULT:

- The HPS Exemption Indicator updated in the backend.
- If the HPS Exemption Indicator= A-Approved, when registering other POS transactions, system should popup a warning message to inform user.

Change Indexation Information

This section describes how to change indexation information. The change is performed at benefit level.

PREREQUISITE

- Policy is not terminated.
- Policy is not suspended.
- There is at least one benefit with indexation feature.

TASK

1. On the Application Entry page, select the Change Indexation Information alteration item to display the Change Indexation Information page.
2. In the Validity Date field, enter the validity date.
3. Select a benefit and then click **Change Indexation Information**.
4. Change the indexation type and the corresponding indexation calculation basis will be changed automatically. Then click **Apply Change**.
5. The new benefit information is displayed in the Benefit Information after Change area. Click **Submit.**

Change Occupation

This section describes how to change the occupation and occupation class of the life assured.

PREREQUISITE

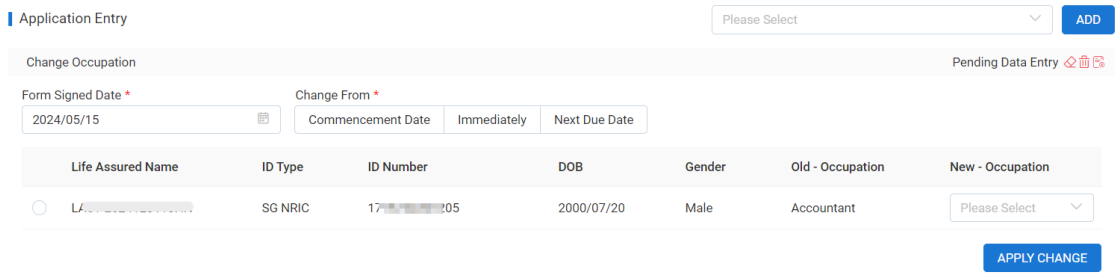

- The policy is not terminated.

- The current benefit premium should be related to occupation class, otherwise please go to “Maintain Customer” to change occupation directly.

TASK

1. On the Application Entry area, select the change occupation item, and then click **Add**.
   Or register application for **Change Occupation** from **Registration** Main Menu or **Register New Application** button in **Customer Service > Work List.**
   STEP RESULT: The Change Occupation section is displayed.

Figure 28 Application Entry - Change Occupation (for traditional policy/for ILP)

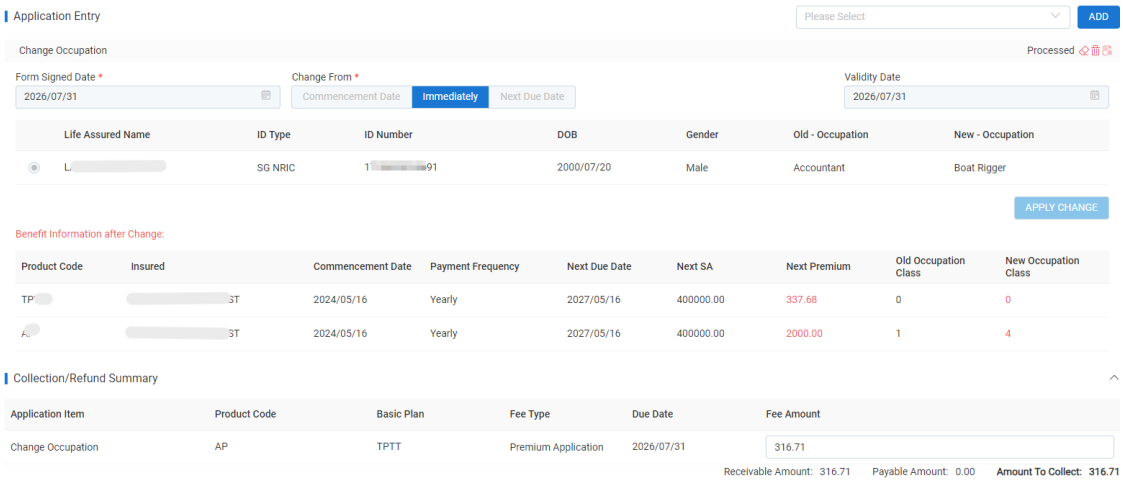

2. On the Change Occupation **Alteration Item Information** section, select Change from as **Commencement Date (only for traditional policy)/Immediately** or **Next Due Date**.

3. Select New - Occupation for one or multiple Life Assureds, and then click **Apply Change**.
   STEP RESULT:

   - System perform rule validation. If validation passed, update Change Occupation alteration item into Completed state.
   - The **Information after Change** section is displayed.

Figure 29 Change Occupation - After Change (for traditional policy/for ILP)

4. The Collection or Refund record is displayed in Collection/Refund section if any. Modify the amount to collect or refund, and then click **Submit**.

Change of Benefit Level (Health)

This section describes how to change the benefit level for health policy.

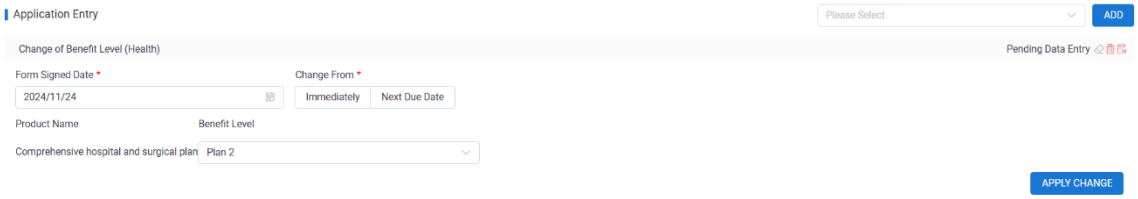

PREREQUISITE

- Policy status is Inforce.
- Policy premium status is regular.
- Policy is not suspended by CS/Claim.
- Policy is not unit-linked.

TASK

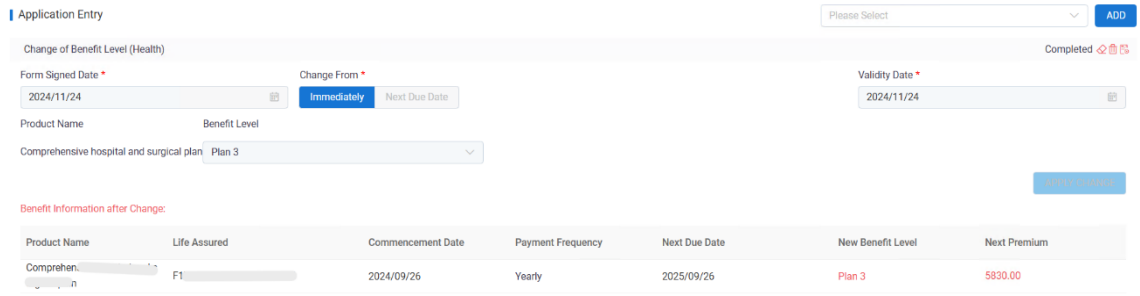

1. On the Application Entry area, select the change of benefit level (health) alteration item, and then click **Add**.
   Or register application for **Change of Benefit Level (Health)** from **Registration** Main Menu or **Register New Application** button in **Customer Service > Work List.**
   STEP RESULT: The change of benefit level (health) is displayed.

Figure 30 Application Entry – Change of Benefit Level (Health)

2. On the Application Entry section, select change from **Immediately** or **Next Due Date**. If choose to change from Immediately, key in the **Validity Date**.
3. Select the new benefit level.
4. Click **Apply Change**.
   STEP RESULT:
   - The new benefit information is displayed in the **Benefit Information after Change** section.
   - The Collection/Refund record is generated and displayed in Collection/Refund section.

Figure 31 Change of Benefit Level (Health) - After Change

5. On the Collection/Refund section, view the amount to be collected, modify it, and then click **Submit**.

Change Payer

PREREQUISITE

- The policy is not an **Issued without Premium** policy.

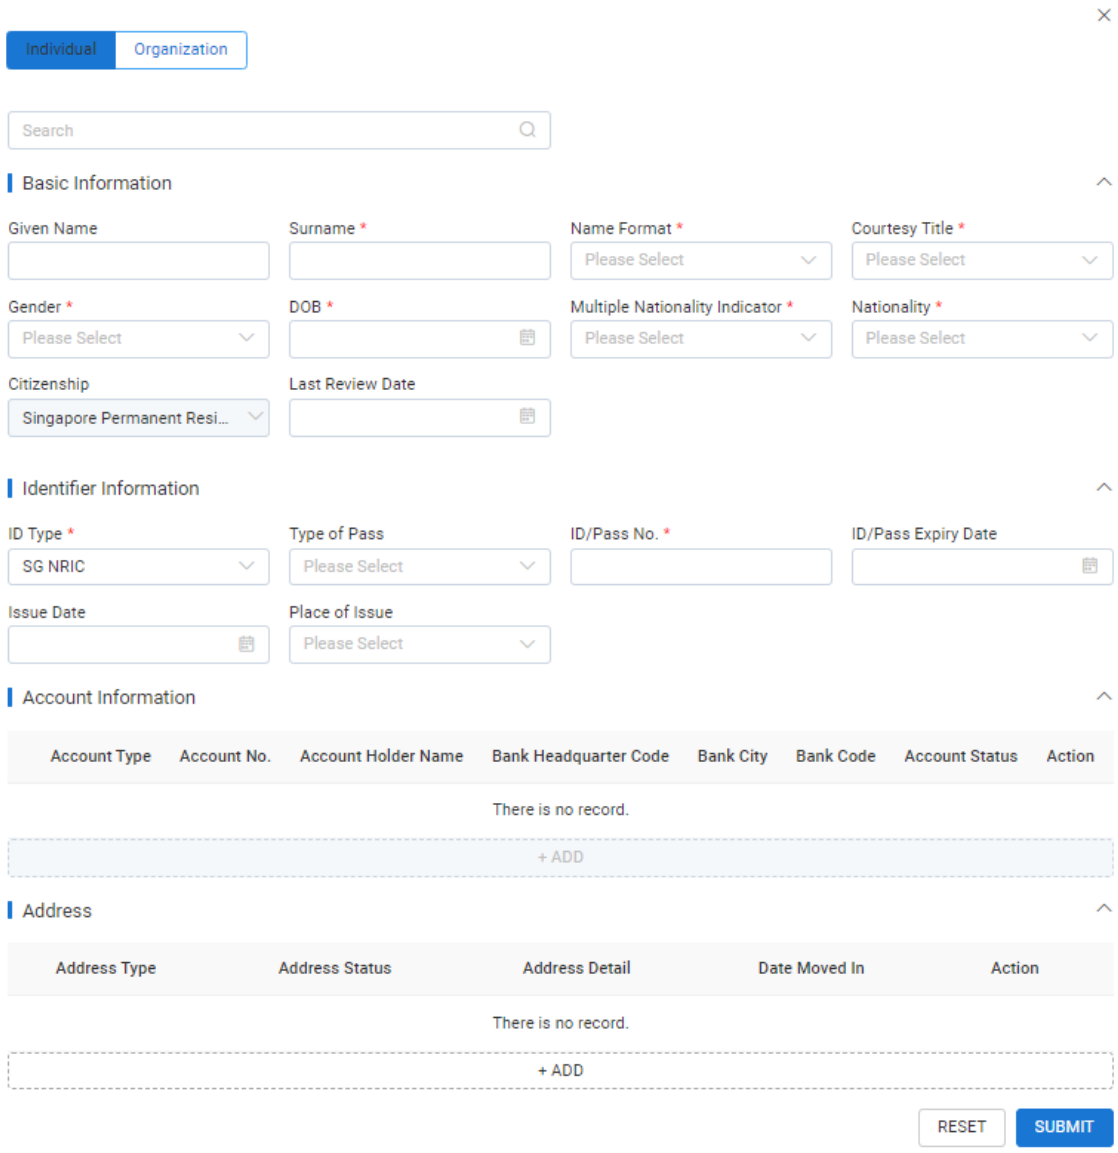

TASK

1. On the Registration page, select Change Payer item and click **Submit**.

2. Click Go to application entry.
   STEP RESULT: The alteration item status is changed to Processing in Progress.

3. In the Application Entry->Change Payer area, click **+** to enter the new premium payer information, then system will go to payer information entry page as below:
   STEP RESULT: The new premium payer information will be displayed in the Change Payer area, which has tabs for both “individual” and “company” proposers to select from.

Figure 30 New payer information

4. Click **Apply Change** and **Submit**.

Change Payment Frequency

This section describes how to change payment frequency.

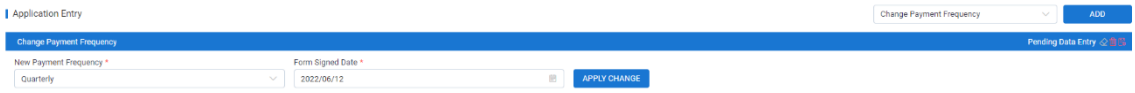

PREREQUISITE

- For traditional policies:
    - The policy risk status must not be Terminated.
    - At least one benefit of the policy is regular premium (Yearly, Half-yearly, Quarterly, or Monthly).
- For investment linked policies:
    - The policy risk status is in-forced.
    - The policy does not have PLD.
    - At least one benefit of the policy is regular premium (Yearly, Half-yearly, Quarterly, or Monthly).
    - Next Premium Due Date based on old frequency is also a premium due date of new payment frequency.

TASK

1. On the Application Entry area, select the change payment frequency item, and then click **Add**.

STEP RESULT: The selected task is reassigned to the target user successfully.

Reassign by Task Auto Assign Strategy

To watch list is used to reassign tasks from one user to other users. To reassign a task to another user, do as follows:

PREREQUISITE

N/A

TASK

1. From the main menu, select **Customer Service > Watch List**.
2. Search out the applicable by **Quick Search** or **Advanced Search**.
3. Select the target task to **Reassign**.

note

The finished tasks will not be displayed in the watch list.
In the Reassign Strategy field, select **Reassign Strategy** as **Task Auto Reassign Strategy**.

4. Click **Reassign**.

STEP RESULT: The selected task is reassigned to the CS user who have the least task on the hand for the time being.

Query

This topic describes how to query a proposal/policy.

PREREQUISITE

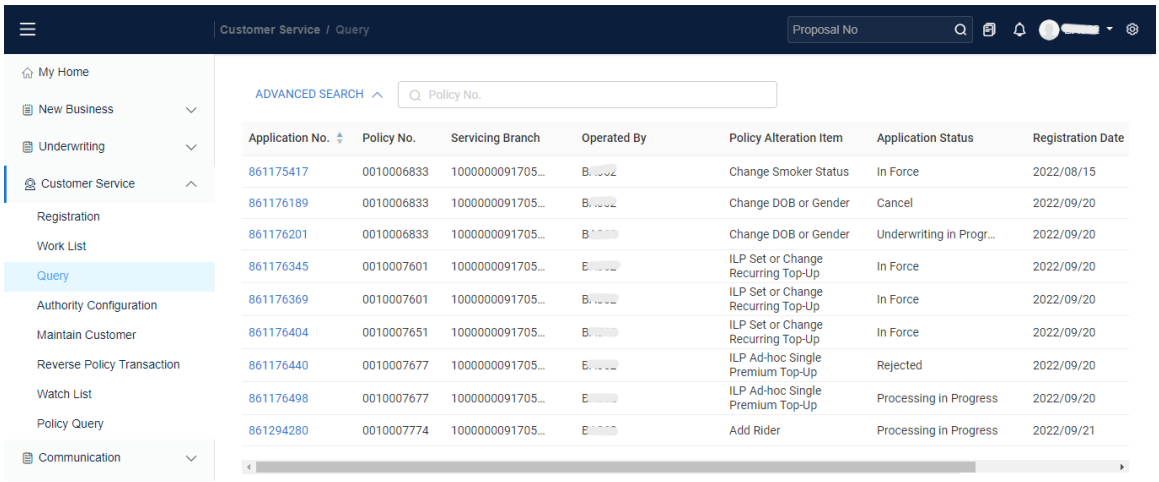

- The policy is created in Customer Service Workbench.

TASK

1. From the main menu, select **Customer Service > Query**.

Step Result: The Query Search page is displayed.

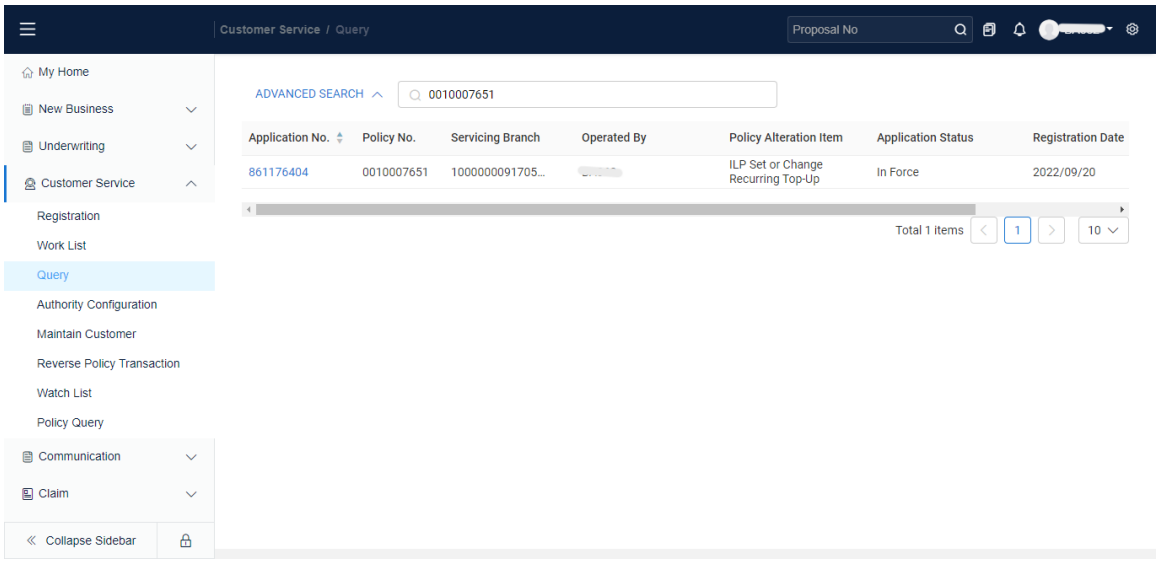

Figure 94. Search page of Query

2. Set criteria and click **Search**.

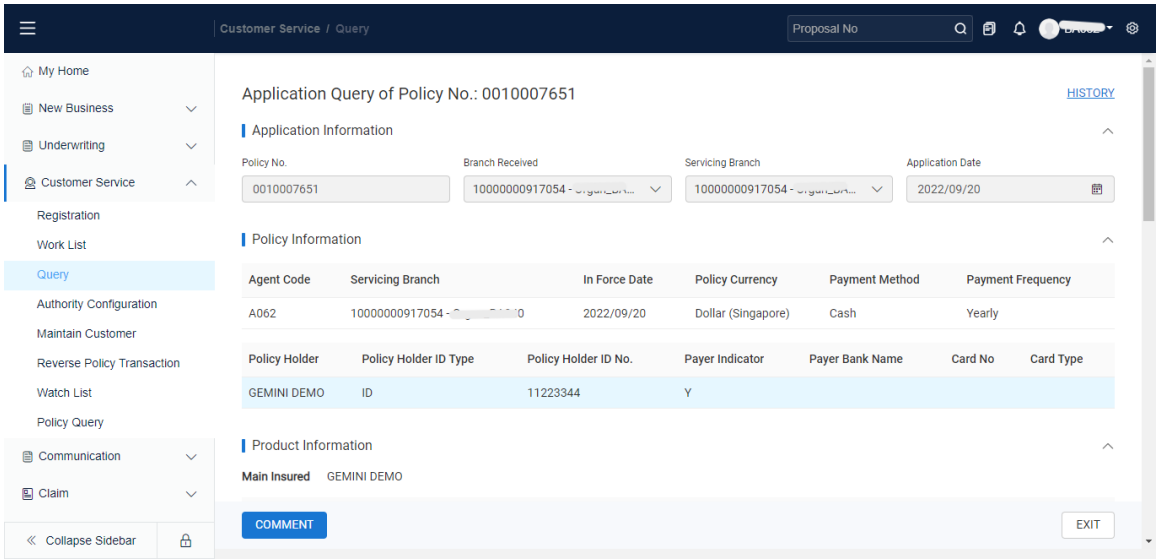

Step Result: The matching result is displayed in the **Search Result** table.

Figure 95. Search result page of Query

3. Click the hyperlink and you will go to the query page of the proposal. *Step Result:* The query page is displayed.

Figure 96. Query Detail page

Reject a Customer Service Application

During application entry or disposing underwriting decision or Pending Approval or Approving or approved, the application can be rejected because of signature difference, incomplete form, or other reasons.

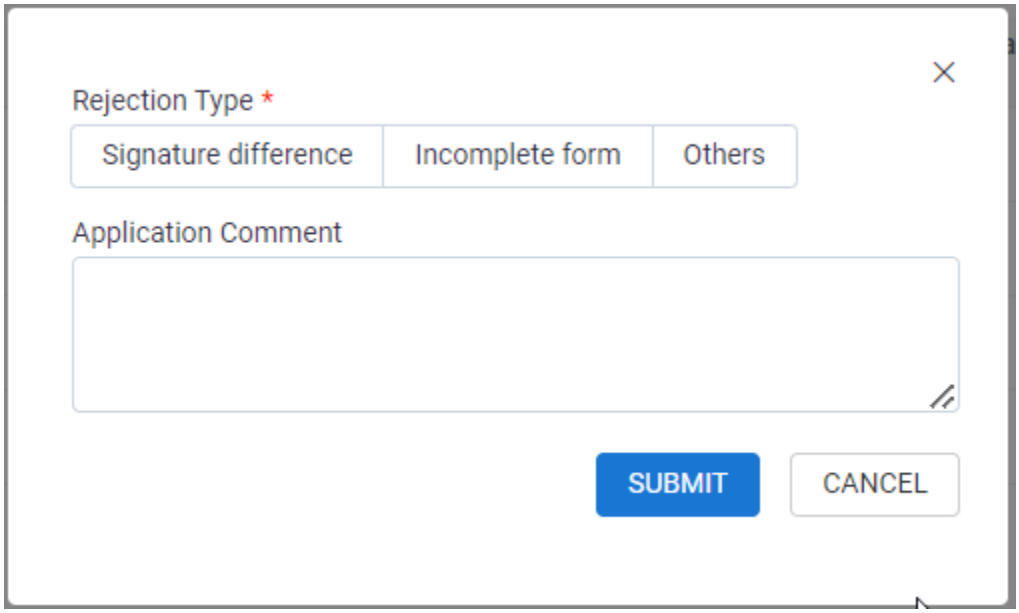

PREREQUISITE

N/A

TASK

1. On the Customer Service Entry page or on the Underwriting Confirmation page or Application Approval Page, click **Reject Application**. The Application Rejection pop up is displayed.

Figure 97 Reject application

2. On the Application Rejection pop up, select a rejection type and enter the rejection comment, and then click **Submit**.

Cancel a Customer Service Application

Online Application Cancellation

After an application is registered, it can be cancelled if required as long as the application has not taken effect. This section describes using LS to cancel an application online.

PREREQUISITE

The application has been registered.

TASK

1. Search out the application to be cancelled.

a. From the main menu, select **Customer Service > Work List**.

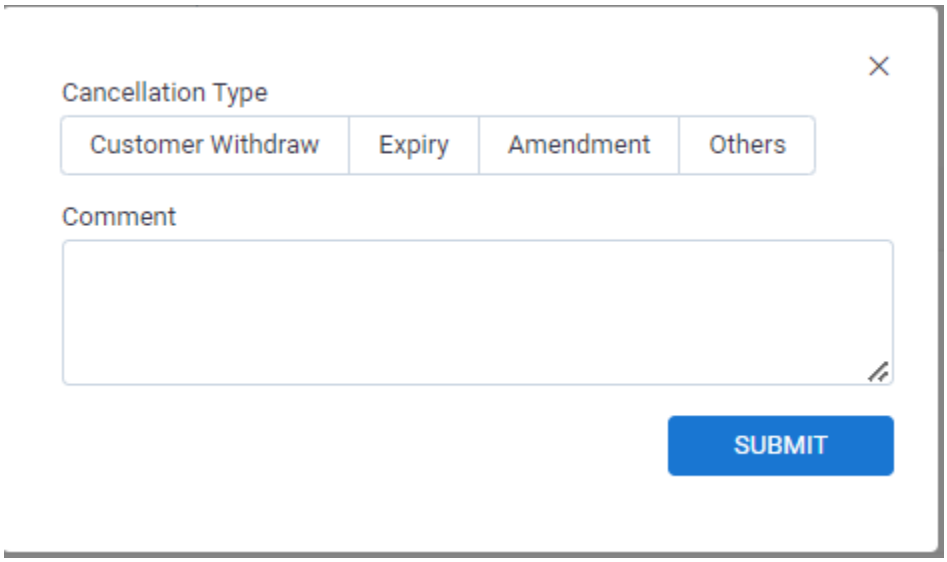

b. On Work List, set search criteria and click **Search**.

NOTE: If you search by policy number, skip Step b.

1. c. In the **Search Result** section, select an application record, and then click **Cancel**.

STEP RESULT: The Application Cancellation pop up is displayed.

Figure 98 Application - Cancellation Pop Up

2. On the Application Cancellation pop up, select a Cancellation Type, enter comment and click **Submit**.

Perform Customer Services without CS Flow

Reverse Alteration

After alteration takes effect, for some reasons, such as client request, human error made in the transaction, the transaction can be reversed. This section describes using LS to reverse an alteration.

PREREQUISITE

- The application status is *Inforce*.
- The policy is not frozen.
- The following alternations can NOT be reversed:
    - Claim Acceptance
    - Change Policy Holder
    - Change Beneficiary

- Change Assignment
- Change Payment Method
- Reversal

TASK

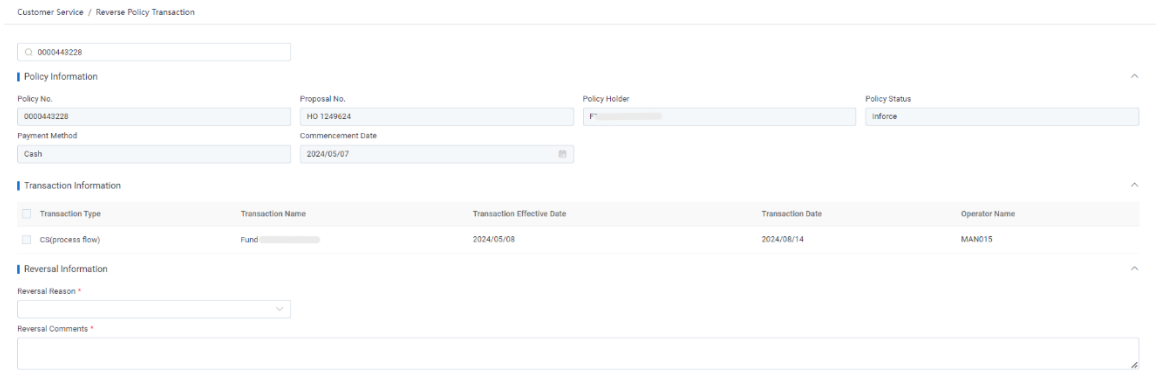

1. Search out the transaction to be reversed.

a. From the main menu, select **Customer Service > Reversal**.

b. On the Reversal page, enter the policy number and then click **Search**. The qualified transaction records are displayed.

NOTE: Only the policies whose organizations that you have access to can be searched out.

Figure 99 Reverse Alteration

2. Undo the transaction.

a. Select the alteration to reverse, select a reversal reason and enter the reversal comment. Then click **Submit**.

b. System undo the policy data back to before reversed transaction happened and back the collection used for receivable of reversed transaction to suspense.

note

If the transaction has confirmed payment, system will pop up an error message to inform users to cancel payment first.

Policy Servicing Quotation

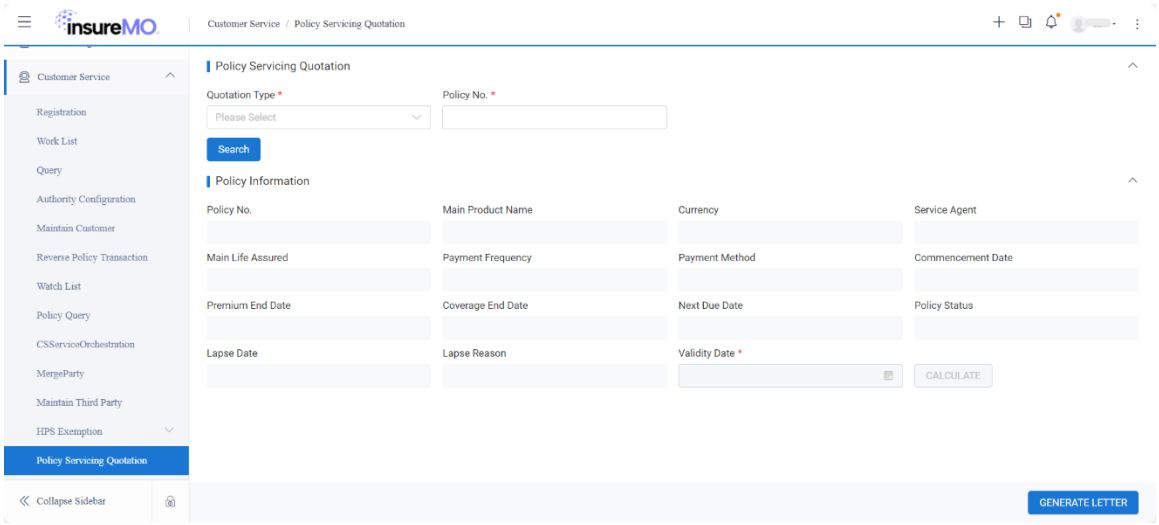

This topic describes how to do policy servicing quotation.

TASK

1. From the main menu, select **Customer Service > Policy Servicing Quotation**.

STEP RESULT: The Policy Servicing Quotation page is displayed.

Figure 110 Policy servicing quotation

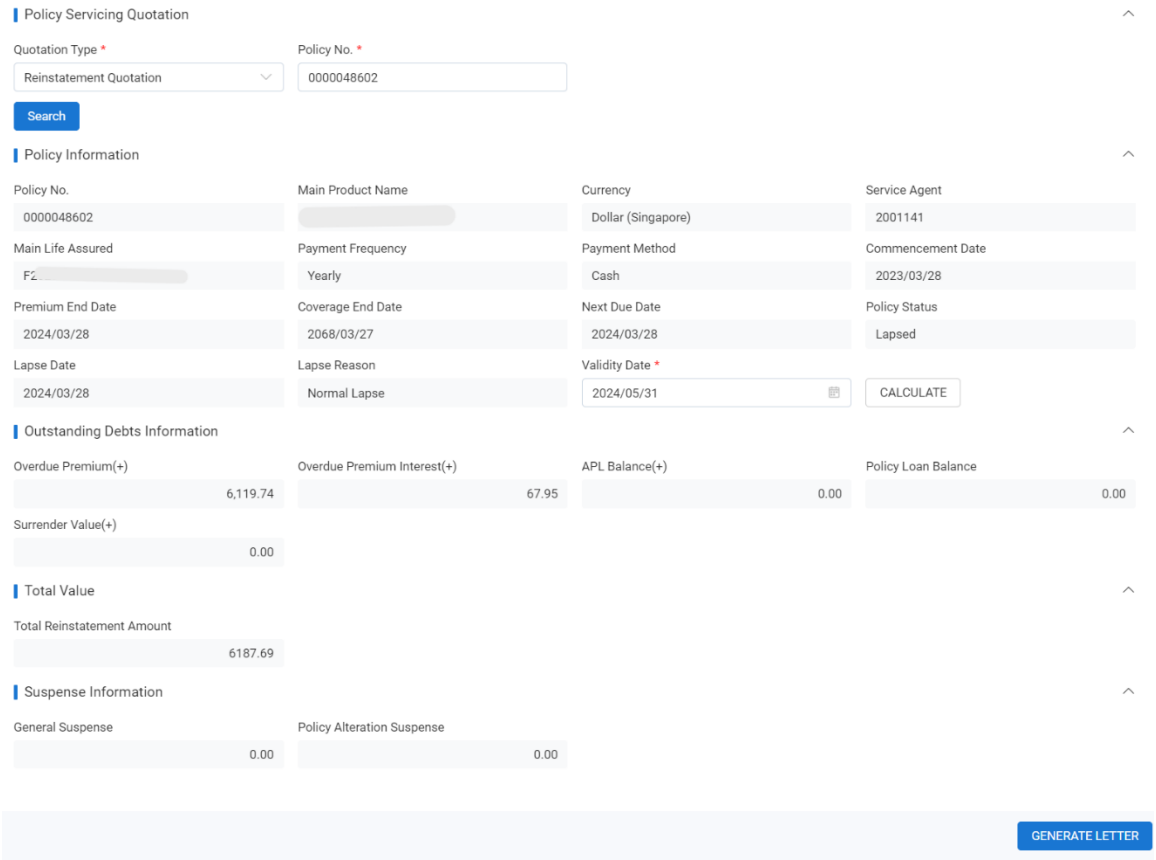

2. Select the **Quotation Type** and enter the **Policy No.** to search policy basic information, both Quotation Type and Policy No. are mandatory key.

STEP RESULT: System displays the policy data in **Policy Information Section**.

3. Enters the **Validate Date**, system enables the **Calculate** button.

STEP RESULT:
System enables the reaming sections and uses the Validity Date entered by user to calculate the following items for reinstatement and display the value on each section.

Figure 111 Quotation result

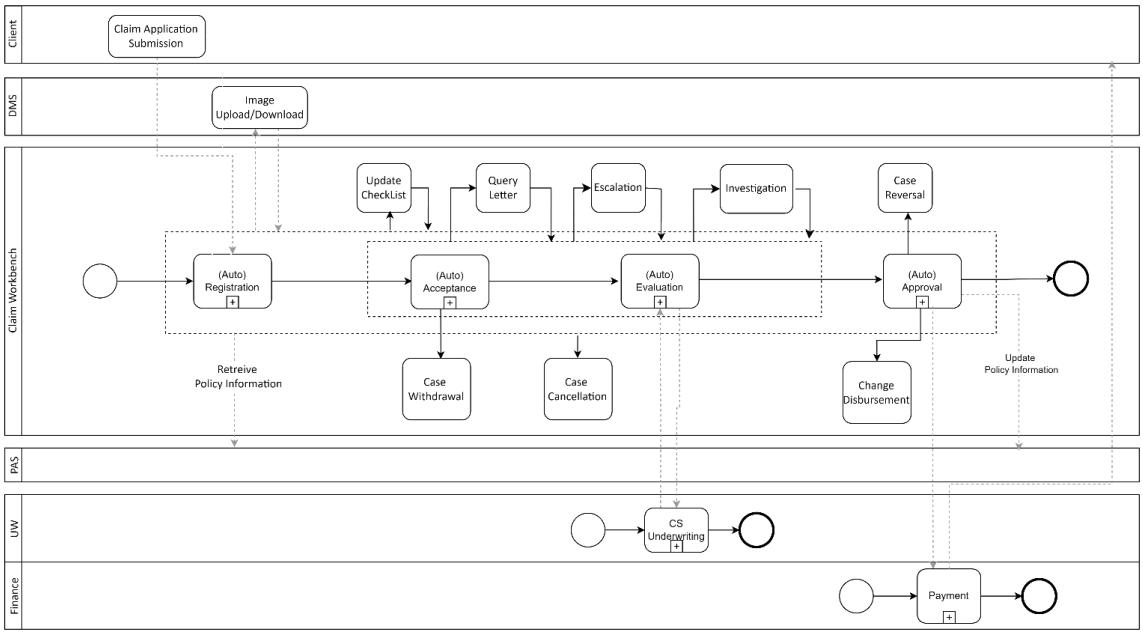

Gemini Claims User Guide

Summarize page

Claims Overview

Claims workbench manages the whole process from claims registration to claims settlement.

Figure 1. Workflow of Claims

The table below lists general process flow of claim.

Table 1. Description of Claim Workflow

Step	Description
Case Registration	When a customer reports a claim event, the insurance company will register the basic information about the claim case in the Life System. A valid existing Life Assured must be chosen for case registration to proceed. Claims application could be submitted from front end and system auto registers the case. For details, see Register a Case.
Case Acceptance	If claim case meets auto acceptance rules, system accepts the case automatically. For details, see Auto Acceptance. If claim case does not meet auto acceptance rules, the insurance company needs to check the case information and decide whether to accept it or not. For details, see Manual Acceptance.
Case Evaluation	If claim case meets auto evaluation rules, system evaluates the case automatically. If the case does not meet auto evaluation, after a claim case is accepted, the insurance company will evaluate the case for claim indemnification. For details, see Workflow of Case Evaluation.

Step	Description
Case Approval	If claim case meets auto approval rules, system approves the case automatically. For details, see Auto Approval. If claim case does not meet auto approval rules, the claim approval officer needs to check the case information and decide whether to approve the case or not. For details, see Manual Approval.

Perform Claims

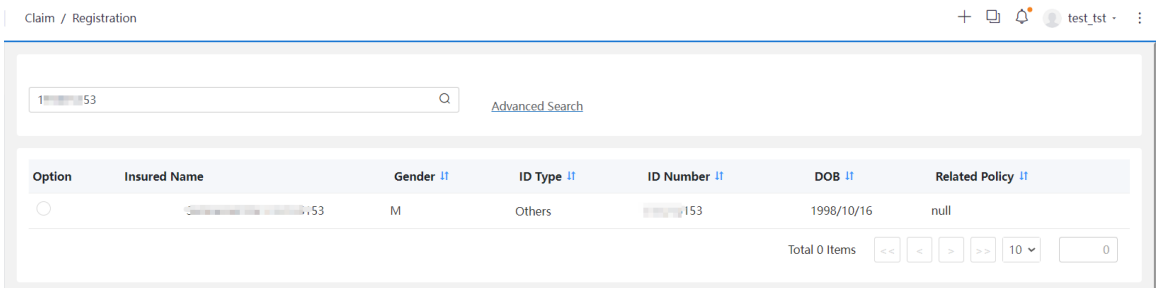

Register a Case

When a customer reports a claim event, the insurance company will register the basic information about the claim case in the claim workbench. A valid existing Life Assured must be selected for case registration to proceed. This section allows you to register a claim case. Meanwhile, you can also suspend a case at registration stage. This section describes the process of registering a case manually. The system also supports to submit claim application electronically from front end systems like customer portal etc.

PREREQUISITE
Customer reports a claim event.

1. From the main menu, select **Claims > Registration**
   Step Result: The Customer Search of Claim Registration page appears.
2. On Customer Search of Claim Registration page, enter insured name, ID no. or policy no. to quick search or input more details by **Advance Search**.
3. In the Search Result area, select the target record and then click **Submit**.

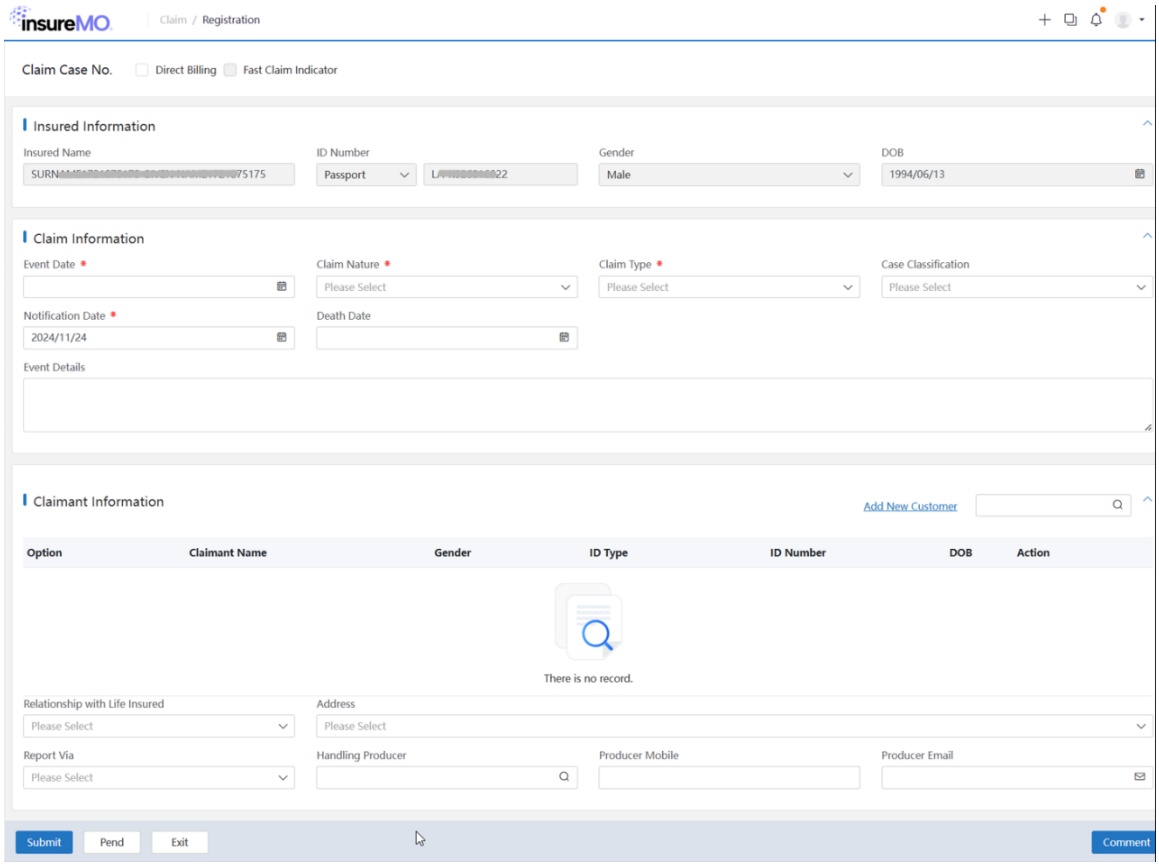

Figure 2. Customer Search of Claims Registration Page

Step Result: The Case Registration page appears.

4. On the Case Registration page, follow these steps to enter information.

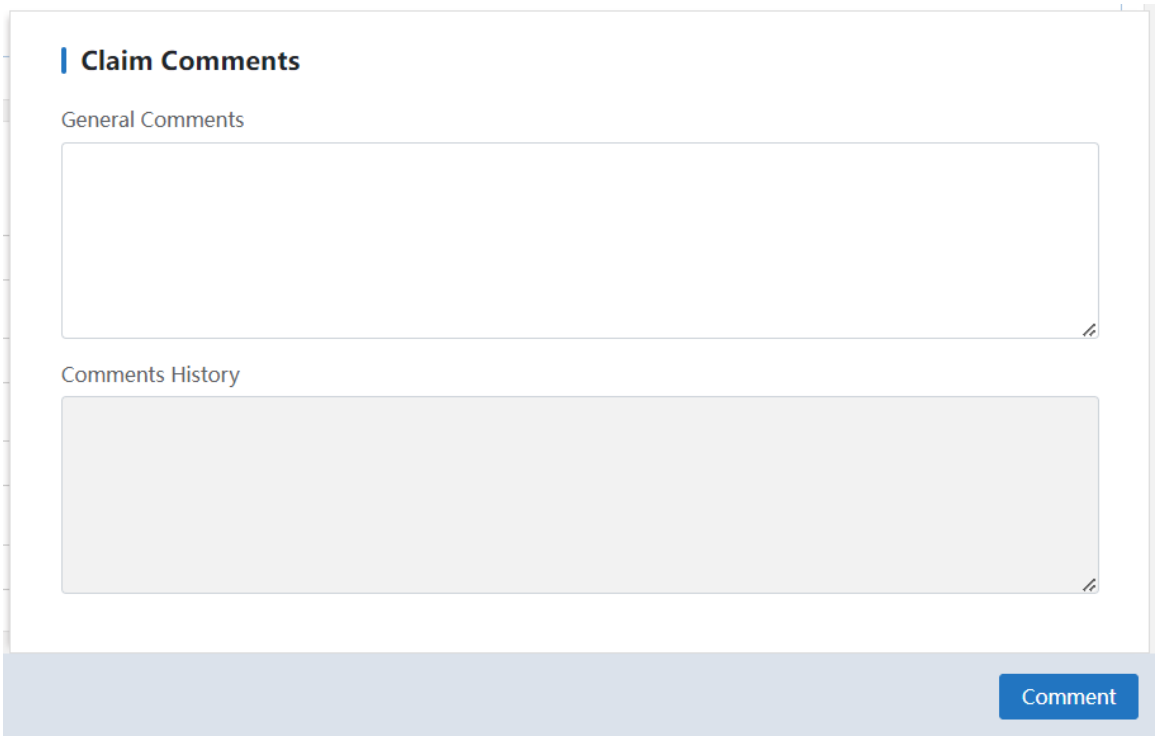

Figure 3. Claims Registration Page

a. In the **Claim Information** section, enter all mandatory information and other optional information as needed.

b. In the **Claimant Information** section, the user can create new customer or search an existing customer as claimant, enter other information as needed.

c. Click **Comment** to enter general comments in the General Comments box if necessary.

5. Act according to your decision.
    - To submit this case, click **Submit**. After submission, the system will auto generate claim case number.
    - To pend this case, click **Pend**. Then the system updates the case status to Pending.

note

When the case status is Pending, you can further cancel or accept this case. For more information, see Cancel a Case, Manual Acceptance or Auto Acceptance.

6. After the case is registered, you can:
    - To redo registration, click **Register Another Case**.
    - To return to claim worklist, click **Exit**.
7. Click **Next** to go to Case Acceptance stage.

Accept a Case

Auto Acceptance

After a claim case is registered, it will be accepted automatically under certain conditions. This section tells under which circumstances and how the system accepts case automatically.

PREREQUISITE

The claim case meets auto acceptance rules pre-configured in the system.

- Claim Nature is selected.
- Event Date is entered.
- Submit Channel is Manual Registration.
- Case Type is Medical.
- Case Classification is New Claim.
- Policy status is in-force on event day.
- Policy is not suspended by CS or blocked by other claims.
- No similar case validation check exists.
- Product status is in-force on event day.
- Liability of this product is within the liability covered by this claim type.

Otherwise, the case has to be manually accepted, see Manual Acceptance.

note

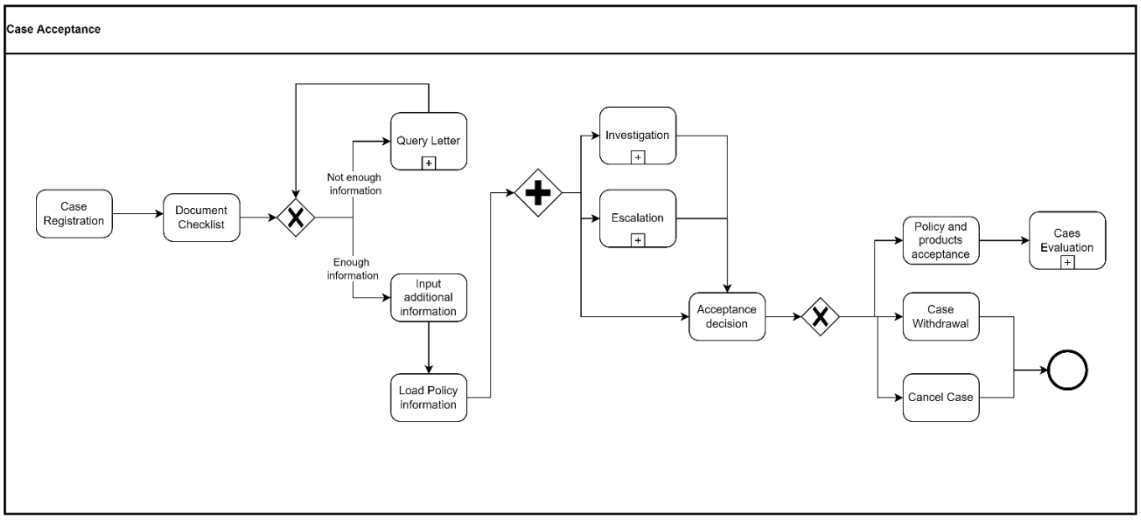

The auto acceptance rule is configurable.

1. Upon submitting a claim registration, the system checks whether the auto acceptance is valid.
    - If yes, go to Case Evaluation. For instruction about how to evaluate a case, see Workflow of Case Evaluation.
    - If not, go to accept the case manually. For more information, see Manual Acceptance.
2. The system updates claim policy and product information.
3. The system books claim reserve for this case.
4. The system updates acceptance decision to Accept.

Manual Acceptance

After a claim is registered, the insurance company checks the case information and decides whether to accept it or not. This section describes the process of manually accepting a case. The following diagram shows the workflow of accepting a case.

Figure 4. Workflow of Case Acceptance

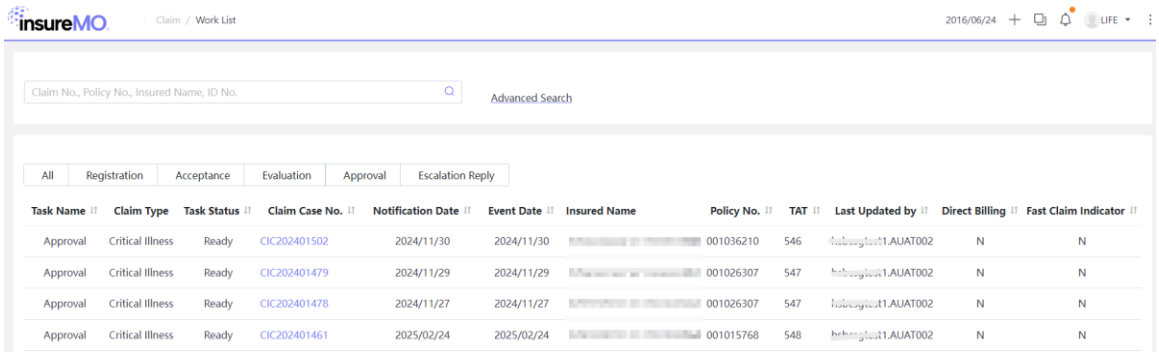

PREREQUISITE

Case status should be Waiting for Acceptance, Acceptance in Progress, or Pend at Acceptance.

1. Retrieve a claim case.
   a. From the main menu, click **Claims > Work List**.
   Step Result: The Claims Work List page appears.
   b. On the Claims Work List page, enter search criteria to quick search or input more details by **Advance Search**.
   c. In the **Claim Case No.** column, click a case number.

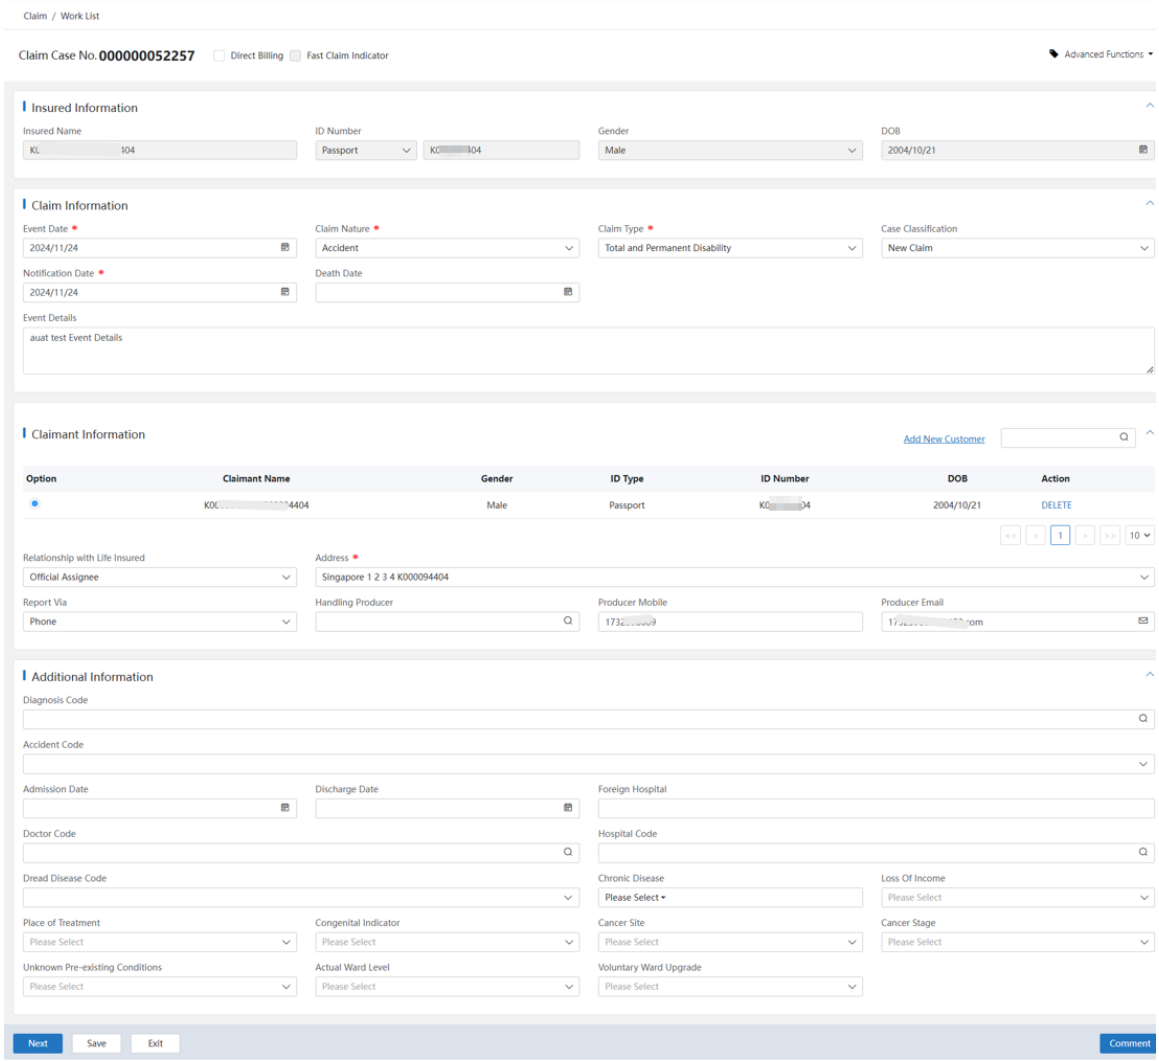

Figure 5. Claims Work List Page

Step Result: The Case Acceptance Entry page appears.

2. On the Case Acceptance Entry page, you need:
   a. In the **Claim Info** section, update information if necessary. For Medical Claim, enter the hospital code and select hospital code from the **Hospital Code** drop-down list.

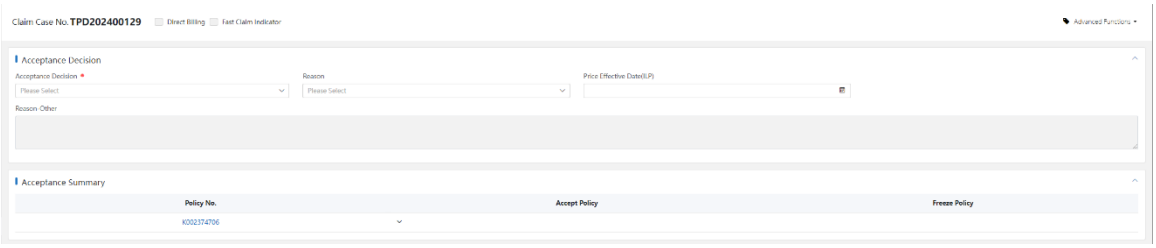

Figure 6. Claims Acceptance Entry Page

b. If needs to enter diagnosis code, you can click **Diagnosis Code** and select diagnosis code or diagnosis description by fuzzy search.
c. In the **Claimant Info** section, update claimant information if necessary.

3. Click **Next**.
   Step Result: The Acceptance Decision page appears and policies of the life assured display.

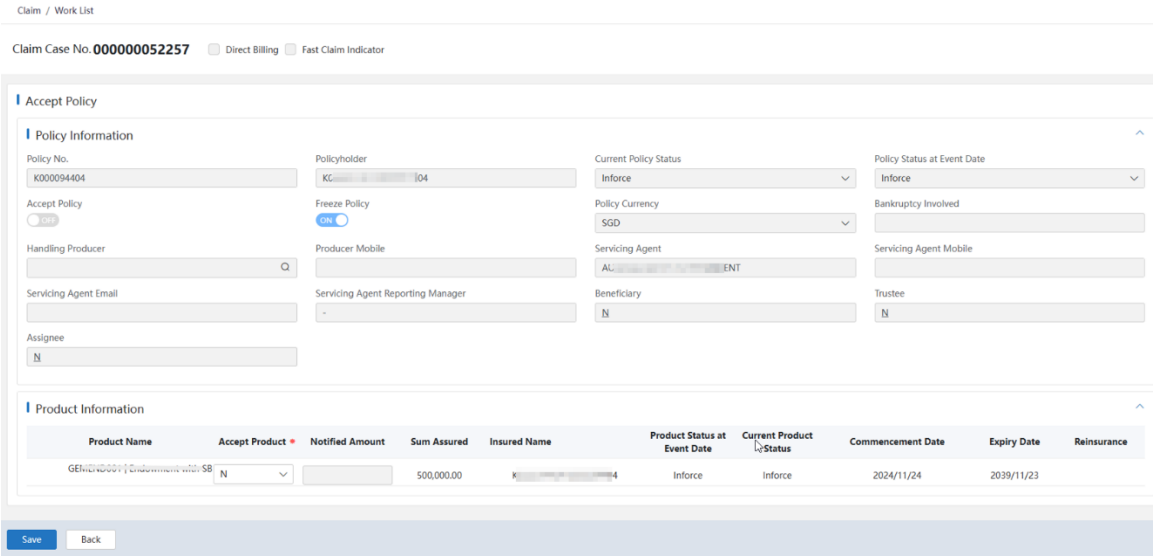

Figure 7. Claims Acceptance Decision Page

4. Click policy hyper-link
   Step Result: The Acceptance Policy page appears.

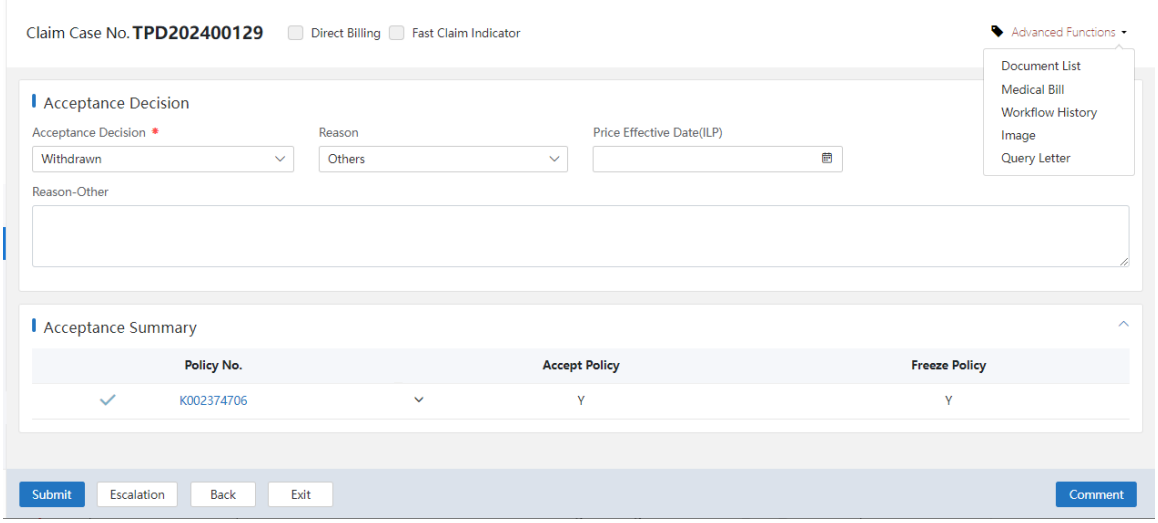

5. On the Acceptance Policy page, change **Accept Product** indicator to Y for accepted products, and then click **Save**.

Figure 8. Claims Acceptance Policy Page

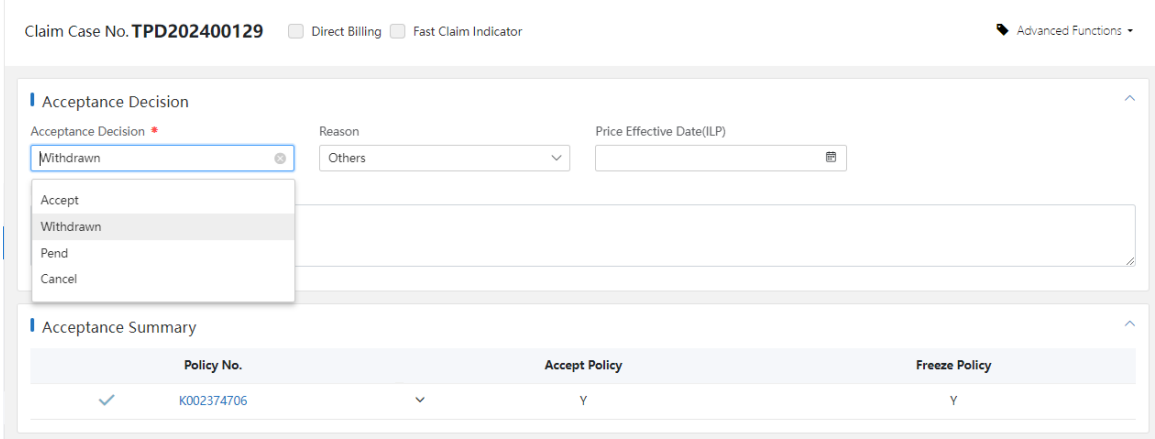

6. Click **Back** to Acceptance Decision page appears.

7. On the Acceptance Decision page, take action according to your decision.

- If this case needs escalation, click **Escalation**. For detailed information, see Escalation.
- If this case needs to update documents, click **Document List**. For detailed information, see Document List.
- If more documents, signature and compliance form need to be provided, you need to send a query letter to the claimant to confirm. Click **Query Letters**. For detailed information, see Query Letter.
- If this case is a medical case, to view the medical bill information and create a new medical bill, click **Medical Bill**. For detailed information, see Medical Bill.

8. On the Case Acceptance Decision page, select from the **Acceptance Decision** drop-down list, take action according to your decision.
    - To accept this case, select **Accept** and then go to the next step.
    - To cancel this case, select **Cancel** and **Cancel Reason** and then click **Submit** to cancel this case. Then the case status is changed to *Cancelled*.
    - To suspend this case, select **Pend** and then click **Submit** to suspend this case. Then the system updates the case status to *Pend at Acceptance*.
    - To withdraw this case, select **Withdrawn** and select a withdraw reason. Then click **Submit** and the case status is changed to *Withdrawn at Acceptance*.

9. Click **Submit**. Then the system will check the case acceptance.

    - If the case acceptance is valid, the system saves case information and updates the case status to Waiting for Evaluation. Then go to the Evaluate a Case stage.
    - If the case acceptance is not valid, return to step1.

Evaluate a Case

Workflow of Case Evaluation

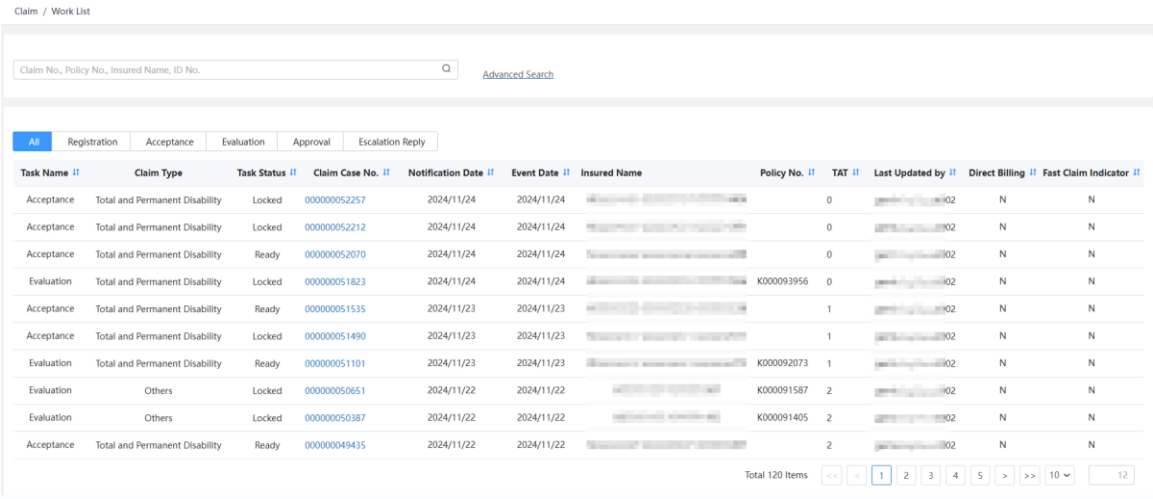

The following flowchart shows the process of evaluating a case.

Figure 9. Workflow of Case Evaluation

Check Claim Information

1. Retrieve an evaluation case.
   a. From the main menu, select **Claims > Work List**.
   b. On the Claims Work List page, enter search criteria to quick search or input more details by **Advance Search**.
   c. In the **Case No.** column, click a case number.

2. On the Case Summary of Evaluation page, take action according to your decision.

    - To update case information, click **Edit Info**.
    - For Medical claim case, to view and update the medical bill information, click **Medical Bill**. For more information, see Medical Bill Entry.
    - To view the document information, click **Document List**. For detailed information, see Document List.
    - To query letter information or send a query letter to ask claimant to provide more information, click **Query Letters**. For detailed information, see Query Letter.
    - To send this claim case for underwriting, click **Underwriting**. For detailed information, see Underwriting.
    - If this case needs escalation, click **Escalation**. For instruction about how to escalate a case, see Escalation.

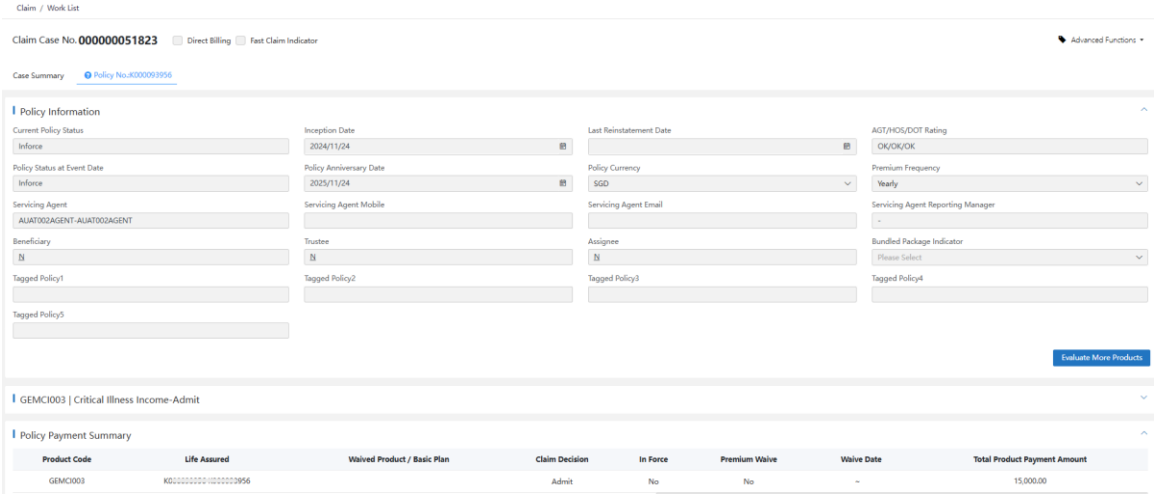

Evaluate and Make Decision

Evaluate TPD or Death Claims

1. On the Case Evaluation-Policy page, there is policy information, accepted products and policy payment summary. Th user can click **Evaluate More Products** to accept more products to do the assessment. e.g To terminate main product when evaluating accelerated rider.

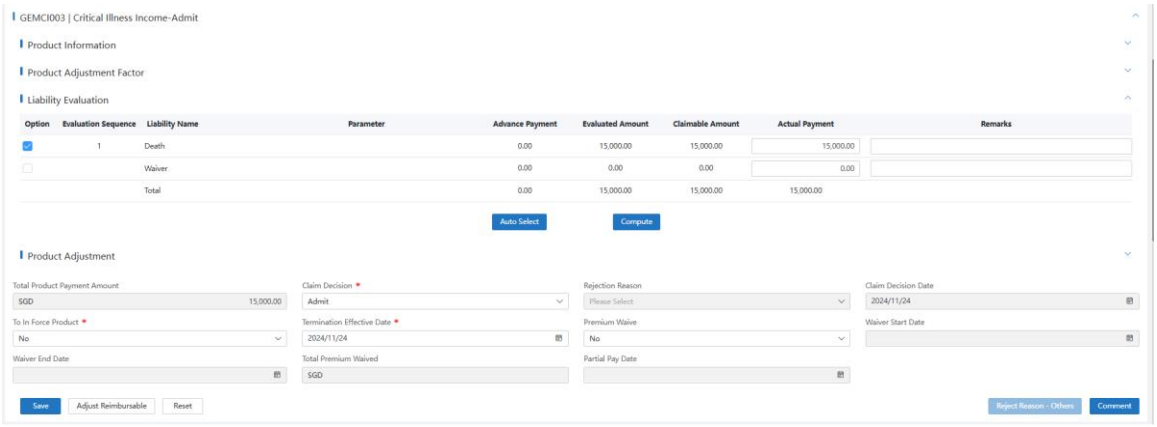

2. Click the accepted product.

Figure 10. Claims Policy Evaluation page

3. Under the **Liability Evaluation** area of the accepted product, in the Options column of the Liability Evaluation area, select the check box to select liability.

Figure 11. Claims Policy Evaluation page — Product Evaluation

note

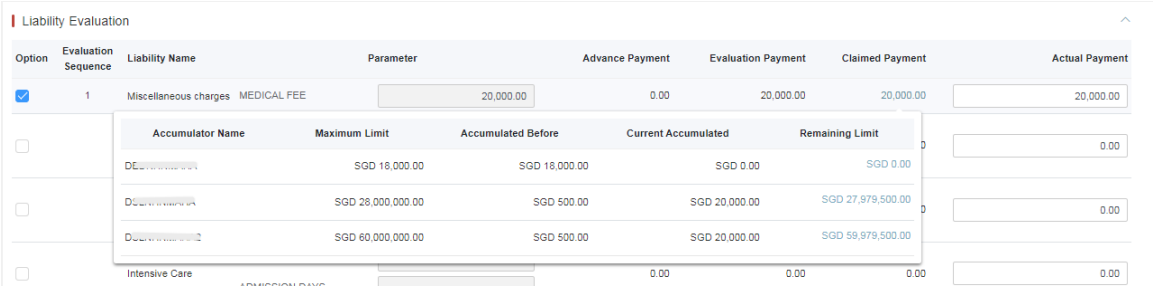

The liabilities will be sorted based on the sequence configuration. This sequence will be regardless of product code.

4. Click **Compute** to calculate **Evaluation Payment** amount and the Claimed Payment amount.

    - **Evaluation Payment** is the amount calculated by configured claim formula.
    - **Claimed Payment** is the amount after the configured claim accutors.

- Users can adjust Actual Payment amount if needed.

5. (Optional) Click hyperlink of Claimed amount to view the detailed accumulator information for this liability.

6. (Optional) On Accumulator information page, click hyperlink of Remaining Limit to view the accumulator history.

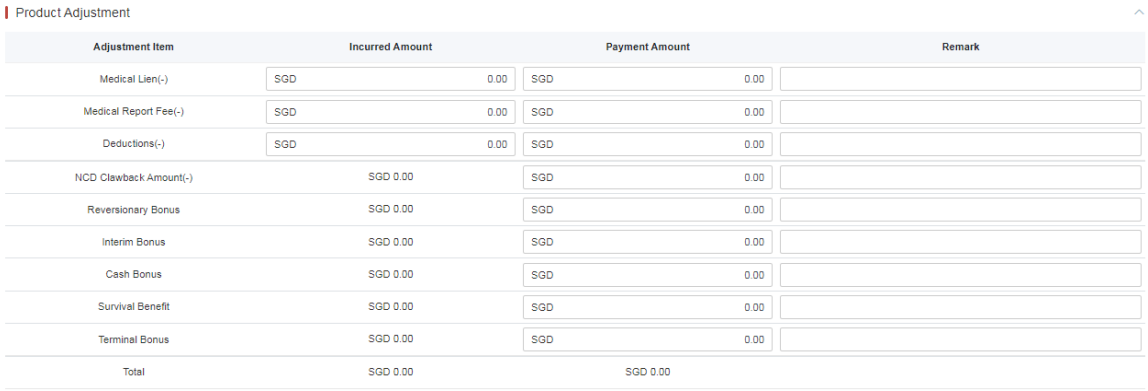

7. If needs to adjust the product payment amount, In the **Product Adjustment** section, update the payment amount in the **Payment Amount** box and type remarks in the **Remarks** box.

    - For the adjustment items on the product level, such as Survival Bonus (SB), Cash Bonus (CB), Terminal Bonus (TB), Reversionary Bonus (RB), and Interim Bonus (IB), the system will allow users to manually input the amount after adjustment.
    - Survival benefit with due date after claim event date is deemed to be paid after the event date. The payment amount for “Survival Benefit Clawback” in product adjustment section will be defaulted to sum the total SB with due date paid after the event date.
    - If the system detects that survival benefit allocated after claim event date was used to repay outstanding policy loan and APL, the system will display warning message.

note

Bonus, like RB, TB, SB and CB, are calculated at the product level.

8. Select from the **Claim Decision** drop-down list, take action according to your decision.

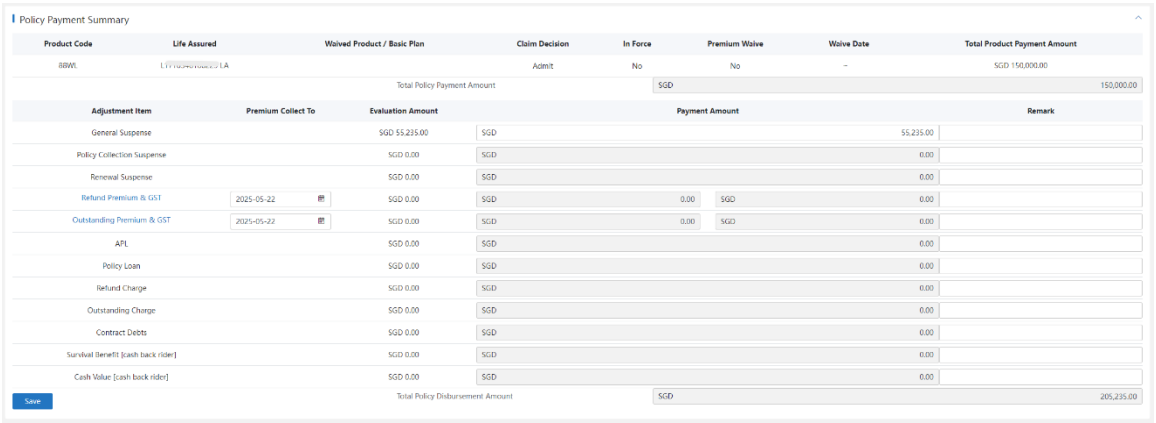

- To admit the product evaluation, select **Admit**.
- To permit the product evaluation by ex-gratia-full, select **Ex-gratia-Full**.
- To permit the product evaluation by ex-gratia-partial, select **Ex-gratia-Partial**, adjust the payment amount.
- To repudiate the product, select **Repudiate**. The system updates total product payment amount to zero.
- To cancel this product, select **Cancel**.
- To withdraw the product, select **Withdrawn** and then select a reason.
- To void policy or product, select **Denied & Rescind with refund**.

9. Click **Save**. Policy Payment Summary is updated.
    - Under **Policy Payment Summary**, update **Premium Collect To** date and tab, then the system automatically re-computes the refund premium and outstanding premium.
    - The “Premium Collection To” for outstanding premium is default as the next anniversary date after claim event date or next due date after event date based on claim type or whether it’s a termination case or not. As per current configuration, for Death, TPD, CI, the system automatically collects OS premium to the next anniversary after event

date, no matter it's a termination case or not. For other claim types, there will be no outstanding premium deducted from claim payable amount.

- Allow users to manually adjust the payment amount for all adjustment items on policy level when there's evaluation amount calculated by the system. If the user adjusts the payment amount, the system will generate separate records of difference with new fee types.

10. Go to Benefit Amount Allocation under Case Summary to make Disbursement Plan. For more information, see Make Disbursement Plan.

11. Click **Submit**.
    Step Result: The system goes to Claim Approval.

Evaluate Medical Claims

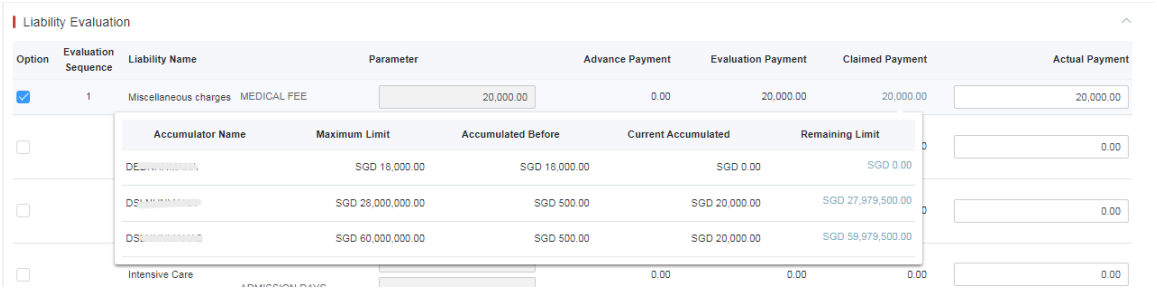

1. On the Case Evaluation-Policy page, there is policy information, accepted products and policy payment summary. Click the accepted product.

2. Under the **Liability Evaluation** area of the accepted product, in the Options column of the Liability Evaluation area, select the check box to select liability.

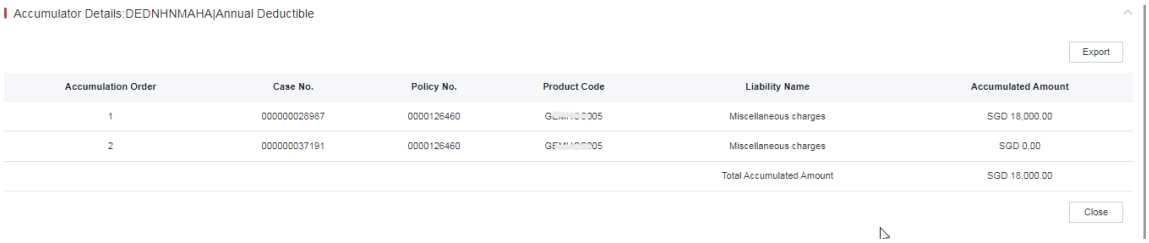

note

a. *The system displays the evaluation sequence according to your select sequence.*
b. *For medical claim, if there are many liabilities under the products, the user can click **Auto Select**, then the system will auto select the liabilities based on input medical bills.*

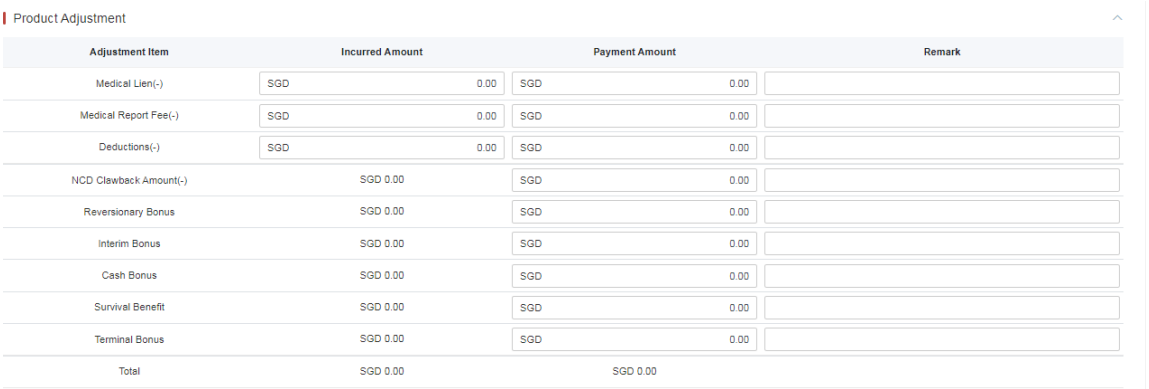

3. Click **Compute** to calculate **Evaluation Payment** amount and the Claimed Payment amount.
    - **Evaluation Payment** is the amount calculated by configured claim formula.
    - **Claimed Payment** is the amount after the configured claim accutors.
    - Users can adjust Actual Payment amount if needed.
4. (Optional) Click hyperlink of Claimed Amount to view the detailed accumulator information for this liability.

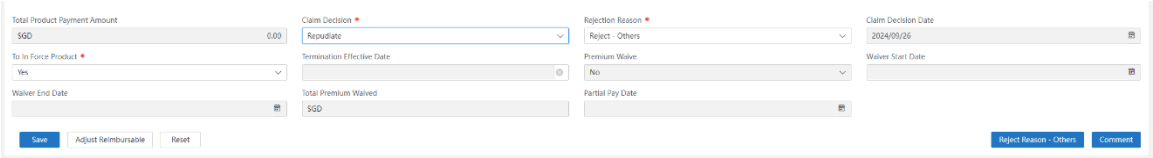

5. (Optional) On Accumulator information page, click hyperlink of Remaining Limit to view the accumulator history.

6. If needs to adjust the payment amount, In the **Product Adjustment** section, update the payment amount in the **Payment Amount** box and type remarks in the **Remarks** box.

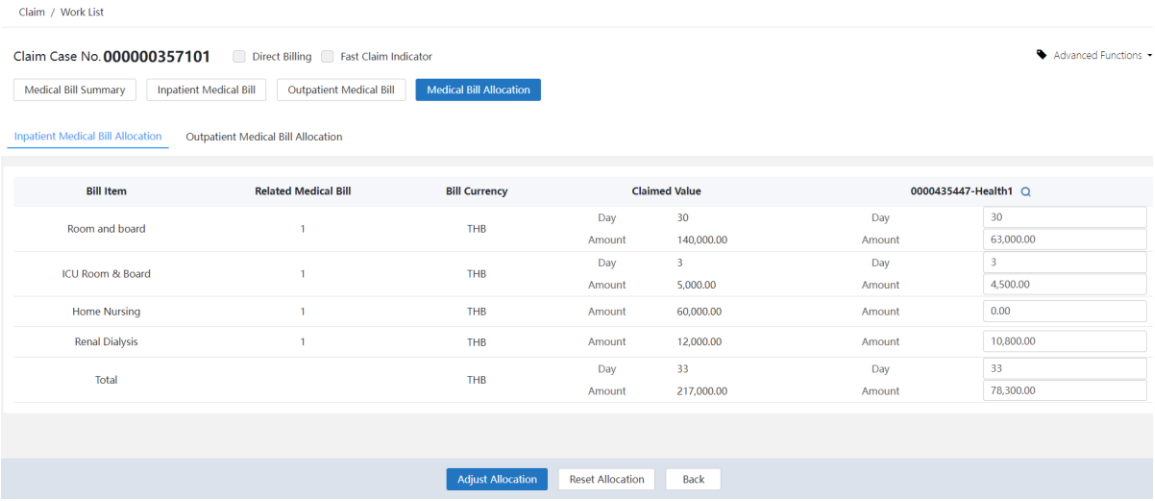

7. Select from the **Claim Decision** drop-down list, take action according to your decision.

- To admit the product evaluation, select **Admit**.
- To permit the product evaluation by ex-gratia-full, select **Ex-gratia-Full**.
- To permit the product evaluation by ex-gratia-partial, select **Ex-gratia-Partial**, adjust the payment amount.
- To repudiate the product, select **Repudiate**.
- To cancel this product, select **Cancel**.
- To withdraw the product, select **Withdrawn**.
- To void policy or product, select **Denied & Rescind with refund**.

8. Click **Save**. Policy Payment Summary is updated.
9. (Optional) Adjust reimbursable, do as follows:
    - Click **Adjust Reimbursable**.
    - On Medical Bill Allocation page, adjust claimed medical bill amount in the Inpatient and Outpatient section.

10. If the product is terminated in Step 7, update **Premium Collect to** date under policy payment summary.

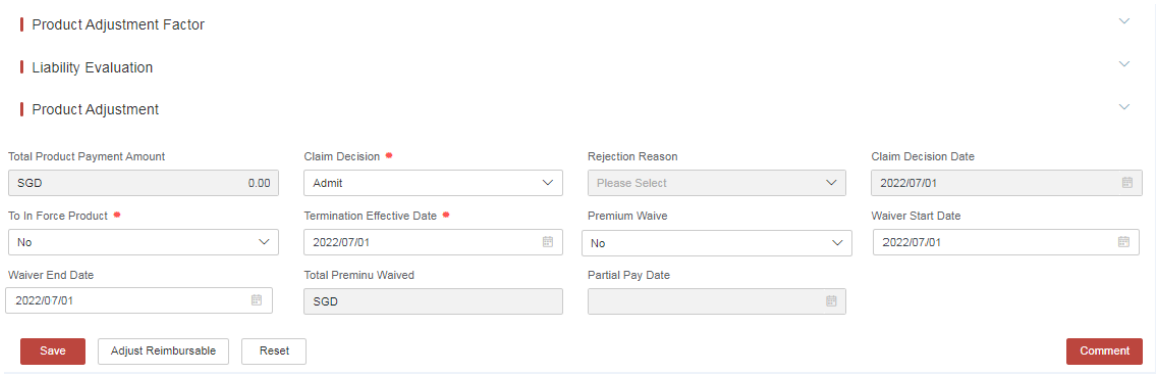

11. Repeat Step 1 to 10 to evaluate other accepted health products.
12. Go to Benefit Amount Allocation under Case Summary to make Disbursement Plan.
13. Click **Submit**.
    Step Result: The system goes to Claim Approval.

Evaluate Waive Claims

1. On the Case Evaluation-Policy page, there is policy information, accepted products and policy payment summary. Click the accepted product.
2. (Optional) Under the Liability Evaluation area of the accepted product, in the Options column of the Liability Evaluation area, select the check box to select liability.
3. (Optional) Click **Compute** to calculate **Evaluation Payment** amount and the **Claimed Payment** amount.
4. (Optional) Click hyperlink of Claimed amount to view the detailed accumulator information for this liability.
5. (Optional) On Accumulator information page, click hyperlink of Remaining Limit to view the accumulator history.
6. (Optional) If needs to adjust the payment amount, In the **Product Adjustment** section, update the payment amount in the **Payment Amount** box and type remarks in the **Remarks** box.
7. Select from the **Claim Decision** drop-down list, take action according to your decision.
    - To admit the product evaluation, select **Admit**. Go to Step 8
    - To permit the product evaluation by ex-gratia-full, select **Ex-gratia-Full**.
    - To permit the product evaluation by ex-gratia-partial, select **Ex-gratia-Partial**, adjust the payment amount.
    - To **Repudiate** the product, select Repudiate. The system updates total product payment amount to zero.

- To cancel this product, select **Cancel**.
- To withdraw the product, select **Withdrawn** and then select a reason.
- To void policy or product, select **Denied & Rescind with refund**. For Trad products, the system auto refunds total paid premium from commencement date or reinstatement date which is later. For ILP products, the system auto refunds TIV.

8. Take different options for the evaluated product:
    - If it is a waiver, set Premium Waive as Yes. If waiver is set to terminated,
        - For waived products, set waiver start date to be NDD after event date. Set waiver end date to be premium end date of waived product. The user is able to update waiver start date and waiver end date.
    - If it is a waiver, set Premium Waive as Yes. If the waiver is set to inforce,
        - For waived products, default waiver start date to be NDD after the event date. Default waiver end date to be premium end date of waived product. The user is able to update waiver start date and waiver end date.
        - For waiver, default waiver start date to be NDD after event date. Default waiver end date to be min(premium end date of waived product, premium end date of waiver).
        - If the user updates waiver start date and waiver end date, waiver start date of both waived products and waived will be updated. Waiver end date of waived products will be updated. Waiver end of waiver will be updated to min (updated waiver end date, premium end date of waiver).
    - If it is just a product with waiver liability, set Premium Waive as Yes. Then waiver start date and end date are defaulted based on the evaluated product and users can update. The premium waiver indictor, waiver start date and waiver end date are for the evaluated product itself. The evaluated product's premium is waived.

9. Click **Save**. Policy Payment Summary is updated. Waived products' premium waive indicator, waiver start date and waiver end date are updated.
10. Under **Policy Payment Summary**, update **Premium Collect to** date and then the system auto computes the refund premium and outstanding premium again.
11. (Optional) Go to Benefit Amount Allocation under Case Summary to make Disbursement Plan. For more information, see Make Disbursement Plan.
12. Click **Submit**.
    STEP RESULT: The system goes to Claim

Approval.

Make Disbursement Plan

This section describes the process of making disbursement plan.

PREREQUISITE
Evaluation is done and there is claim indemnity to be allocated to beneficiaries or other payees.

1. Under Benefit Amount Allocation on Case Summary page, benefit amount could be allocated by 2 options below:
    - To select Lump Sum as payment type, click **+ Lump Sum** (go to step 2).
    - To select Installment as payment type, click **+ Installment** (go to step 3).
2. On Disbursement Plan - Lump Sum page, follow steps below:

a) Select payee according to your decision.

• Enter full name or partial name to search an existing customer from the system.

• Select payee from the default payee list.

• Click **Add New Customer** to create a new customer as payee

b) Select a payment method from the Payment Method drop-down list, enter payment currency and other payment information.

• If select Direct Credit as Payment Method, enter the account number manually or search existing account number.

• If select CPFB as Payment method, related fields for CPFB disbursement method will dynamically appear upon selection of disbursement method and will not appear for other methods. Refer to Figure 16.

c) Input Disbursement Percentage or Amount to allocate benefit amount to the selected payee.

d) To pend this disbursement plan, select Yes from the Pending drop-down list, and then type the comments in the Remark if necessary.

e). Click **Save**.

Figure 12. Disbursement Plan - Lump Sum Page

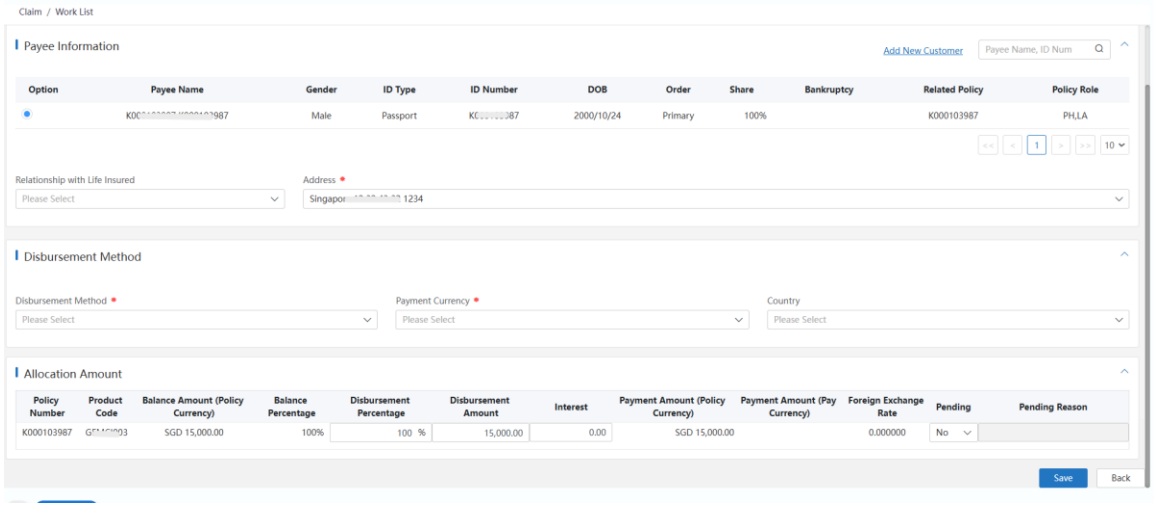

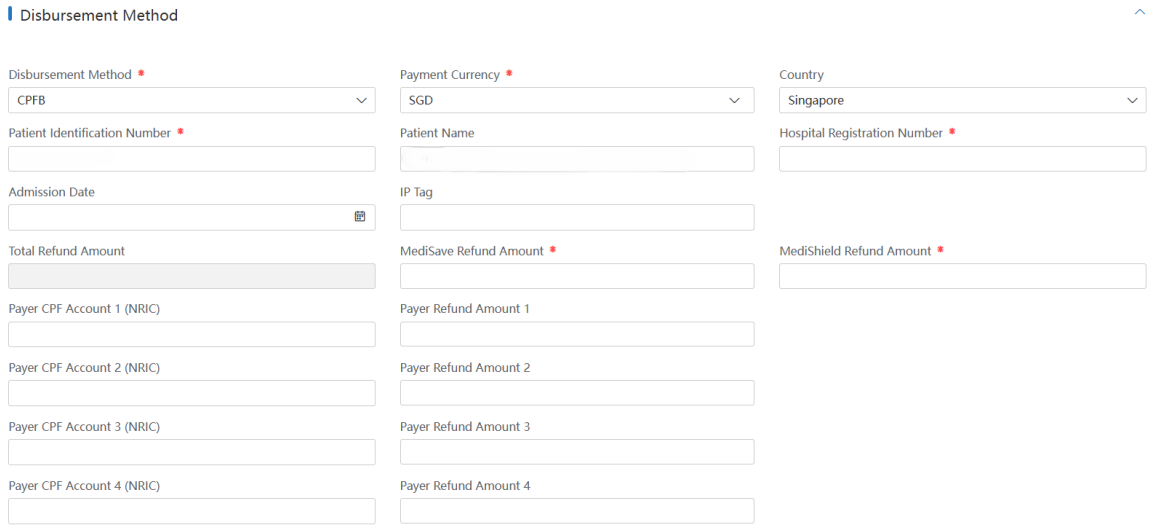

Figure 13. Disbursement Plan - Lump Sum Page - CPFB

3. On the Disbursement Plan - Installment page, follow these steps:

1. Select payee according to your decision.

- Enter full name or partial name to search an existing customer from the system.
- Select payee from the default payee list.
- Click **Add New Customer** to create a new customer as payee.

2. Select a payment method from the Payment Method drop - down list, payment currency and other payment information.

- If select Direct Credit as Payment Method, enter the account number manually or search existing account number.

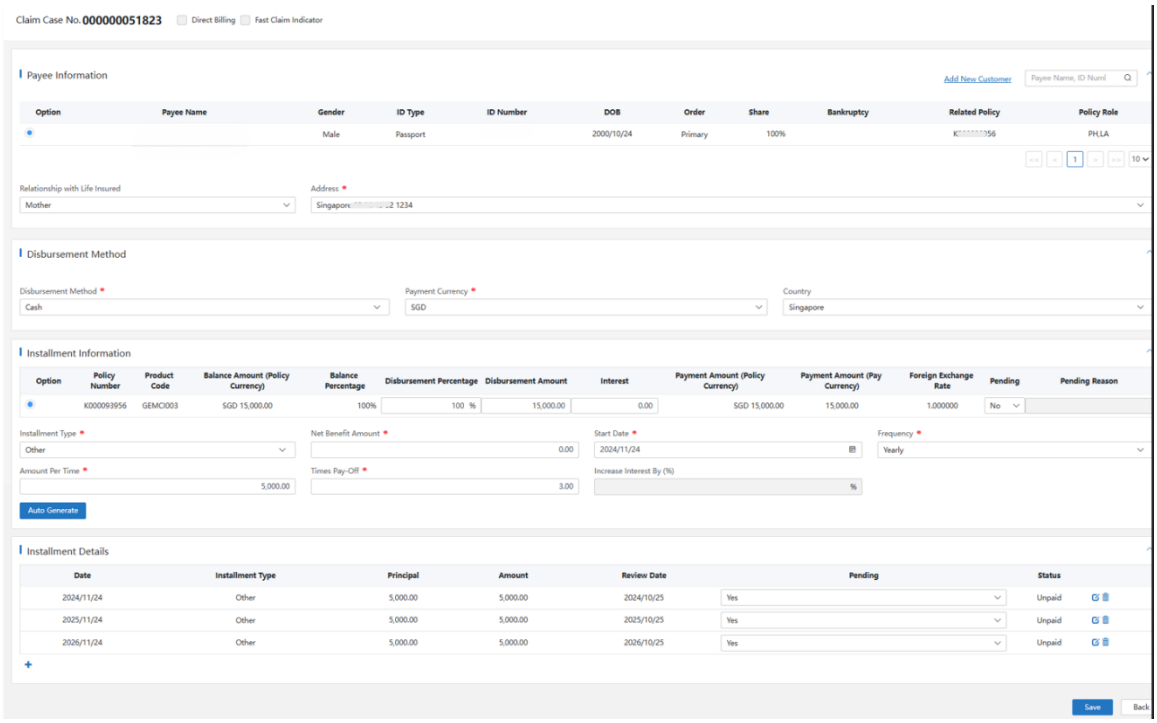

3. Input Disbursement Percentage or Amount to allocate benefit amount to the selected payee.

4. To pend this disbursement plan, select Yes from the Pending Payment drop - down list, and then type the comments in the Remark box if necessary.

5. Under Installment Information, enter all mandatory information for the Installment Information section and then click **Auto - Generate**.

Step Result: Then the system generates the installment plan based on the information entered in the Installment Information section and displays the installment plan in the Installment Details section.

Figure 14. Disbursement Plan - Installment Page

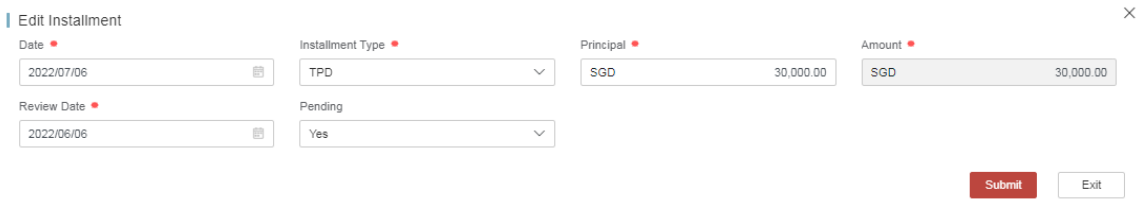

6. In the **Installment Details** section, for the installment needs to be paid in this claim, change the **Pending** indicator to N.

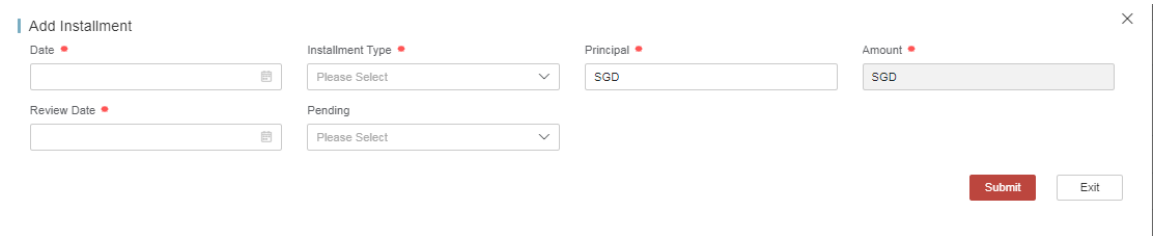

- Step Result: The unselected installment will be paid out after claim settled.

7. If you want to add, edit or delete an installment, you can click **Add**, **Edit** or **Delete** in the **Installment Detail** section.

    - To add an installment plan, click **Add**. On the Add Installment page, enter the installment information, and then click **Submit**.

    - To edit an installment plan, in the **Installment Detail section**, select an installment in the **Option** column and then click **Edit**. On the Add/Edit Installment page, edit the installment information and then click **Submit**.

- To delete an installment plan, in the **Installment Detail section**, select an installment in the **Option** column and then click **Delete**. On the Message from webpage dialog box, click **OK**.

8. Click **Save**.

Approve a Case

Auto Approval

After a medical claim case is evaluated, it will be automatically approved under certain conditions.

This section describes the auto approval process.

PREREQUISITE

The claim case meets auto approval rules pre-configured in the system.

- Type of Claim is Medical.
- Case Classification is New Claim.
- Total payment amount is no more than 1,000.00.
- No manual adjustment on product evaluation amount.
- No product is terminated.
- No adjustment on claim payment on policy level.
- Case Evaluation decision is Admit.

Otherwise, the case has to be manually approved, see Manual Approval.

note

The auto approval rule is configurable.

1. The system checks whether the auto-approval is valid or not.
    - If auto-approval, the system approves the claim case automatically.
    - If not auto-approval, go to approve the case manually. For instruction about manual approval, see Manual Approval.
2. The system updates claim policy and product information.
3. The system updates the case status to Settled.
4. The system generates relevant claim payment records.
5. The system generates the claim settlement letter.
6. The system generates the SMS notification and then sends it to claimants and agents via the third party.

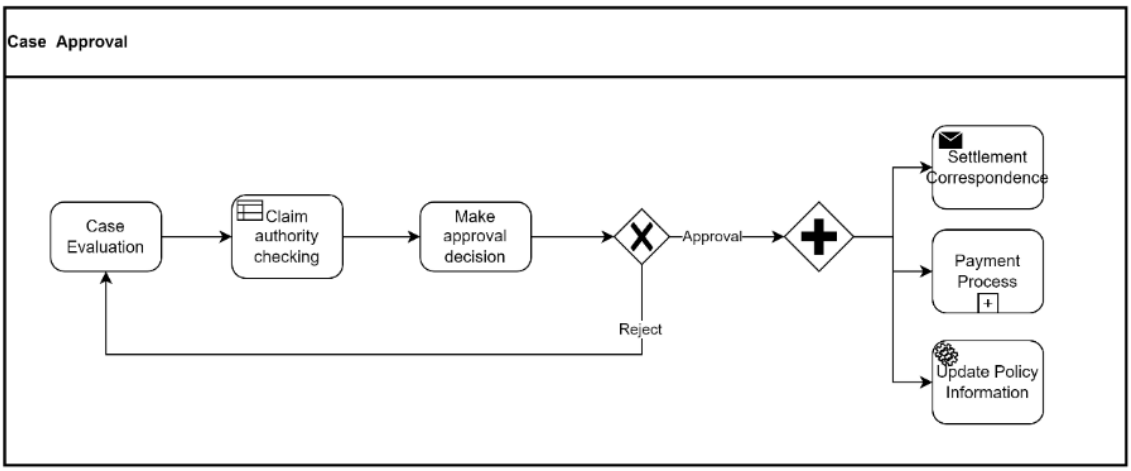

Manual Approval

After a case is evaluated, the claim approval officer needs to check the case information and decide whether to approve the case or not.

This section describes the process of case approval.

The following flowchart shows the workflow of manually approving a case.

Figure 15. Workflow of Case Approval

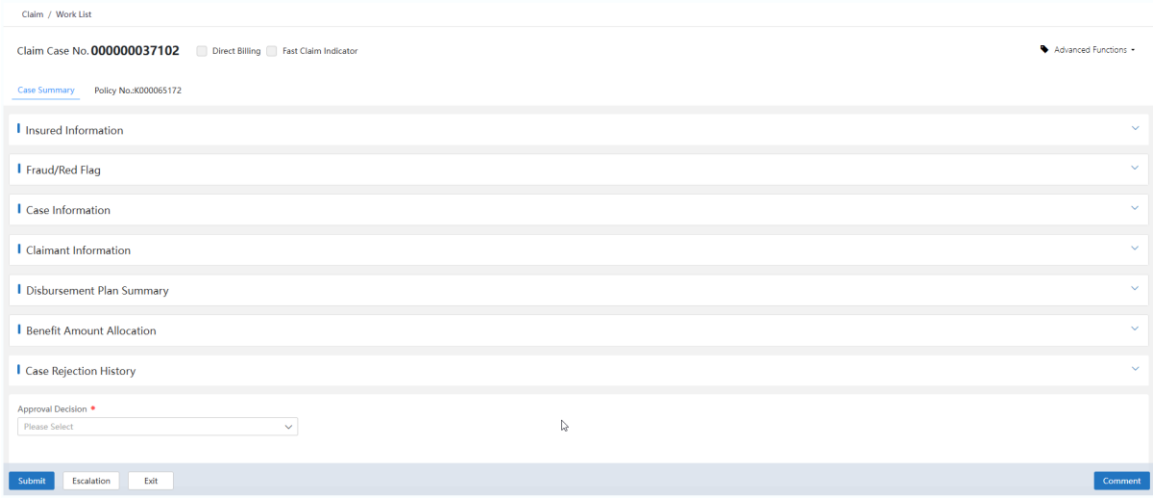

PREREQUISITE

Case status should be Waiting for Approval, Approval in Progress, Waiting for Escalation, Escalated, or Waiting for Reply.

1. Retrieve a claim case:
   a. From the main menu, select **Claims > Work List**.
   b. On the Claims Work List page, enter search criteria or use **Advance Search**.
   c. In the **Case No.** column, click a case number.
2. On the Case Approval page, select from the **Approval Decision** drop-down list:
   - To approve, select **Agree**.
   - To reject, select **Reject**.

Figure 16. Claims Approval Page

3. Click **Submit**. The system will:
   - Check the claim decision and update the case status accordingly.
   - Generate a claim settlement letter.
   - Generate a claim payment record. All claim accounting transactions will be posted to financial transaction history table.

Sub Tasks in Claims

Document List

PREREQUISITE

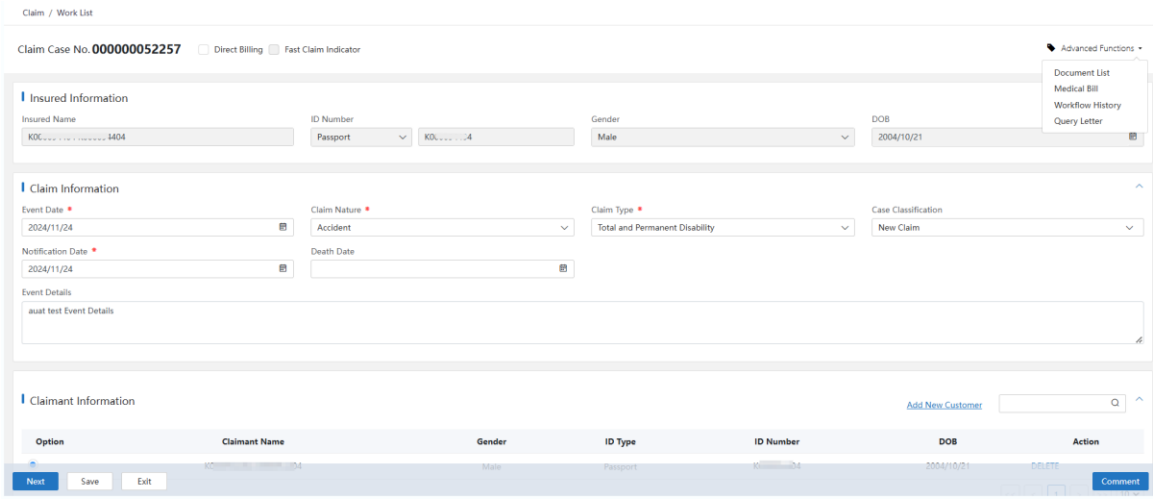

Claim case is in Acceptance or Evaluation stage

1. If the claim case is in Acceptance or Evaluation stage, to check and upload required documents, follow these steps:

note

Take claim case in Acceptance stage as an example.

a. On the Acceptance Summary page or Case Evaluation page, click **Document List**.

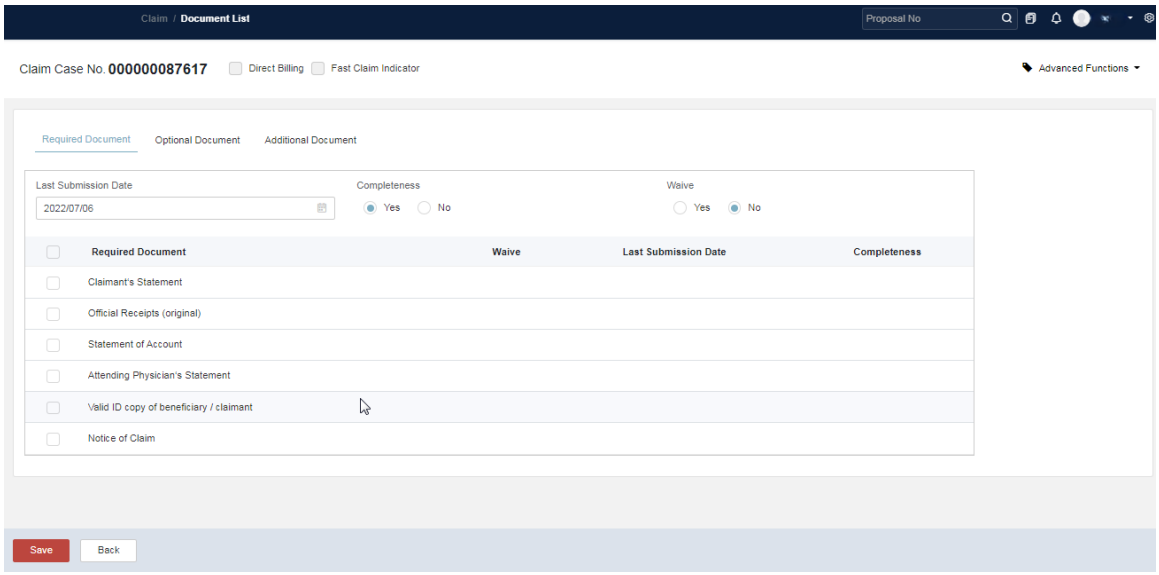

Step Result: The Document List page appears.

b. On the Document List page, you can check documents in the **Required Documents** and **Optional Documents** section.

c. If needs to add new document record, in the **Additional Document** section, type document name in the **Document Name** box, type document description and No. of copies if necessary.

d. Click **Save**.

Figure 17. Document List Page

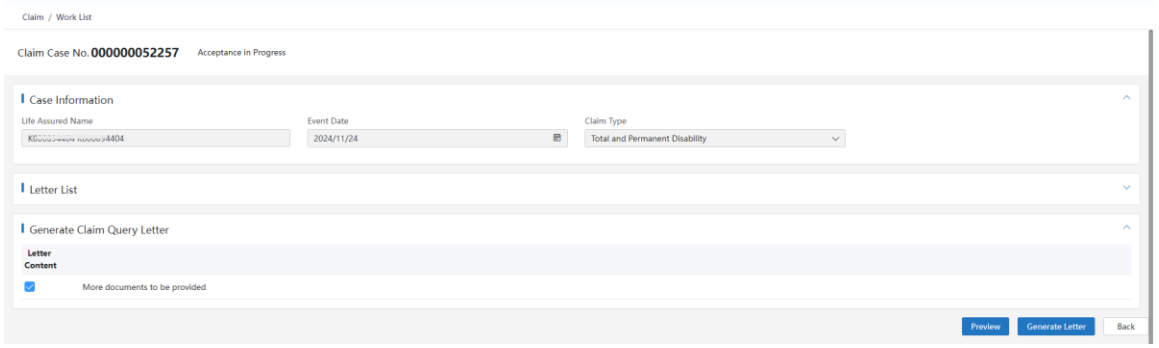

Query Letter

If more documents, signature and compliance need to be provided, you need to send a query letter to the claimant to confirm.

PREREQUISITE Claim case is in Acceptance, evaluation stage. Document Checklist is updated.

1. Click **Query Letter**.
2. On the Query Letter page, in the **Generate Claim Query Letter** section, “More documents to be provided” is auto checked. Click **Generate Letter**.

Figure 18. Query Letter Page

Step Result: There is a trigger point and data extraction for query letter.

3. Click **Back**.

Medical Bill Entry

If this case is a medical case, you need to create a new medical bill and enter medical bill information in claim acceptance and evaluation stage. In claim approval, entered medical bill information can be queried by approval users and it is read only.

PREREQUISITE Claim case is in Acceptance, Evaluation stage.

1. Click **Medical Bill**.

Step Result: Default is Medical Bill Summary page.

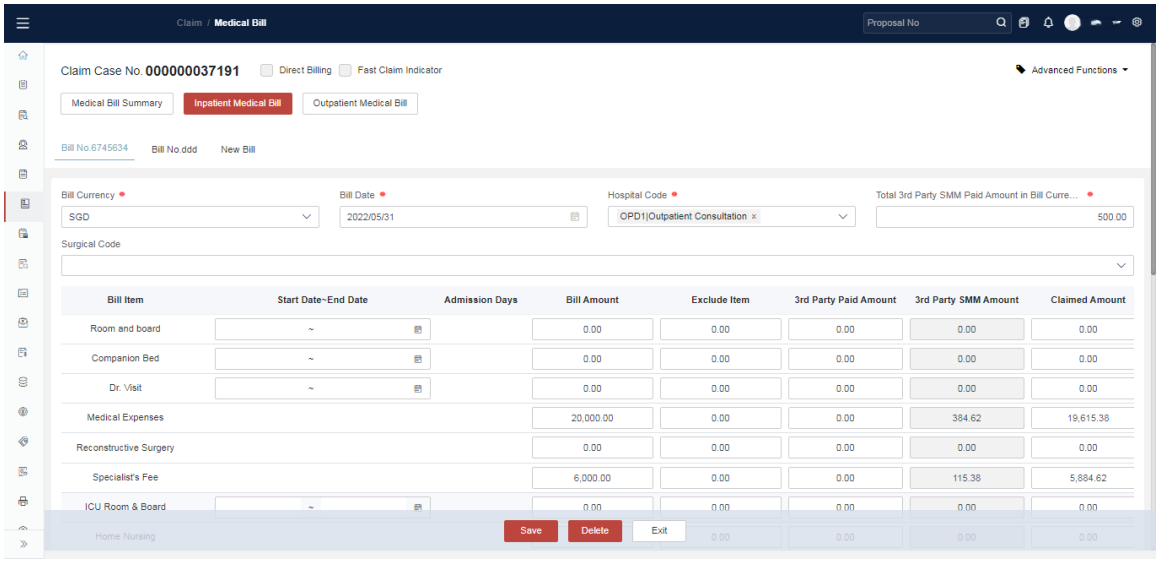

2. On the Medical Bill entry page, click **Inpatient Medical Bill** or **Outpatient Medical Bill** to enter a new medical bill.

note

- *The items are different and configurable for Inpatient and Outpatient bills*.
- *There will be a mapping between liability and bill type + item. When calculating, the system will use the mapping relationship to get the initial parameters for the liability*.

3. In the **Inpatient Medical Bill** or **Outpatient Medical Bill** page, the user can input the detailed medical bill information in the **New Bill** tab.

Figure 19. Medical Bill Entry Page

4. Click **Save**.

note

The added bill can be deleted by clicking.

Delete. 5. Click **Exit** to to acceptance or evaluation page.

Escalation

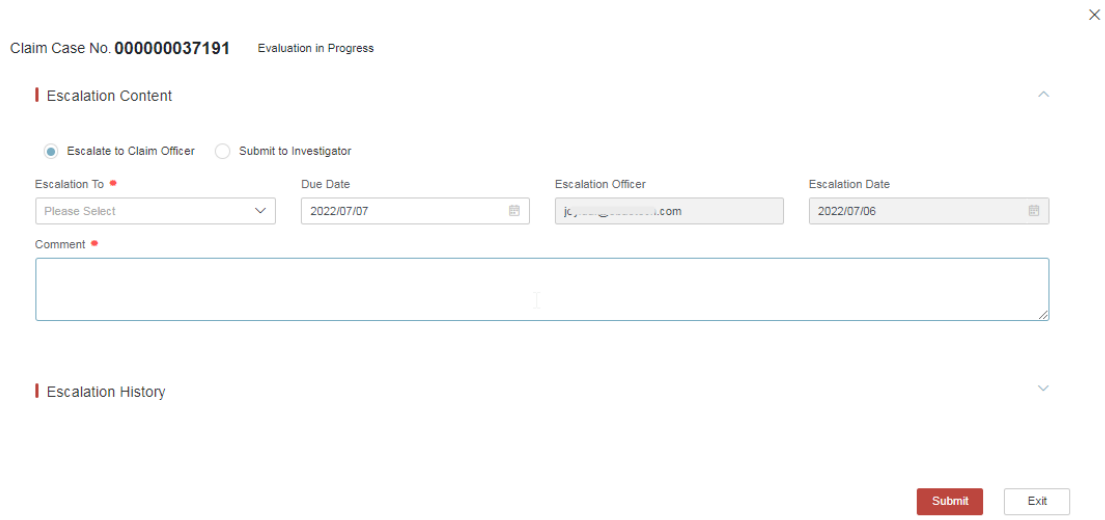

During case acceptance, case evaluation, or case approval, a case can be sent to a senior claim officer, an investigator for processing if required. The escalation history of a case can be viewed, including reply content and escalation decision. In addition, any escalation can be withdrawn.

This section describes how to escalate a case and how to retrieve an escalation case.

PREREQUISITE
Case status is Waiting for Acceptance, Acceptance in Progress, Waiting for Evaluation, Evaluation in Progress, or Approval in Progress.

1. On the Acceptance Summary page, Case Evaluation page or Case Approval page, click **Escalation**.
2. On the Escalation page, enter escalation content in the **Comment** box.

Figure 20. Escalation Page

3. Follow these steps to submit this case to senior claim officer or investigator:

a. Select **Escalate to Claim Officer** or **Submit to Investigator**.

b. Select a claim officer or an investigator from the **Escalate** to drop - down list.

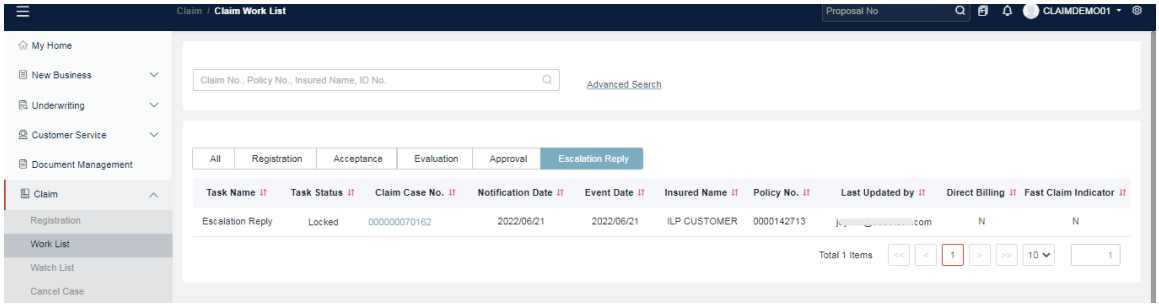

c. Update **Due Date**.

4. Click **Submit**.
5. Senior Claim officer and Investigator could follow steps below to retrieve an escalation case:

a. From the main menu, select **Claims > Work List**.

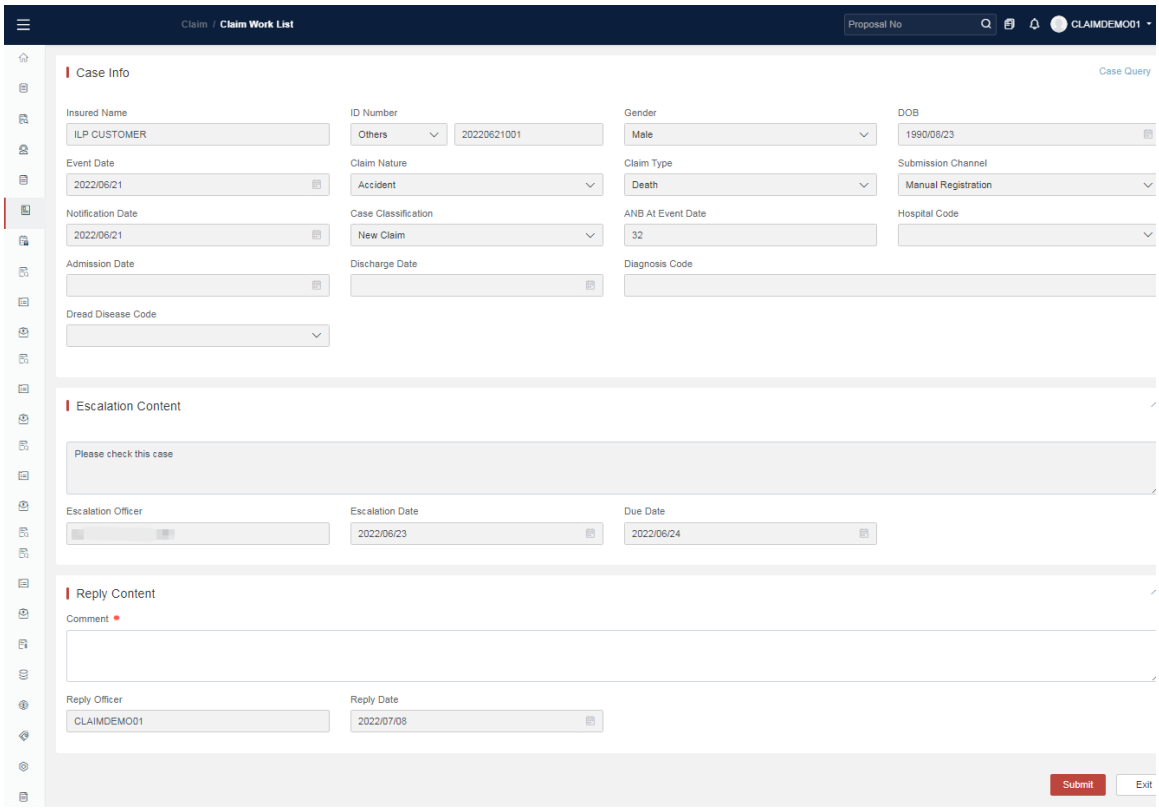

b. On the Claim Work List page, enter criteria and then click **Search**.

c. In the **Case No.** column, click a case number.

6. On the **Escalation Reply** page, enter reply comment under **Reply Content** area.

Figure 21. Escalation Reply Page

7. Click **Submit**.

Underwriting

During case evaluation, sometimes you need to submit the claim case to make underwriting. This section describes how to submit and underwrite a claim case.

PREREQUISITE
Underwriting should be made before case approval. Case status should be Evaluation in Progress.

1. On the Evaluation page:
   a. Click **Underwriting**.

b. In claim underwriting application UI, select Policy, input content and then send the selected policies to UW workbench

c. Underwriter retrieve the policy in UW workbench and reply to claim user. See User Guide of Underwriting.

d. After receiving comments from UW user, continue to do the evaluation.

Figure 22. Claim Evaluation Main UI

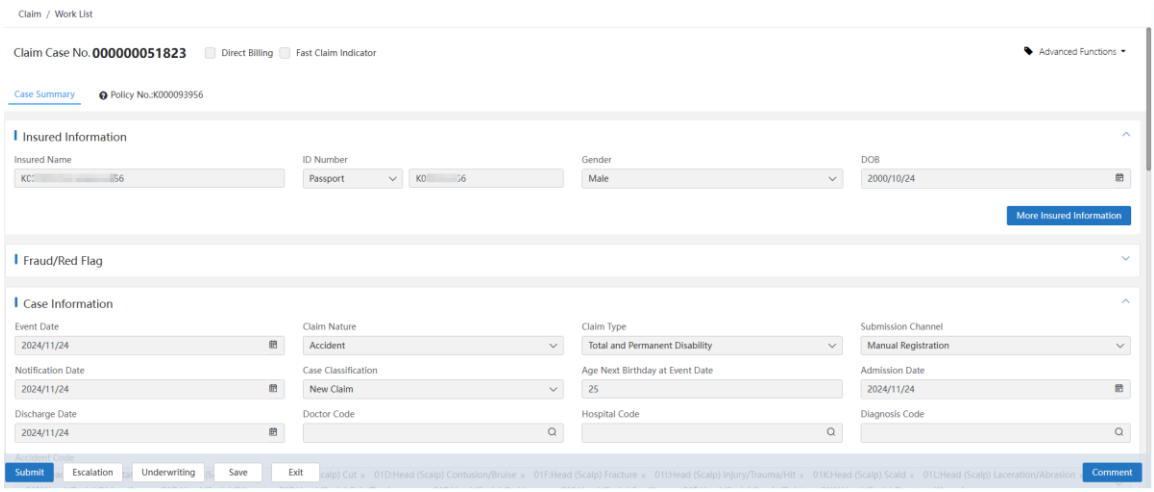

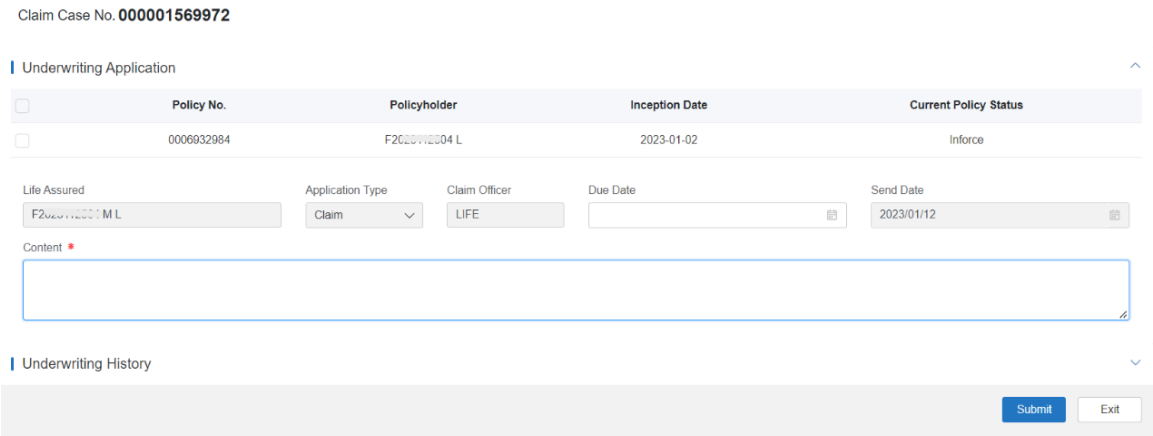

Figure 23. Claim UW Main UI

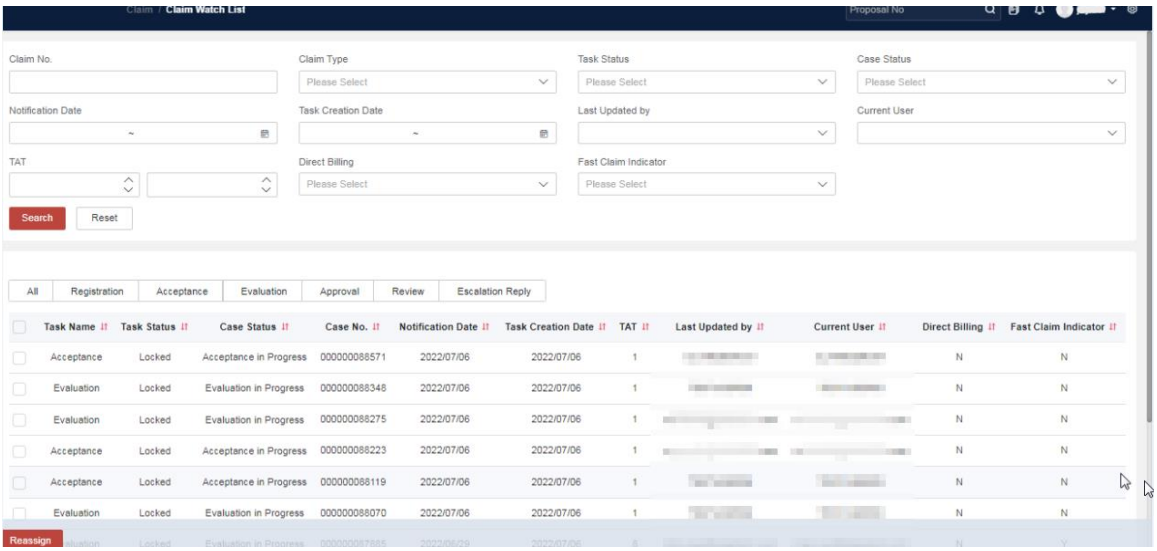

Advanced Claims Functions

Claims Watch List

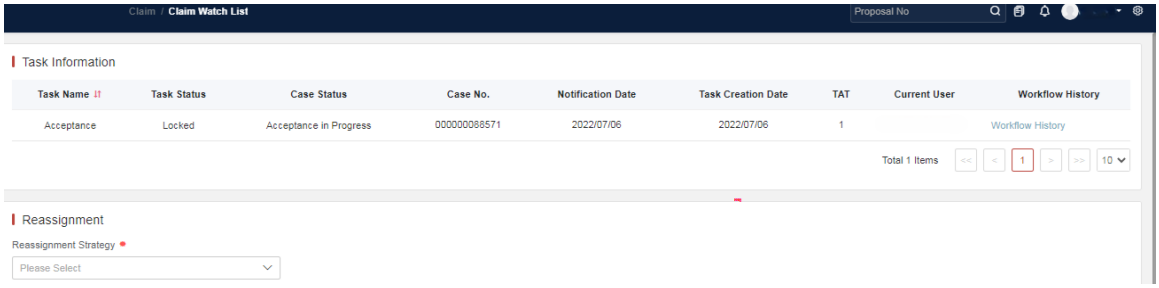

During claim process, you can reassign a task to a certain claim officer or exclude current users.

1. From the main menu, select **Claims > Watch List**.
2. On Claim Watch List page, enter criteria and then click **Search**.

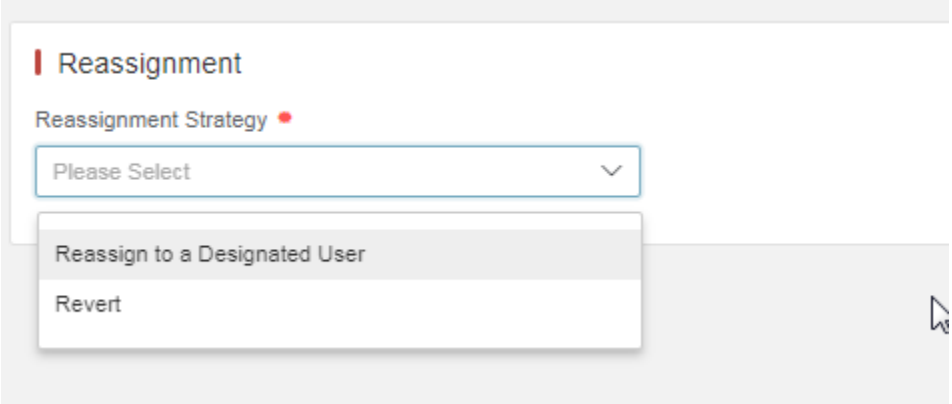

3. In the Search Result area, click a case number to select the case and then click **Reassign**.

Step Result: The Reassign To page appears.

4. On the Reassign To page, select Reassignment Strategy based on requirement:

• Reassign to a Designated user, go to step 5
• Revert, go to step 6

5. On the Reassign To page, select Reassign To from dropdown.
6. On the Reassign To page, select Exclude Current User or not.
7. Click **Submit**.
   Step Result: The case is reassigned to the target operator or excludes the current user.

Change Disbursement Plan

After a case is approved, the outstanding installment payment can be changed if required. This section describes how to change the disbursement plan.

PREREQUISITE

- Case Status is *Settled*.
- Case has pending payment or unpaid payment.

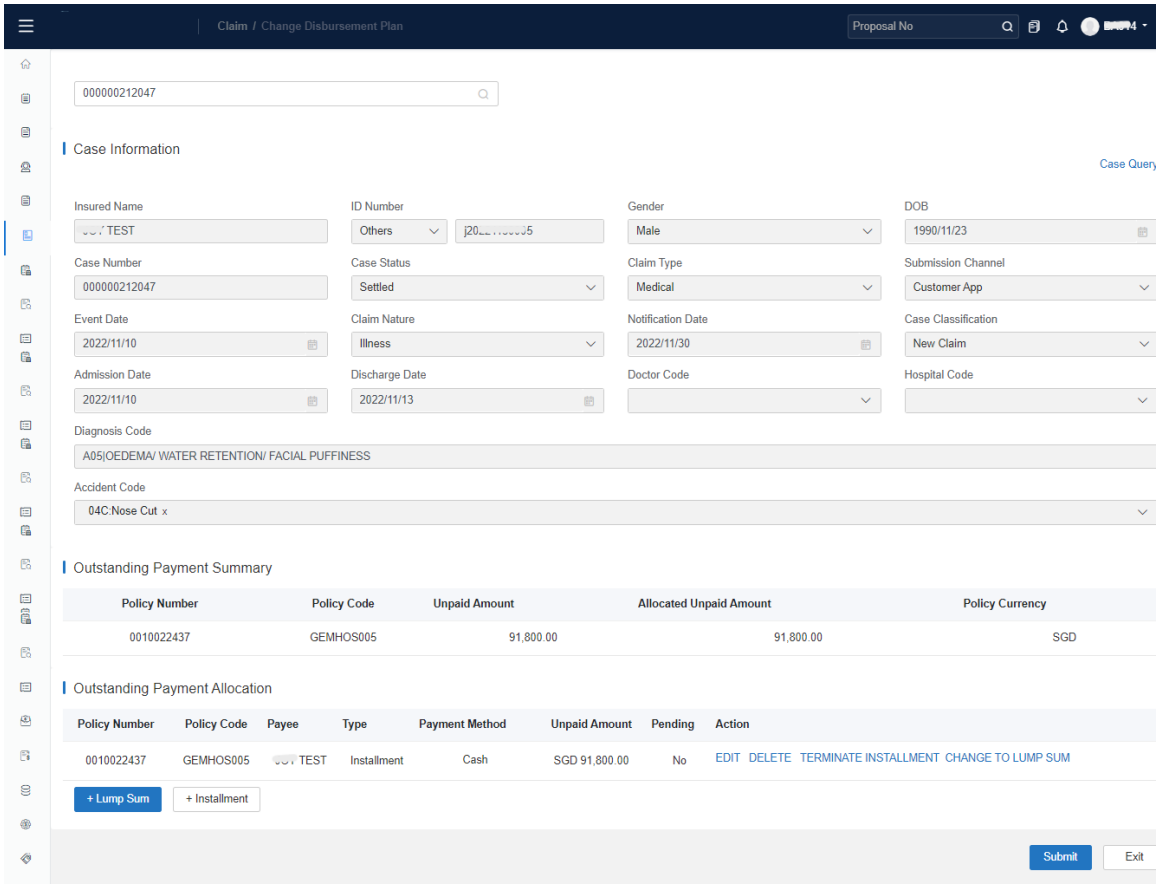

1. From the main menu, select Claims > Change Disbursement Plan.

- On the Change Disbursement Plan page, enter a case number and click blank area.
  Step Result: Case Information appears.

note

If the case status is NOT settled, then case information will NOT be displayed.

Figure 24. Change Disbursement Plan UI

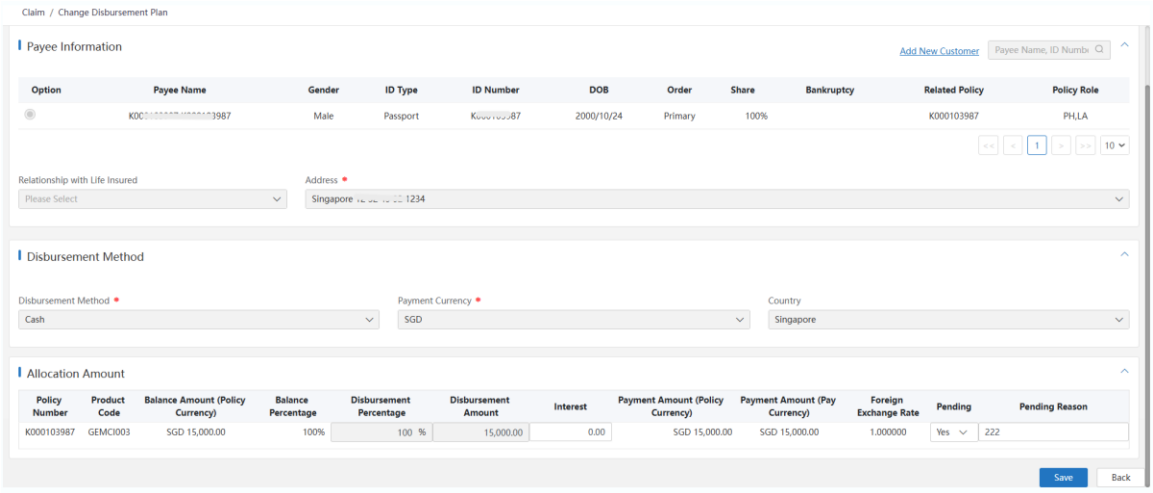

2. In the Outstanding Payment Allocation area, act according to your decision.
   - To terminate this installment, click **Terminate Installment**.
   - To change installment to lump sum, click **Change to Lump Sum**.
   - To change pending status (Yes or No) or interest, click **EDIT**. Go to Step 4.

note

You can only change installment to Lump Sum when there are still unpaid installments.

3. If you want to maintain the payee information, act according to your decision.
    - To delete a payee, select the existing disbursement plan of the payee, and then click **Delete**.
    - To add a payee, click **+Lump Sum** or **+Installment**, see Make Disbursement Plan.
4. On the Change Disbursement Plan detail page, if there is pending payment, to release pending payment, on the Change Disbursement page, select No from the Pending Payment drop-down list. And then click **Save** and then **Back**.

5. On Change Disbursement Plan UI, click **Submit**.

Step Result: The fee records are generated or updated accordingly. Upon submission of “change disbursement plan”, the system will create policy party roles for the claim payee(s) for all the policies in the disbursement plan.

Cancel a Case

This section describes how to cancel a case directly.

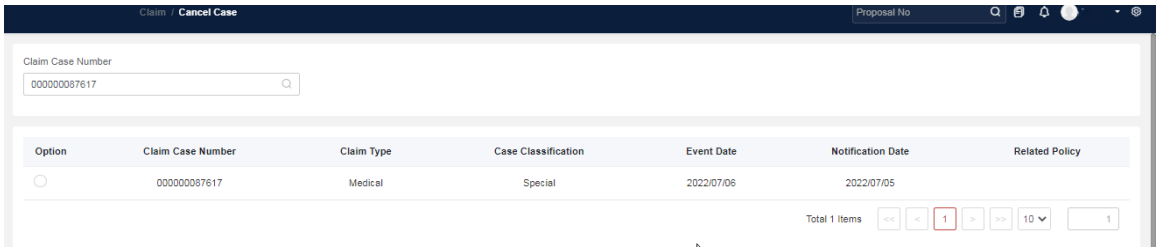

PREREQUISITE

- The case is at registration or acceptance or evaluation or approval stage.
- When cancelling a claim before approval, the case status cannot be Settled, Cancelled or Withdrawn.

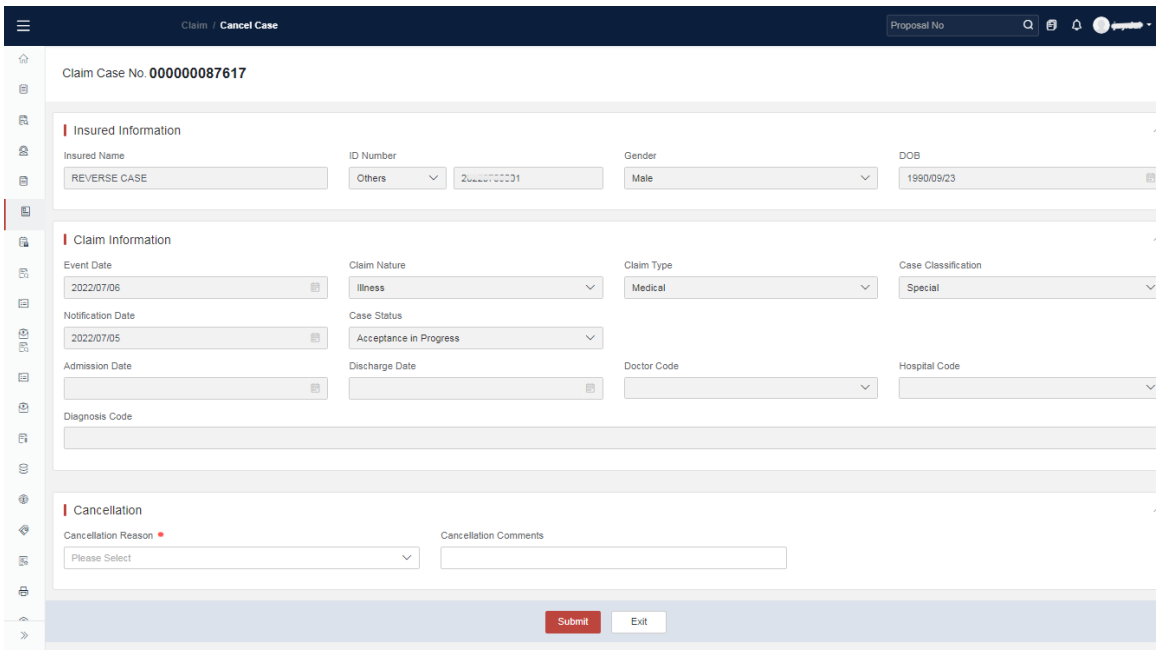

1. From the main menu, select **Claims > Cancel Case**.

2. On the Cancel Case page, type a case number in the **Case No.** and then click in the blank area or click **Search**.

Step Result: The searched case is listed in the search result.

3. Select the case and click **Submit**.
   Step Result: Cancel Case page appears.
4. Click **Cancellation**.
5. Select **Cancellation Reason** and add comments.
   Figure 25. Cancel Case Page

6. Click **Submit**.
7. On the Message from webpage dialog box, click **OK**. And then the system will change the case status to Cancelled.

Step Result:

- Generated claim reserves will be cancelled if any.

- If there is pending transactions generated after case acceptance, the pending fund transactions will be cancelled.

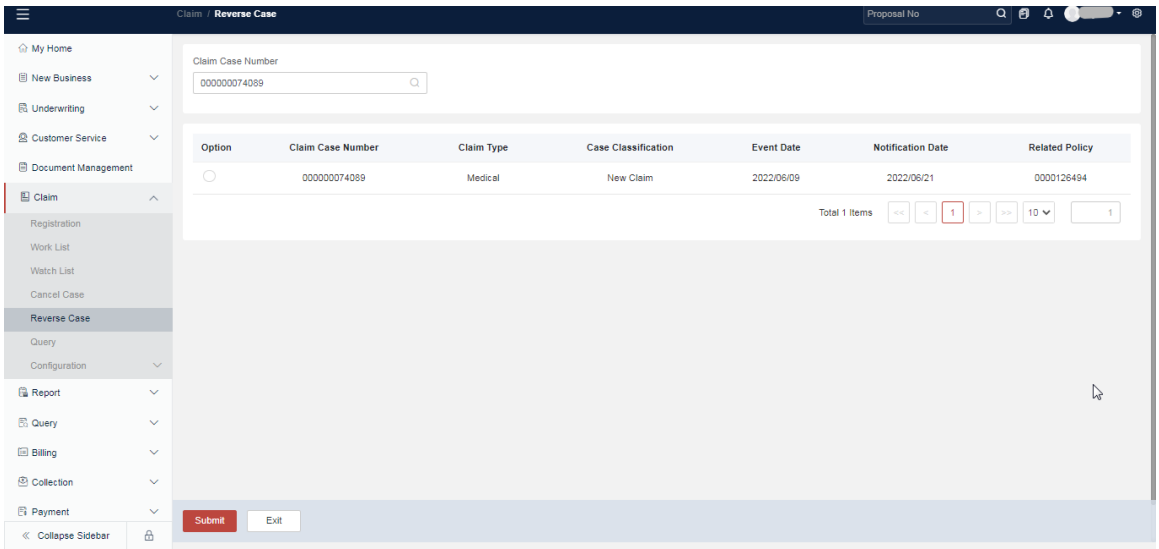

Reverse Case

This section describes how to reverse a case.

PREREQUISITE

- Case status which is Settled.
- Actual Payment Status is unpaid.
- Policy Status is inforce.
- Policy is not frozen.
- There is no on - going claim for the policy.
- There is no completed transactions (except renew, Partial Withdrawal, Apply Policy Loan, Auto Premium Loan) after case settled.
- There is no product terminated in the case.
- There is waiver premium generated after the claim case.

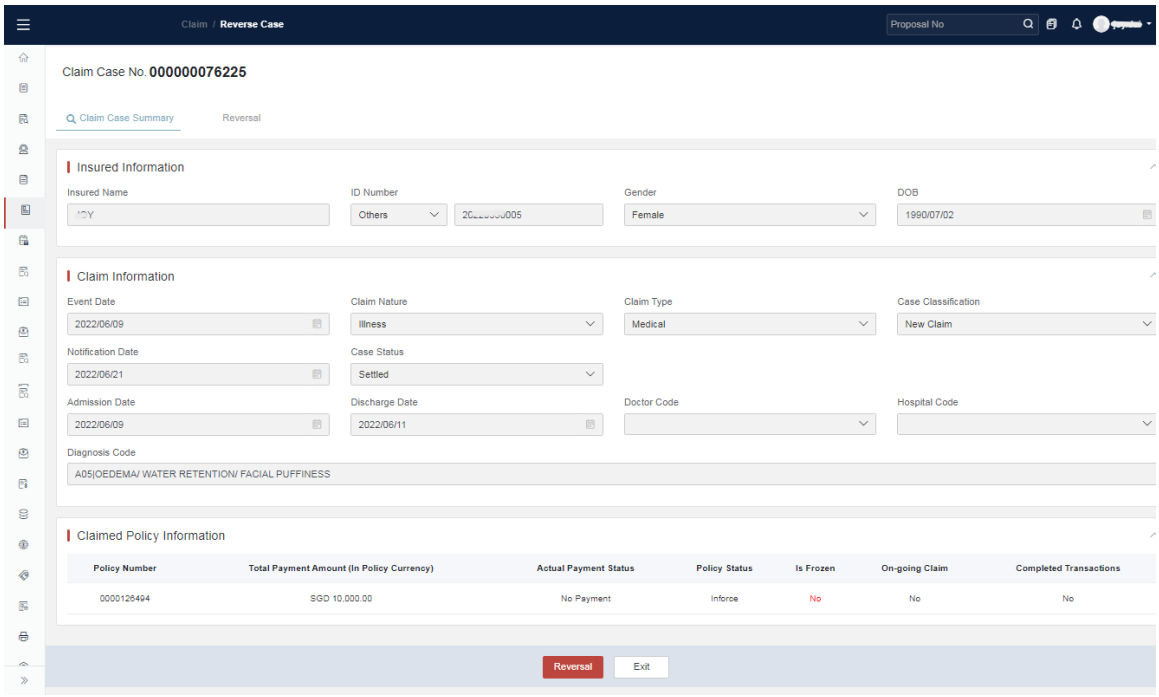

1. From the main menu, select **Claims > Reverse Case**.
2. Input case no. to search the case to be reversed.

3. Select the case and click **Submit**.

Step Result: Reverse Case Summary page displays.

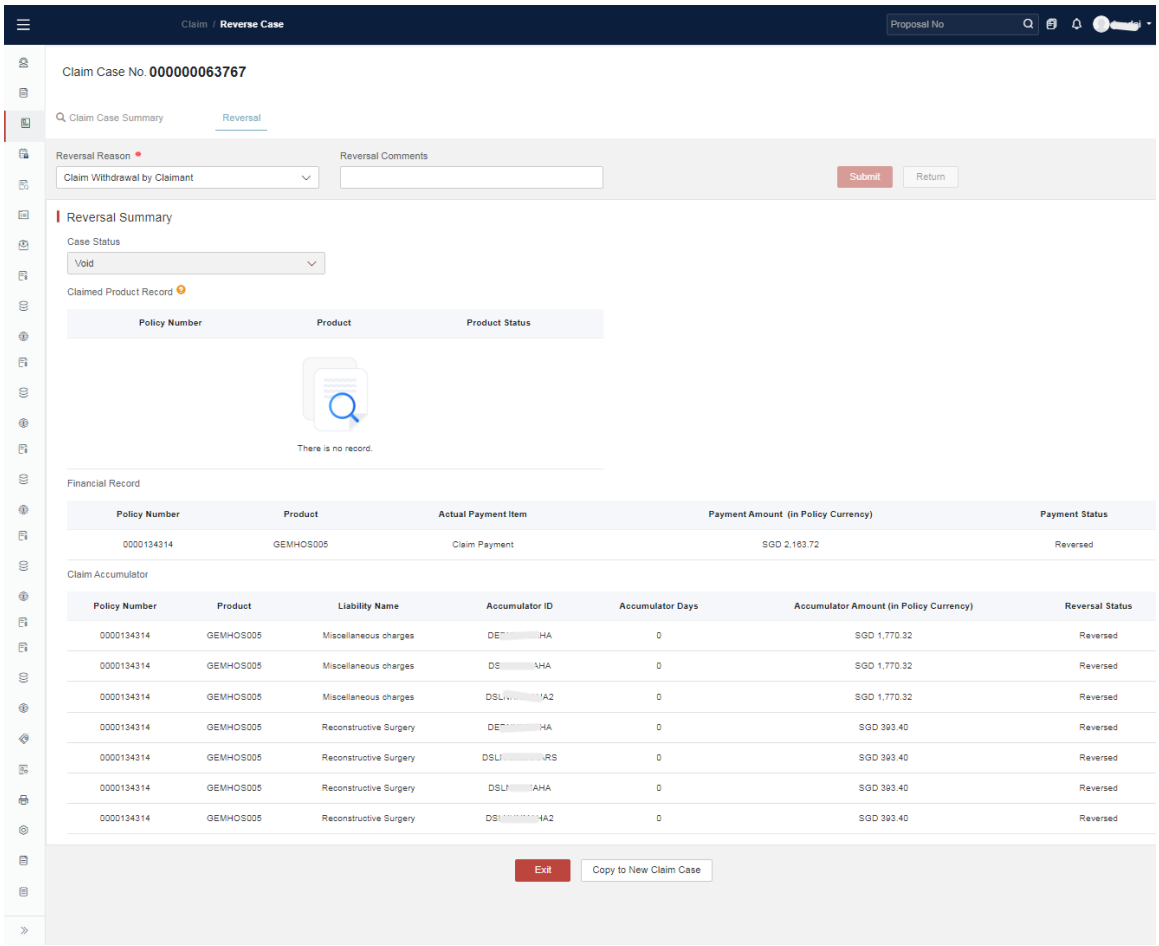

Figure 26. Reverse Case Summary Page

4. Click **Reverse**.
   Step Result: Reversal page displays.

5. Input Reverse Reason and comments, then click **Submit**.
   Step Result:The case status is Void. Reversed product information, finance information and Accumulator information are updated in Reversal Summary Section.

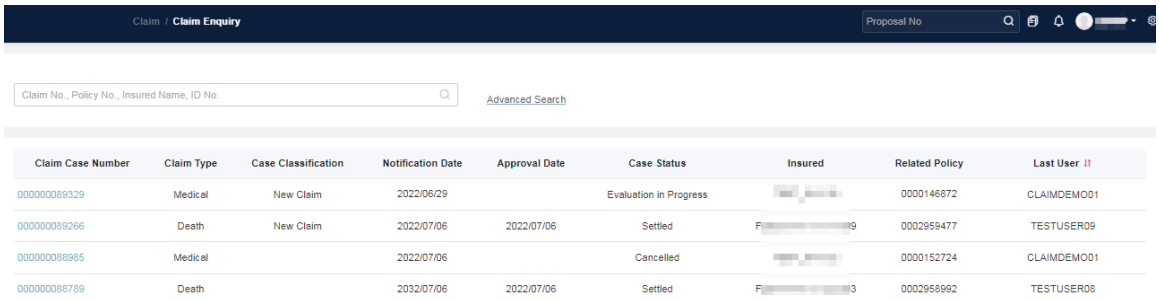

Figure 27. Reversal Page

Claims Query

This section describes how to query comprehensive information of a specified claim case. All claim cases can be queried.

1. From the main menu, select **Claims > Query**.
2. Input case no. or Policy no. or insured name or ID no. to quickly search the case to be queried. Or Input more details by **Advanced Search**.

3. Click **Case No.** to view details of the case.

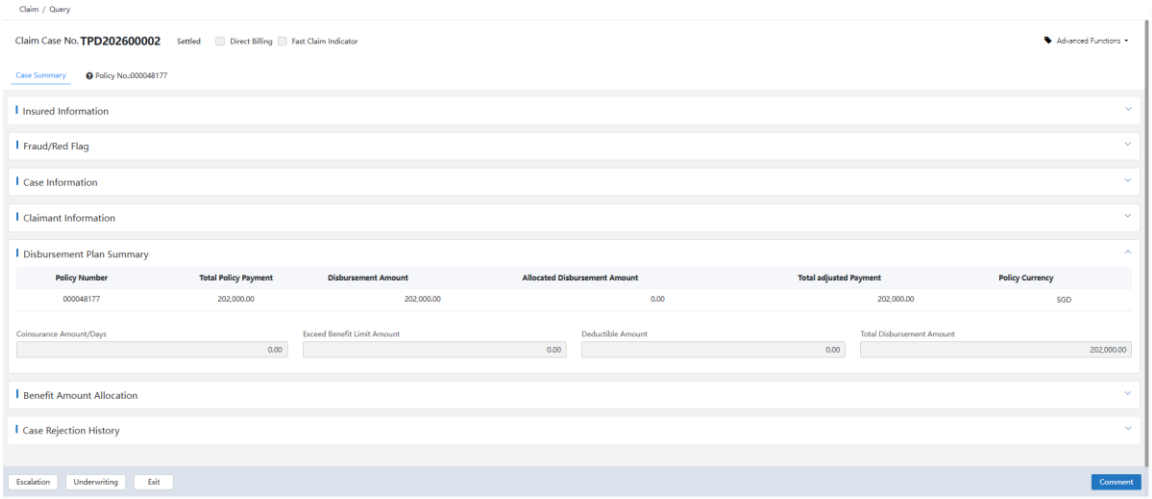

STEP RESULT: Query Claim Case Detail Information page is displayed.

note

• *The page displayed varies with different case status.*

• *You can click the buttons on case summary or policy tab to view the relevant information.*

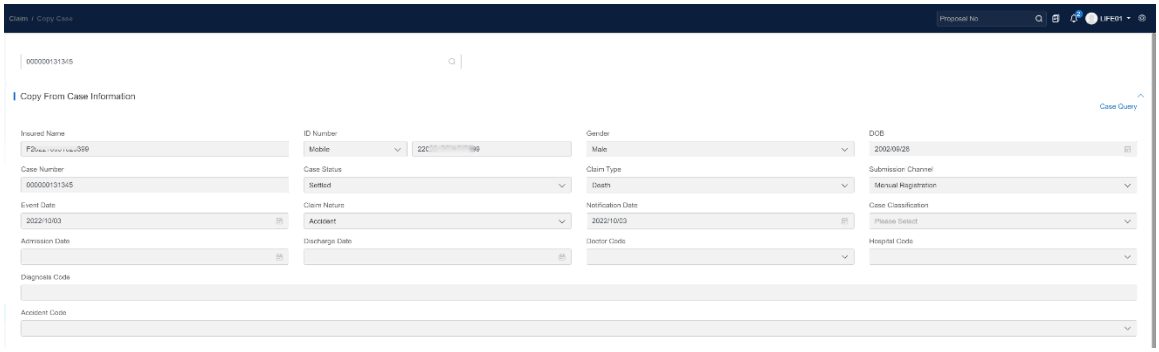

Figure 28. Claims Query Page

Copy Case

This section describes how to copy an existing case. All existing claim cases can be copied.

1. From the main menu, select **Claims > Copy Case**.
2. Input case No. to quick search the case to be copied.

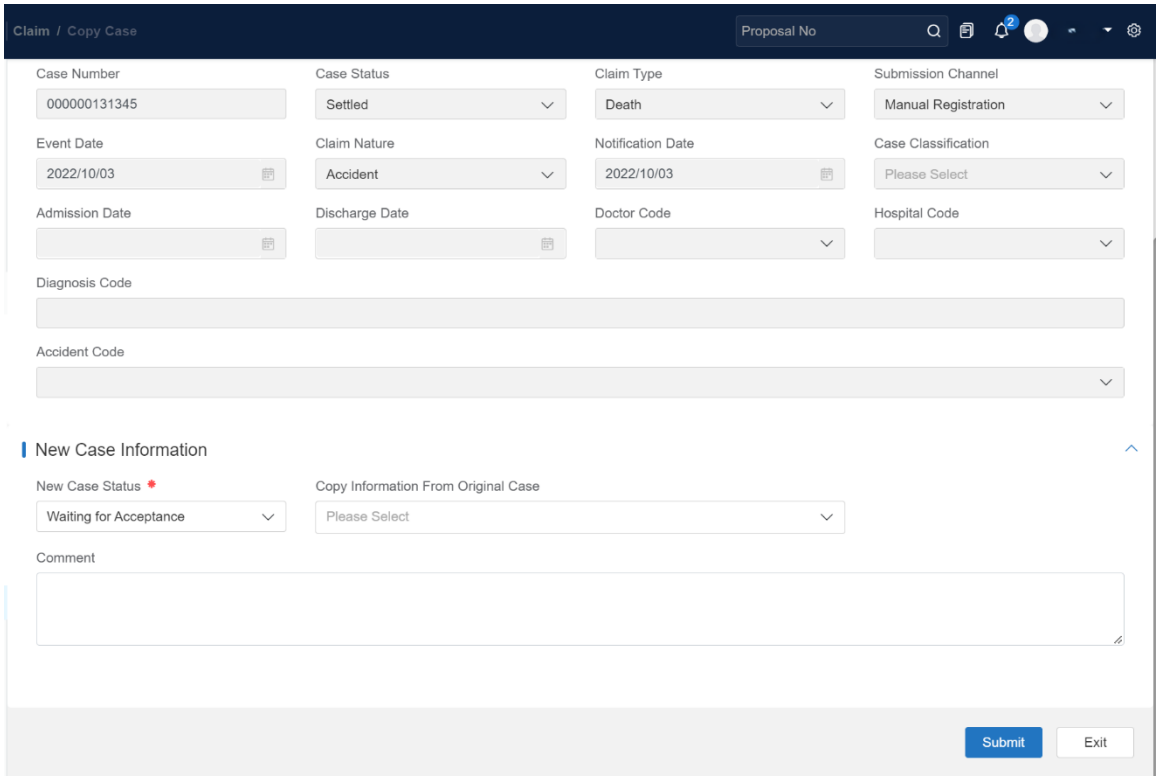

STEP RESULT: The Detail Information about the copied claim case is displayed.

3. In the New Case Information section, select New Case Status (mandatory) and Copy Information from Original Case (optional) in the Option column.

You can select two case status, Waiting for Acceptance or Waiting for Evaluation. You can select three copy information from the original case, medical bill, document list or image.

You can make some comments in the comment area.

Figure 29. Copy Case Page

4. Click **Submit**.
   Step Result: New claim case is created. Then you can go to the work list or click the next button to continue.

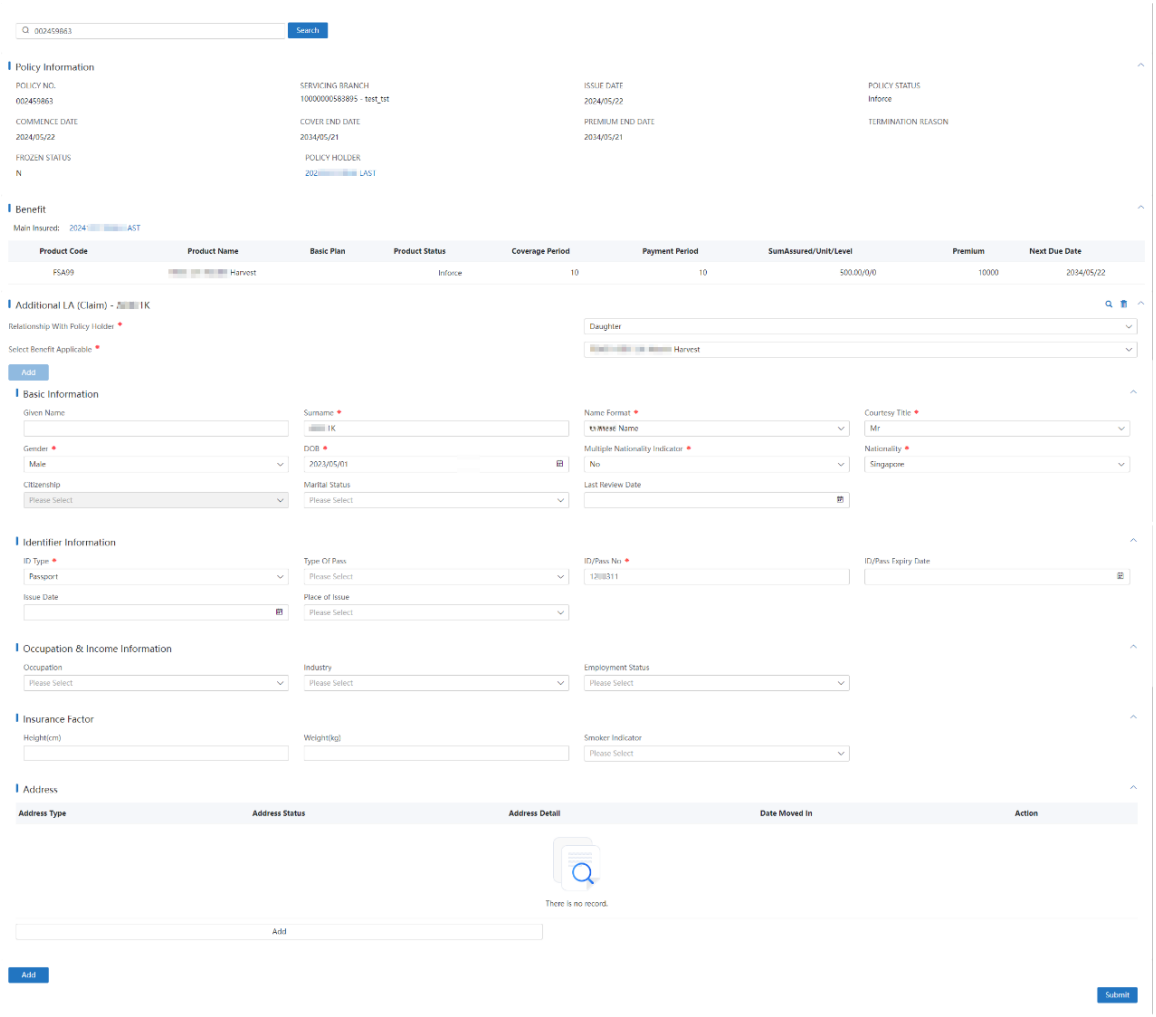

Add Insured for Claim

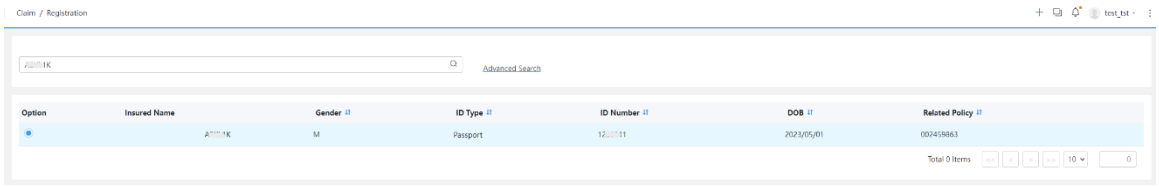

This section describes how to create or edit the insured details and attach to existing benefit for claim purpose. This function can be used for the policy which insured is anonymous, for example free child cover or newborn child.

1. From the main menu, select **Claim > Add Insured for Claim**.
2. Input policy No. to search an existing policy information.

Figure 30. Add Insured for Claim

3. Input additional LA information including basic information and submit.
4. The new additional LA will be added on the policy.
5. The new additional LA can be applied to register the claim case and the claim process of registration / acceptance / evaluation will support using newly added insured for claim case.

Medical Report Fee Payment

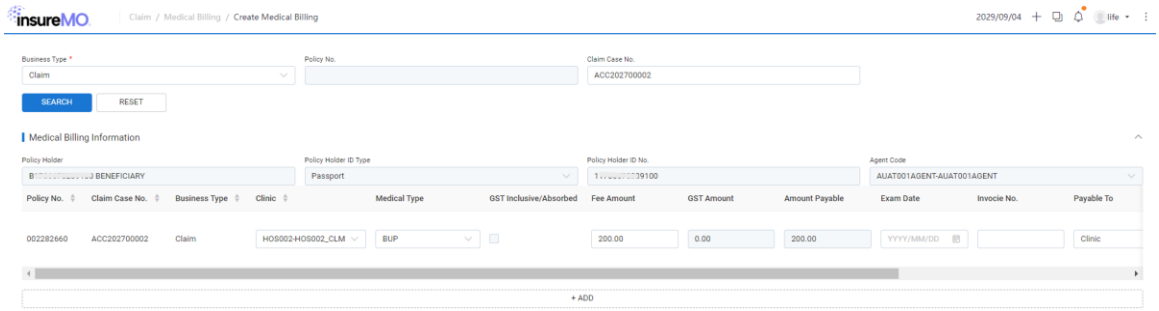

Create Medical Billing

This section describes how to create medical report fee to hospital or clinic in claim processing.

1. From the left menu, select **Claim > Medical Billing > Create Medical Billing**.
2. Input search criteria such as Business Type as Claim, Claim Case No and click **Search**.
3. Apply medical billing information such as Clinic, Medical Type, Fee Amount, GST Amount etc.
4. Click **Confirm** to submit medical billing information.

STEP RESULT: Upon medical billing submission, the system will generate payable Fee Amount and GST Amount. The actual payment amount to hospital/clinic will be total of Fee Amount + GST Amount, i.e. = Amount Payable after payment requisition or authorization.

Figure 31. Create Medical Report Fee payment

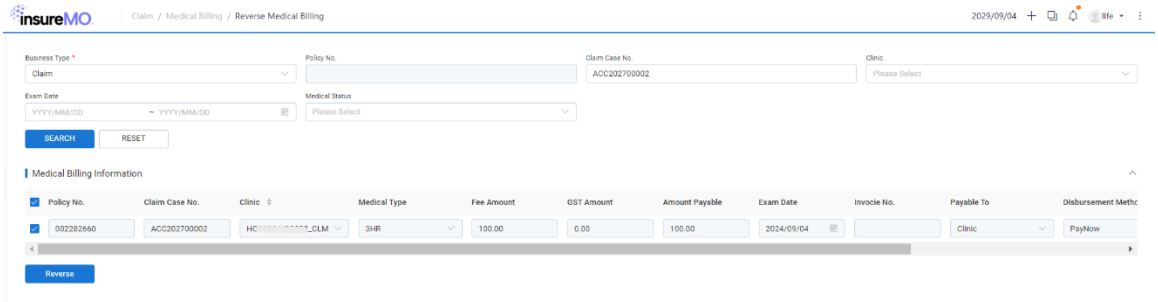

Reverse Medical Billing

This section describes how to reverse medical report fee payment for claim.

1. From the left menu, select **Claim > Medical Billing > Reverse Medical Billing**.
2. Input search criteria such as Business Type as claim, Claim Case No, etc.
3. Select medical report fee record which need reverse.
4. Click **Reverse** to submit medical report fee reversal.

Figure 32. Reverse Medical Report Fee Payment

Download CPF Submission File

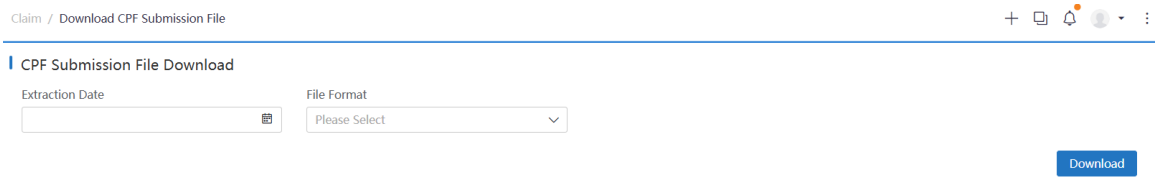

After the system will extract payment records with disbursement method as CPFB in a daily batch, users can access this UI to download the CPF submission file.

1. From the left menu, select **Claim > Download CPF Submission File**.
2. Input Extraction Date and File Format and click **Download**.
   STEP RESULT: File named DDMMYYYY CPFB Submission File is generated.

note

• In event there are no records matching the selected extraction date, the system should still generate a submission file with required column headers with note in file: “There is no record generated.”

Figure 33. CPF Submission File Download

Appendix A: Field Description

Summarize page

Field Description for Registering a Case

Table 2. Description of Fields on the Register Case Page - Search

Field	Description
Policy No.	Policy number of the customer.
Insured Name	Name of the life assured.

Field	Description
Gender	Gender of the Life Assured. Select from drop-down list: - Female - Male - Unknown
ID Type	Party's ID Type, for example, Passport.
ID Number	Party's ID Number, for example, Passport No. = 12345.

Table 3. Description of Fields on the Case Registration Page

Field	Description
Claim Information	Claim Information.
Event Date	Rules for Event Date: - Event date should be no later than the system date. - Field is updatable in acceptance stage.
Event Details	The detail information of the happened incident.
Claim Nature	Select from the drop-down list: - Illness - Accident - Suicide
Type of Claim	Select from drop-down list. For example, Death, Medical, etc.
Case Classification	Select from drop-down list. Can be configured via code table. - New Claim - Further Claim - Adjustment - Special - ....
Original Case No.	This field is mandatory if Case Classification is Appeal.
Notification Date	Default Notification Date as system date, the user is able to edit manually.

Field	Description
	Rules for notification date: - Notification Date should be no later than the system date.
Death Date	Rules for death date: - Death Date should be no later than the system date.
Reporter Information	Reporter Information.
Reporter Name	Reporter's Name. It depends on the Type of Claim selected.
Relationship with Insured	Select from drop-down list, for example, Spouse.
Report Via	Select from drop-down list, for example, Email.
Mobile	Reporter's mobile phone number.
Email	Format: a@b.c
Country/Territory	Select from drop-down list.
Address	Reporter's address.
Postal Code	-
Handling Producer	Select from drop-down list with both agent code and name.
Producer Mobile	Agent mobile phone number.
Producer Email	Handling producer's email.
Comments History	Read only. It is the comment made by the previous claim officer.
General Comments	Free Text. Comment of the current claim officer.

Field Description for Accepting a Case

Table 4. Description of Fields on the Case Acceptance Entry Page

Field	Description
Claim Case No.	Generated in the case registration stage and cannot be changed manually.
Insured Information	Insured Information.
Insured Name	Name of the Life Assured.
ID Number	ID Type + ID Number of the Life Assured.
Gender	Gender of Life Assured.
DOB	DOB of Life Assured.
Claim Information	Claim Information.
Event Details	The detail information of the diagnosis/cause of death.
Claim Nature	Select from drop-down list: - Illness - Accident - Suicide
Claim Type	Select from drop-down list. For example, Death, Medical etc.
Case Classification	Select from drop-down list. Can be configured via code table. - New Claim - Further Claim - Adjustment - Special - ....
Notification Date	Rules for notification date: - Notification Date should be no later than the system date.
Death Date	Rules for death date: - Death Date should be no later than the system date.
Event Details	-

Field	Description
Reporter Information	Reporter Information.
Reporter Name	Reporter's Name. It depends on the Type of Claim selected.
Relationship with Insured	Select from drop-down list, for example, Spouse.
Report Via	Select from drop-down list, for example, Email.
Mobile	Reporter's mobile phone number.
Email	Format: a@b.c
Country/ Territory	Select from drop-down list.
Address	Reporter's address.
Postal Code	-
Handling Producer	Select from drop-down list with both agent code and name.
Producer Mobile	Agent mobile phone number.
Producer Email	Handling producer's email.
Additional Information	Additional Information.
Diagnosis Code	Click **Search** to fuzzy diagnosis codes or diagnosis name from code table.
Accident Code	Click the field to select incident codes from dropdown.
Admission Date	The date when the insured gets in hospital.
Discharge Date	The date when the insured leaves hospital.
Foreign Hospital	Input the foreign hospital name if any.
Doctor Code	Select from the drop-down list.
Hospital Code	Select from the drop-down list.
Dread Disease Code	Select from the drop-down list.
Chronic Disease	Select from the drop-down list.

Field	Description
Loss Of Income	Select from the drop-down list.
Place of Treatment	Select from the drop-down list.
Congenital Indicator	Select from the drop-down list.
Cancer Site	Select from the drop-down list.
Cancer Stage	Select from the drop-down list.
Unknown Pre-existing Conditions	Select from the drop-down list.
Actual Ward Level	Select from the drop-down list.
Voluntary Ward Upgrade	Select from the drop-down list.
Original Case No.	This field is mandatory if Case Classification is Appeal.
Next	Click **Next** to go to acceptance summary page
Save	Click **Save** to go to save the claim acceptance data entry information
Exit	Click **Exit** to return to Claim WorkList

Table 5. Description of Fields in the Acceptance policy page

Field	Description
Accept Policy – Policy Information	Accept Policy – Policy Information.
Policy No.	By Default, policy number.
Policyholder	By Default, policyholder name.
Current Policy Status	By Default, the current policy status.
Policy Status at Event Date	By Default, extract the policy status at event date.
Accept Policy	By Default, set **No**. If any product is set as Accept in product information, then auto set as **Yes**.

Field	Description
Freeze Policy	By Default, set the flag according to configuration by claim case type. Whether freeze policy tag is allowed to change refers to configuration.
Policy Currency	By Default, the currency of the policy.
Bankruptcy Involved	-
Handling Producer	-
Producer Mobile	-
Servicing Agent	The policy current service agent, agent code – agent name.
Servicing Agent Mobile	The mobile number of current policy service agent.
Servicing Agent Email	The email of current policy service agent.
Servicing Agent Reporting Manager	-
Beneficiary	The beneficiary on the policy. **N** – there's no beneficiary on the policy. **Y** – there's beneficiary on the policy, click to display basic information of the beneficiary.
Trustee	The trustee on the policy. **N** – there's no trustee on the policy. **Y** – there's trustee on the policy, click to display basic information of the trustee.
Assignee	The assignee on the policy. **N** – there's no assignee on the policy. **Y** – there's assignee on the policy, click to display basic information of the assignee.
Product Information	Product Information.
Product Name	All product under the policy.
Accept Product	By Default, set as **N**. Claim users can manually change as **Y** to accept the policy.

Field	Description
Notified Amount	The claim reserve amount will auto calculate by formula if accept product tag is **Y**.
Sum Assured	Sum Assured at Event Date.
Insured Name	The insured name of the product.
Product Status at Event Date	Product status at event date.
Current Product Status	Current policy status.
Commencement Date	-
Expiry Date	-
Reinsurance	-
Save	Click to save the policy acceptance decision.
Back	Click to back to previous page.

Table 6. Description of Fields in the Acceptance Summary Page

Field	Description
Acceptance Decision	Select from drop-down list: - Accept - Withdrawn - Pend - Cancel
Reason	Select from the drop-down list.
Price Effective Date (ILP)	Price Effective Date: DD/MM/YYYY Mandatory if ILP main product is accepted. Price Effective Date must be equal to Notification Date or plus one day.
Reason-Other	Only applicable when the reason is selected as **Others**. The system will prompt error message if “Reason” is **Others** and “Reason – Other” is blank when submit claim acceptance.

Field	Description
Comments History	The comments history text. The textbox in grey is not updatable at acceptance stage.
General Comments	In this area, you can input the new comments if necessary.
Submit	Click **Submit** after the acceptance decision is made.
Escalation	Click **Escalation** to escalate the claim case.
Back	Click **Back** to return to the Case Acceptance Entry page.
Exit	Click **Exit** to Claim Work List.

Table 7. Description of Fields on the Escalation Page

Field	Description
Case No.	The case number for escalation.
Case Status	The current case status.
Escalation Content	Escalation Content.
Escalation Type	Select option button: - Escalate to Claim Officer - Submit to Investigator
Escalation To	Select from the drop-down list, for example, LIFE. Enabled when Escalation or Submit to Investigator is selected.
Due Date	By default, system Date + 1 day.
Escalation Officer	By default, current claim user and read only.
Escalation Date	By default, system date and read only.
Comment	Free text comment.
Escalation History	Click **Escalation History** to view the escalation history if any. You can also withdraw an escalation if necessary

Table 8. Description of Field on the Document List Page

Field	Description
Required Documents	Required Documents.
Last Submission Date	Default Value = system date. Users can input the date when the documents have been accepted. Not allow to choose date later than system date.
Completeness	Default as **Y** in Required Document tab. Users can update.
Waive	Default as **N** in **Required Document** tab. Users can update.
Required Document	Display required document list configured in the system, claim user can select multiple documents and update the last submission date, completeness or not, waive or not.
Optional Documents	Optional Documents.
Last Submission Date	Default Value = system date. Users can input the date when the documents have been accepted. Not allow to select date later than system date.
Completeness	Default as **Y** in **Required Document** tab. Users can update.
Optional Document	Display optional document list configured in the system, claim user can select multiple documents and update the last submission date, completeness or not.
Additional Document	Additional Document.
Add	Click to add one additional document. Claim user can fill in additional document name, waive or not, last submission date, completeness or not for each additional document.
Delete	Claim user can delete added additional document.

Table 9. Description of Fields on the Medical Bill Entry Page

Field	Description
Medical Bill Type	Select for medical bill type: - Inpatient Medical Bill - Outpatient Medical Bill
Bill No.	The sequence number of this medical bill.
Bill Currency	The currency of the input bill.
Bill Date	The creation date of this medical bill.
Hospital Code	Select from dropdown which displays all the available hospitals.
The 3rd party SMM paid amount in Bill currency	The total amount SMM paid by other insurance or any other third party in bill currency.
Surgical Code	Happened surgery codes in this medical bill.
Bill Item List: system to display the available bill item configured in the system	Bill Item List: system to display the available bill item configured in the system.
Bill Item	Bill item name.
Start Date ~ End Date	Display when bill item type is Inpatient Start Date and time and End Date and time of Inpatient bill.
Admission Days	Display when bill item type is Inpatient. System auto calculate the admission days by the start date and end date of bill item. 24 hours will be counted as 1 whole day.
Bill Amount	Bill amount of each item.
Exclude Item	The amount of excluded item in bill currency of the bill item.
3rd Party Paid Amount	Amount of 3rd party paid in bill currency of the bill item.
3rd Party SMM Amount	It is auto-calculated based on Total 3rd Party SMM Paid Amount in Bill currency and Bill Amount

Field	Description
	Ratio. The format is as below: 1) Round ((total 3rd smm amount*item level's (bill amount - excluded amount)/ (total bill amount-total exclude amount), 2) The last bill item's amount is the remaining balance to avoid rounding issue.
Claimed Amount	- Bill Amount - Exclude Item - 3rd Party Paid Amount - 3rd Party SMM Amount
Save	To save the bill.
Back	To return to previous page.

Table 10. Description of Fields on the Query Letter page

Field	Description
Case Information	Case Information.
Life Assured Name	Default to display life assured name and read only.
Event Date	Default to display claim case event date and read only.
Claim Type	Default to display claim case claim type and read only.
Letter List	Letter List.
Document No.	The number and file name of the document. Generated by system and cannot be edited.
Document Name	Default as Query Letter.
Generate Date	The data when user clicks **Generate Letter** to generate the document. Generated by system and cannot be edited.
Generate By	The "User Name" of the user who printed the document. Generated by system and cannot be edited.

Field	Description
Status	Status of the letter. If user click **Generate Letter**, then the status of the letter will be "To be printed" and users can change to "Replied" by click **Update Status**.
Reply Date	The date when the letter is replied.
Update Status	Click this button to Update letter Status.
Generate Claim Query Letter	Generate Claim Query Letter.
Receiver	Select Policy Role or claim role of the addressee to whom the letter will be sent.
Receiver Name	Name of the receiver Role selected. When user selects **Other** in "Select addressee" dropdown list, system will leave the field blank and editable. Users must input the name of the addressee in this field.
Letter Content	-
Free Text	Free text area.
Preview	To preview letter generated by the system.
Generate Letter	Click to generate new letter, the new letter status will be "To be printed" after letter generation.
Back	Back to previous page.

Field Description for Evaluating a Case

Table 11. Description of Fields on the Evaluation Case Summary Page

Field	Description
Fraud/Red Flag	Fraud/Red Flag.
Fraud/Red Flag Indicator	Select for fraud/red flag indicator: - **Yes** - **No**

Field	Description
Reason for Fraud/Red Flag	Select for fraud/red flag: - Suspicious Claim - Frequent Claims - Suspicious Fraud/Fraud - Others
Reason for Fraud/Red Flag – Other	-
Save	Click to save the fraud/red flag.

Table 12. Description of Fields on the Underwriting Application Page

Field	Description
Case No.	Case Number.
Life Assured	Life Assured Name.
Policy No.	Policy number under this case.
PolicyHolder	PolicyHolder Name.
Inception Date	Policy's inception date.
Current Policy Status	Current policy status.
Due Date	Due Date: DD/MM/YYYY By default, due date = system date + 1 working day. Field is updatable, and the due date should be no earlier than the system date.
Claim Officer	The claim officer you have selected in Case Evaluation page.
Send Date	Default to the system date and non-updatable.
Comment	Fee Text.

Table 13. Description of Fields on the Installment Plan Detail Pages

Field	Description
Policy No.	Policy Number.

Field	Description
Installment Type	Select from the drop-down list: - TPD (Total and Permanent Disability) - AETPD (Accelerated Extended TPD) - ETPD (Extended TPD) - LTC (Long Term Care) - Paycare - Other
Net Benefit Amount	Net benefit amount, total payment amount in pay currency.
Start Date	The date when the initial installment payment is made.
Frequency	Dropdown as: - Yearly - Half Yearly - Quaterly - Monthly If installment type is TPD, default as Yearly. If Installment Type = TPD, Frequency will be Yearly
Amount Per Time	Amount Per Time.
Times Pay-Off	Times Pay-Off
Increase Inst By (%)	Increase Inst By (%) : 999.99 When <Type of Claim> = <TPD>, Required and editable for accelerated option on ETPD and AETPD only.
Sum of Installment	Total amount of all installments made.

Table 14. Description of Fields on the Add/Edit Installment Page

Field	Description
Date	The date on which this installment payment is made.

Field	Description
Installment Type	Select from the drop-down list: - TPD (Total and Permanent Disability) - AETPD (Accelerated Extended TPD) - ETPD (Extended TPD) - LTC (Long Term Care) - Paycare - Other
Principal	The principal to be made as an installment.
Amount	Auto-calculated by the system.
Review Date	When Pending indicator is Yes, this field is mandatory.
Pending	Select from the drop-down list: - **Yes** - **No**
Pending Remark	Editable if pending flag is **Yes**.

Appendix B: Rules

Summarize page

Rules for Registering a Case

This section tells the rules in registering a case.

When you click **Submit** to submit this case, the system checks the following:

If there is another case with the same event date, same life assured, and same type of claim, the system prompts a message “Similar case exists in the system! Do you want to save this case?” Click **OK** to ignore this warning message and create a new case, or click **Cancel** to cancel it.

Rules for Acceptance

This section tells the rules in manual acceptance.

1. In the Claim Acceptance Entry Page, when the user clicks next, the system will validate:

(1) If the Diagnosis Code is null upon claim acceptance entry submit, a warning message will be displayed to inform the user to input the Diagnosis Code for all claim types.

- For the diagnosis code, the system supports defining the effective date and end date to manage the diagnosis version.
- In the claim process, the system will compare the claim event date with the effective date and end date of the diagnosis code version. The corresponding diagnosis code version will be displayed.

2. In the Claim Acceptance Policy Decision page, if the user accepts a product:

(1) The system auto - retrieves the Freeze policy indicator and controls whether the freeze indicator can be overridden according to the configuration table. The configuration table is configured by claim type. The default configuration in the system is as follows:

ClaimType	TypeDesc	DescAbbr	LockPolicyIndi	EditLockPolicy
1	Death	DTH	Y	N
2	Total and Permanent Disability	TPD	N	Y
3	Terminal Illness	TIC	N	Y
4	Critical Illness	CIC	N	Y
7	Medical	MED	N	N
6	Her LA & Pregnancy Risk	MAT	N	N
10	Pay Care	PCC	N	N
8	Wavier	PWC	N	N
9	Long Term Care	LTC	N	N
5	Others	OTH	N	N
11	Accident	ACC	N	N

(2) The system displays the Notified Amount for chosen products. This amount is updatable.

(3) Policies or products that meet any of the following conditions cannot be accepted:

- The Policy is Frozen by(CS/CLM).
- This assured is different from the case's assured.
- This product has no liability mapped with the claim type.
- Case classification is not special and product status @ event date is terminated.
- Case classification is not special and product status @ event date is lapsed and event date >lapse date + grace period.
- Event date < Risk Commencement date or Event date > Coverage end date.
- Commencement date is blank or Coverage end date is blank.

3. When the user clicks **Submit** in the Case Acceptance Summary page:

(1) If the policy has outstanding premium, a warning message will be displayed, indicating that the policy has outstanding premium.

(2) If there is any one required - document record with Completeness IND <> Y and Waive IND <> N, the system prompts a warning as "There is an uncompleted required document. Please confirm to continue?"

(3) If the claim type is medical and medical - bill information is not input, the system prompts a warning as "No medical - bill information entered. Please confirm."

(4) If there is any query letter not replied, the system prompts an error as "Query letter is not replied."

(5) If the price effective is not the notification date or notification date + 1 working day, the system prompts an error as "Invalid Price Effective Date."

(6) If the claim type is Death or TPD and there is a Unit - link Policy accepted, the system auto - sells all units of the ILP policy upon submission of claim acceptance. The price is based on the price effective in the 5th point.

(7) If the user has accepted policies with different policy currencies, a warning message will be displayed.

(8) If the user has accepted policies with different policy owners/service agents, a warning message will be displayed.

- The policy owners are the policyholder, assignee, or trustee(s).

(9) Upon claim acceptance submit, the system will create a policy - party role for the claimant for all accepted policies in the claim case.

- There is no update of this claimant role after the claim has been accepted. Cancelling the claim case will not remove this role.
- For the same policy, there can be multiple claimant roles. For example, when a new claim case is submitted with a different claimant for the policy.
- If the claimant already exists as a policy - party role, a duplicate record will not be created for the same policy.
- The policy - party role will be shown in the Maintain Customer – Related Policy Section. The fields for the policy - party role in the maintain - customer - related policy section are not editable. This role will be updated automatically by claim transactions.

Rules for Evaluating a Case

This section tells the rules for evaluating a case.

1. Rules when you edit the case information:
    - Notification date should be no later than the system date.
    - Event date should be no later than the system date.
    - Appeal from case number should be entered when case classification is Appeal.
2. When you click **Compute** to calculate the evaluation amount and the payment amount:
    - Warning messages and warning message conditions can be configured to check the liability selection. The status message will display in liability evaluation section. The conditions contain: liability ID/name, main plan (of the selected liability), rider (of the selected liability), claim type.
    - If system detects that there is exclusion existing on the policy and the claim event date falls within the “Start Date” and “End Date” of the exclusion, the system will display warning messages.

- You can decide whether to pay the claimed amount or not. If not, you can update actual payment amount, and the payment should be no more than claimed amount.
- You can view the ILP information if the product is an investment - linked product and the information are for display only.
- TIV used for evaluation is calculated by following rule:
    - When the fund price of pending fund transaction is available, calculate TIV by pending units and the available price.

3. When saving the evaluation decision on the product, the system will display warning message if the evaluated product with “LAAR Indicator” is Yes and the total actual payment of evaluated product is equal or greater than inforce SA as at event date.
4. Before making disbursement plan, all policies under this case should have been evaluated.
5. When you click **Submit** on the Case Evaluation page, the system does the following validation check:
    - If there is a request to Underwriter, the underwriting request should be responded to.
    - If there is an escalation to investigator or claims officer, the escalation should be responded to.
    - If there is any query letter not replied to, system prompts the error “Query letter is not replied to.”
    - For each policy, Disbursement Amount should be equal to Allocated Disbursement Amount.
    - All policies under this case should have been evaluated.
    - If case information is updated after products have been evaluated, you have to reevaluate the case before submitting it for approval.
    - If Admission Price Effective Date is updated after ILP product has been evaluated, you should reevaluate all ILP products.

- If there is any one required document record with Completeness IND <> Y and Waive IND <> N, the system prompts a warning as “There is uncompleted required document. Please confirm to continue?”
- When saving the claim decision of CI claim case, the system will validation if there’s ongoing TPD claim of the same policy. Here ongoing TPD means there’s unpaid installment(s) remaining for TPD claim payment. If yes, display warning message.
- Warning messages and warning message conditions can be configured. The conditions contain: liability ID/name, main plan (main plan of any policy in the claim case, regardless if main plan is evaluated in the claim case), rider (rider of any policy in the claim case and has been evaluated in the claim case), claim type.

Rules for Making Disbursement Plan

1. On claim disbursement plan page, the system will default payee as following rules:
    - For death claim:
        - If there is no assignee or trustee or beneficiary nominee, default as policy holder for the 3rd party policy and no default payee for the 1st party policy.
        - If there is no assignee or trustee and only beneficiary nominee(s), default as nominees based on share percentage of each beneficiary.
        - If there is only assignee (absolute or collateral or official), default assignee as claim payee.
        - If there is trustee(s) with or without beneficiary nominees(s), default to trustee(s) without share percentage, the user can manually select one record for pay out.
    - For non - death claim:
        - If there is no assignee or trustee or beneficiary nominee, default as policy holder for both the 1st party policy and the 3rd party policy.

        - If there is no assignee or trustee and only beneficiary nominee(s), default as nominees based on share percentage of each beneficiary.
        - If there is only assignee (absolute or collateral or official), default assignee as claim payee.
        - If there is trustee(s) with or without beneficiary nominees(s), default to trustee(s) without share percentage, the user can manually select one record for pay out.
    - Note:
        - The 1st party policy means policy holder is the same person as life insured.
        - The 3rd party policy means policy holder is not the same person as life insured.
        - In business practice, policy will have:
            - Trustee can co-exist with beneficiary nominee.
            - Assignee cannot co-exist with beneficiary nominee.
            - Assignee and Trustee cannot co-exist.
2. On the Disbursement Plan Summary part
    - The Allocated Disbursement Amount field will be updated when disbursement plan is updated.
3. If Disbursement method is CPFB, “Total Refund Amount” will be set to “Disbursement Amount”.
4. When you click **Save** to submit the disbursement plan, the system does the following validation check:
    - All mandatory fields should be entered.
    - Benefit amount should not exceed balance amount.
    - If payment method is Transfer to Policy, then the policy number must exist in the system.
    - If payment method is Internal Transfer, policy status should not be terminated.

- If the payee's country of valid address and nationalities for overseas payment (payment method = Telegraphic Transfer), warning message will display.
- If payee's bankruptcy indicator is **Yes**, warning message will display. The payee's bankruptcy indicator should be **Yes**, if Bankruptcy status is **Yes** and no Bankruptcy discharge date at party level. Otherwise, payee's bankruptcy indicator will be **No**.
- If Disbursement method is CPFB
    - Co - mandatory Fields
        - If "MediSave Refund Amount" is not 0, "Payer CPF Account 1" and "Payer Refund Amount 1" are mandatory.
        - If "Payer CPF Account 1/2/3/4 (NRIC)" is entered, respective "Payer Refund Amount 1/2/3/4" is mandatory. Vice versa applies.
    - If "MediSave Refund Amount" + "MediShield Refund Amount" ≠ "Total Refund Amount, system will prompt error message upon clicking **Save** button.
    - If "MediSave Refund Amount" ≠ "Payer Refund Amount 1" + "Payer Refund Amount 2" + "Payer Refund Amount 3" + "Payer Refund Amount 4", system will prompt error message upon clicking **Save**.
    - Payer CPF Account 1/2/3/4 (NRIC) validation
        - Upon clicking **Save** button, system will trigger Singapore NRIC and FIN algorithm checking. Please refer to User Guide of Customer Service for details.
        - Please note the algorithm checking does not differentiate between Singapore NRIC and FIN and cannot check for ONLY Singapore NRIC or FIN specifically. Example: User enters a valid FIN, system will NOT prompt error.

Rules for Case Approval

This section tells the rules in manual approval.

1. When submitting the case approval, warning messages and warning message conditions can be configured. The conditions contain: liability ID/name, main plan (main plan of any policy in the claim case, regardless if main plan is evaluated in the claim case), rider (rider of any policy in the claim case and has been evaluated in the claim case), claim type.
2. When the claim officer picks up the case to operate claim approval, he can pick up the case whose total claim amount is within his authority limitation. The system will include the total premium waived amount of all evaluated products for checking claim limits at claim approval when the claim decision is NOT repudiate, cancel or withdrawn. The system will exclude the total premium waived amount for all evaluated products for checking claim limits at claim approval when the claim decision is Repudiate, cancel or withdrawn.
3. After the case is approved, policy and products will be updated as below:
    - Product Termination Rules:
        - The system updates the evaluated product status to Terminated.
        - If Product Inforce is No and Product is Main Plan, the system updates policy status to Terminated and updates all riders for policy to Terminated.
        - Termination Date equals Termination Effective Date.
    - Product Waiver Rules:
        - When the product waive indicator is Yes, then
            - The waiver start date will be updated to Waiver Effective Start Date.
            - Waiver end date will be updated to Waiver Effective End Date.
            - Sum assured waived equals 100% Sum Assured.
            - Premium status will be updated to Premium Waived.
    - Party update rules

        - If it is a death claim, party status of the life assured is updated to Death.
    - If it is Death or TPD claim and there is pending fund transactions generated for the ILP policy, the system settles all pending fund transaction after case is approved.

4. When the system generates claim payment record,
    - Payment records will be aggregated for the same policy number, payee ID, payment date, payment and currency.
5. If the evaluation user has sufficient authority to process approval task, after a case has been evaluated, we have rule to control whether to assign case to this evaluation user for approval or not.
6. Upon claim approval and decision = “Agree”, the system will create policy party roles for the claim payee(s) for all the policies in the disbursement plan.
    - For the same policy, there can be multiple claim payee roles. E.g., when a new claim case is processed with different payees for the policy.
    - If the claim payee already exists as a policy party role, duplicate records will not be created for the same policy.
    - If the claim payee is removed from the claim disbursement plan, the policy party role will not be deleted. (As claim payee role is maintained on policy level, this ensures we will not remove claim payee roles that have been created by past claims).
    - Policy party roles will be shown in Maintain Customer – Related Policy Section. The fields for policy party role in maintain customer related policy section are not editable. This role will be updated automatically by claim transaction.

Rules for Escalating a Case

This section tells the rules in case escalation.

When you withdraw escalation, Escalation with status of Responded or Withdrawn cannot be withdrawn.

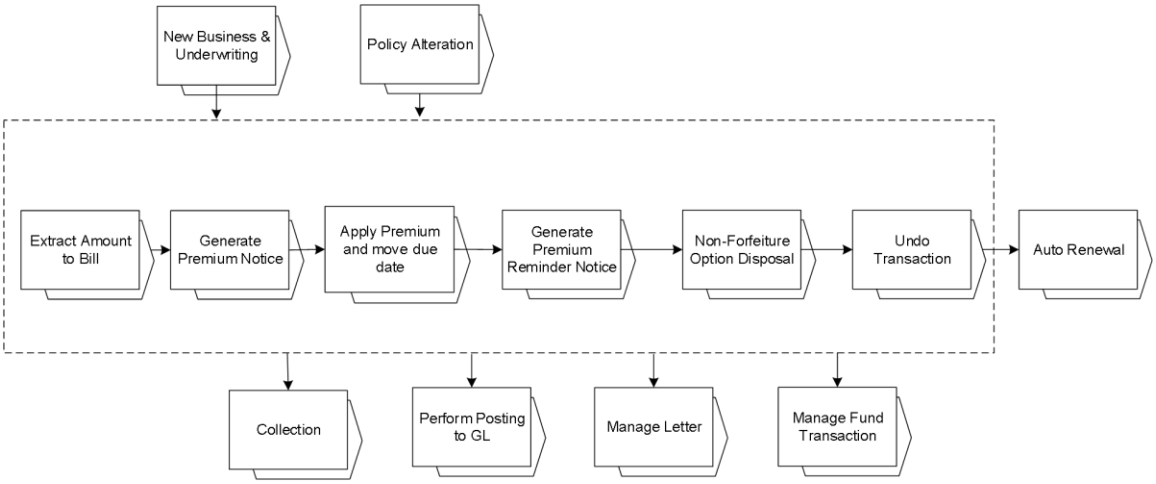

Gemini BCP User Guide

Summarize page

Billing Overview

Billing is to generate notice for customers to pay their premium in advance. The following diagram shows the workflow of Billing.

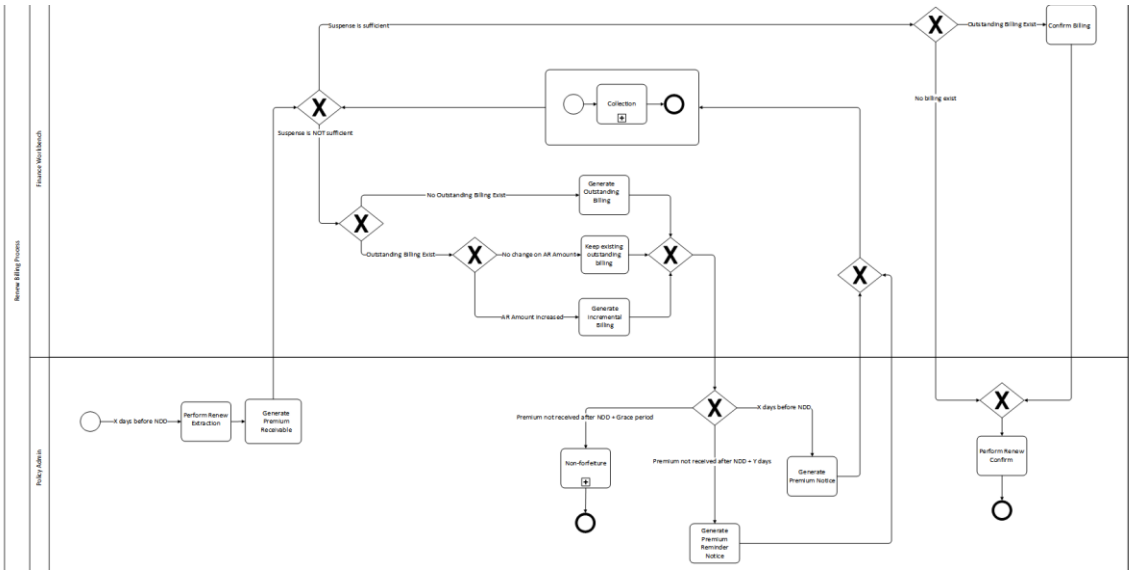

Figure 1. Workflow of Billing Overview

New Business Billing

The following diagram shows the workflow of New Business Billing.

Figure 2. workflow of New Business Billing

This section describes the overall workflow of New Business billing process.

Prerequisites

1. NB proposal is accepted or conditionally accepted.
2. General suspense is not sufficient for NB inforce.

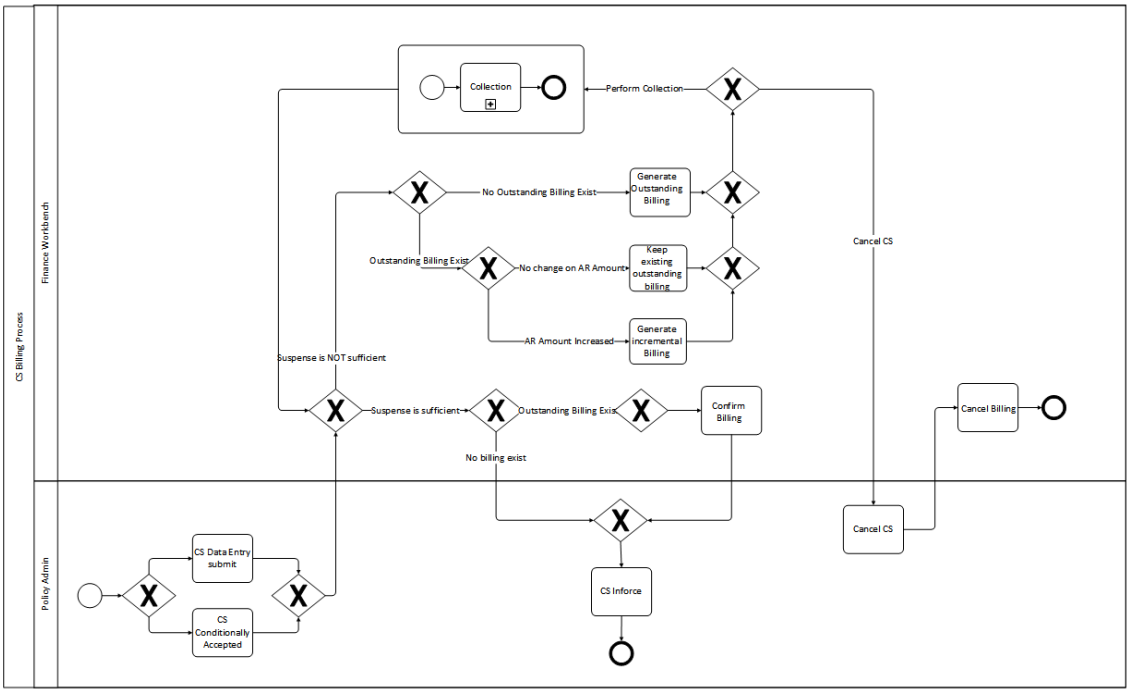

Process Steps

1. When NB proposal is accepted or conditionally accepted without sufficient suspense balance, the NB billing will be generated in outstanding state.
2. Once the collection comes in and general suspense balance is enough, the system will confirm the NB billing and perform NB Inforce.
3. Or if the NB proposal is withdrawal, the system will cancel the outstanding NB billing.

Customer Service Billing

The following diagram shows the workflow of CS Billing.

Figure 3. Workflow of CS Billing

This section describes the overall workflow of CS billing process.

Prerequisites

1. CS application is accepted or conditionally accepted needing money to inforce.

2. CS suspense plus General suspense is not sufficient for CS inforce.

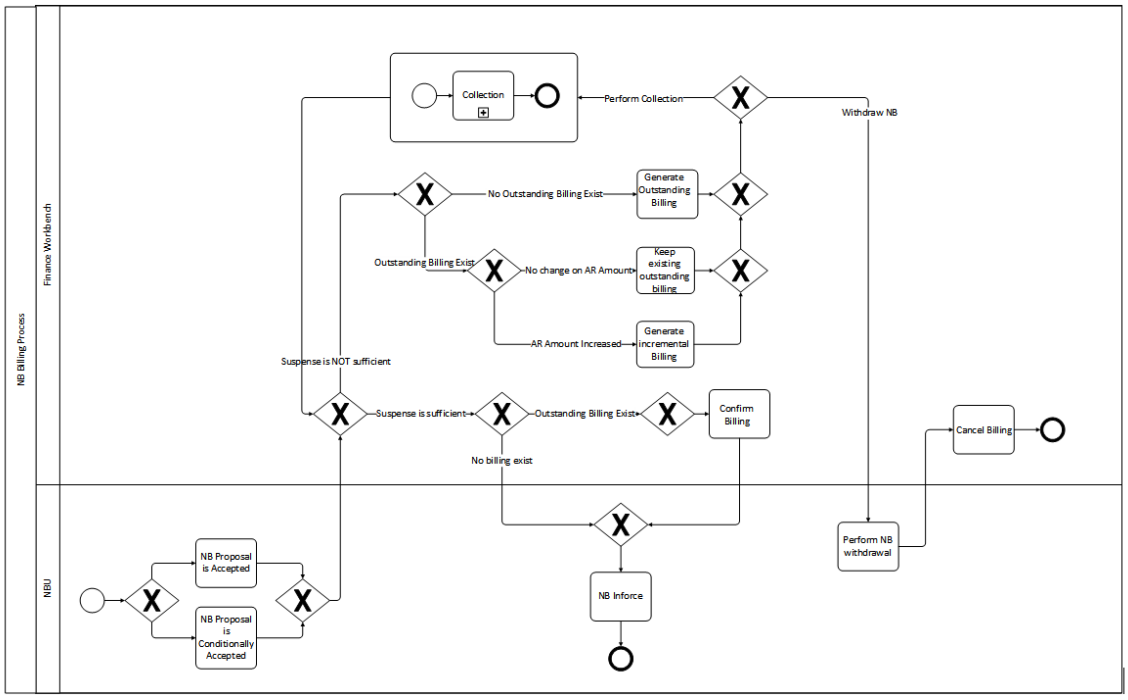

Process Steps

1. When CS application is accepted or conditionally accepted without sufficient suspense balance (CS suspense plus General suspense), the CS billing will be generated in outstanding state.
2. Once the collection comes in and suspense balance is enough, the system will confirm the CS billing and perform CS Inforce.
3. Or if the CS application is cancelled, the system will cancel the outstanding CS billing.

Renew Billing

The following diagram shows the workflow of renewing a policy.

Figure 4. Workflow of Renew Billing

This section describes the overall workflow of renew billing process.

Prerequisites

1. Renew Extraction batch has been performed and receivables have been generated.

2. Renew suspense plus General suspense plus APA is not sufficient for renew confirmation.

Process Steps

1. When renew extraction extracts outstanding premium and there is no sufficient suspense balance (Renew suspense plus General suspense plus APA), the renew billing will be generated in outstanding state.
2. The following table shows the batch jobs related to renew process:

Table 1 Renew Process related Batches

S/N	Process	Description	Reference
1	System extracts amount	At a specific time daily, the system extracts policies due for renewal.	Batch Renew Extraction
2	System generates notice	Generate premium notices to inform policyholders of renewal premium.	Generate Premium Notice
3	System applies premium	Apply premium and move due date after payment.	Generate Premium Notice
4	System generates reminder	Generate premium reminder notice if premium is unpaid.	Generate Reminder Notice
5	Non Forfeiture	Perform lapse / APL lapse / Raise APL if premium remains unpaid after grace period.	Non Forfeiture

Billing Query

This section describes how to query Billing Information.

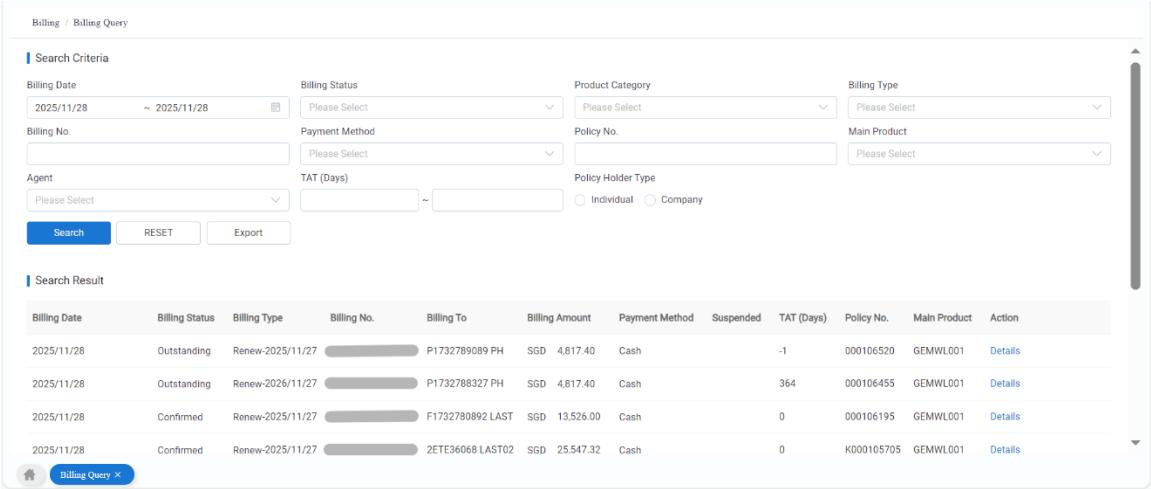

Prerequisites

1. NB / CS / Renew Billing has been generated.

Steps

1. From the main menu, select **Billing > Billing Query**.
   Step Result: The Billing Query page is displayed.
2. Set search criteria and click **Search**.
   Step Result: The matching result is displayed in the Search Result table.

Figure 5. Billing Query UI

3. Click **DETAILS** hyperlink and you can view the detail financial info of current policy and the account receivable transactions for renew billing.

Step Result: Policy Receivable and Payment Information are displayed.

note

The policy receivable information will be generated in confirmed state together with NB billing confirmation and NB inforce. The policy receivable information will be generated in confirmed state together with CS billing confirmation and CS inforce. While for renew, the policy receivable information will be generated in outstanding state during renew extraction batch and confirmed together with Renew billing confirmation.

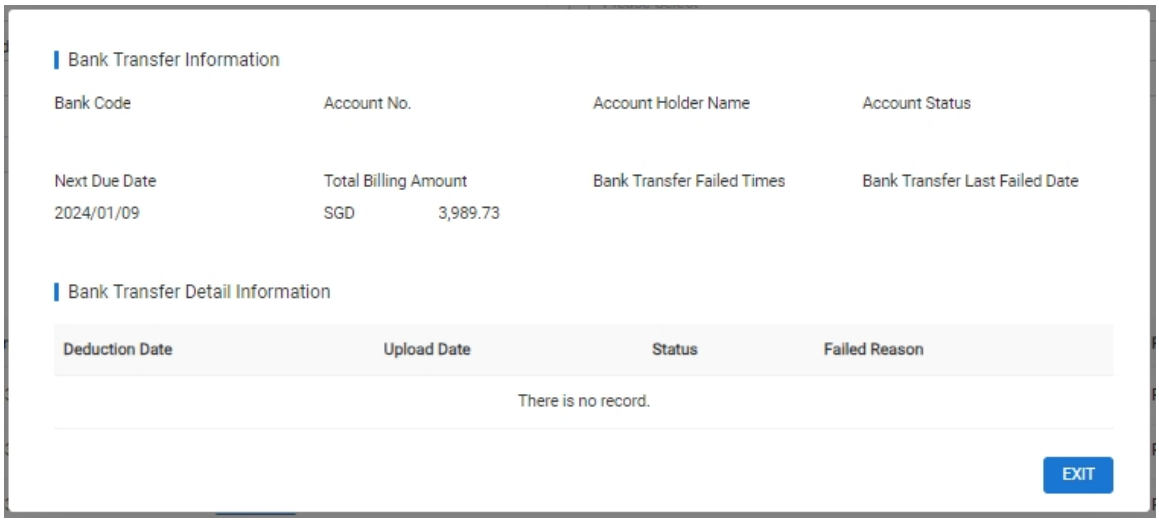

Figure 6. Billing Query - View Details Pop Up

4. Click **Credit Card** or **GIRO** hyperlink and you can view the detail bank transfer information of the selected billing.

Step Result: Bank transfer information pop up is displayed.

Figure 7. Billing Query - Bank Transfer Details Pop Up

Billing Configuration

This section describes the billing related configurations.

Premium Notice Configuration

Configuration table **PremiumNoticeDays** defines whether and when to generate the premium notice. The generation of premium notice can vary with parameters like sales channel, payment frequency and payment method.

Prerequisites

• Login-User with appropriate permission to modify configuration table.

Steps

1. From the main menu, select **Rule&Rating > Configuration Table**

Step Result: The Configuration table page is displayed.

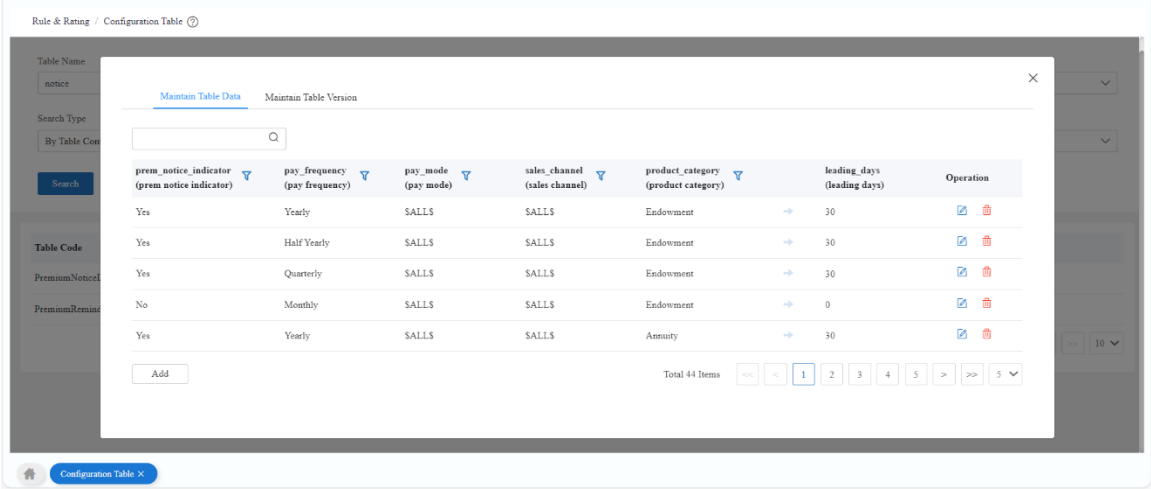

2. Set Table Name = PremiumNoticeDays and click **Search**.

Step Result: The matching result is displayed in the Search Result table.

3. Click **Edit** of the table and you will enter into the table edit mode.

Step Result: The PremiumNoticeDays table is displayed in edit mode.

Figure 8. Configuration Table - PremiumNoticeDays

3. a. Click **Add** to add a record. A new record is displayed at the bottom of the table.

● Or to select a record and click **Delete icon** to remove a record.

● Or to select a record and click **Edit icon** to modify a record.

b. Select the new record line, and enter the related parameters info. See the table below for details on each parameter.

c. Click **Save**.

4. The process ends.

Table 2 Field Description of Premium Notice Configuration

Parameter Name	**Parameter Description**
product_code	- All products in the system defined by the **ProductCode** field in the **TProductLife** data table. - ALL - *In the same condition, it takes ALL first. So for all conditions, ALL cannot be set in the table if there are other conditions.* - $NULL$ - $OTHER$ - *It can work like ALL if there is only $OTHER$ in the same condition. If there are too many conditions and records, to make the logic clearer, we can set ALL to $OTHER$.*
sales_channel	- All the sales channels in system defined by the **SalesChannelName** field in **TSalesChannel** data table.

Parameter Name	Parameter Description
	- ALL - $NULL$ - $OTHER$
prem_notice_indicator	- N/A - Yes - No - ALL - $NULL$ - $OTHER$
product_category	- All benefits types in System defined by the **benefit_type** field in the **t_benefit_type** table. - ALL - $NULL$ - $OTHER$
pay_frequency	- Not Relevant - Yearly - Half Yearly - Quarterly - Monthly - Single - Daily - ALL - $NULL$ - $OTHER$
pay_mode	- All payment methods in system defined by the ModeName field in the TPayMode data table. - ALL - $NULL$ - $OTHER$
leading_days	X days in advance before premium due date, to generate premium notice.

Premium Reminder Notice Configuration

Configuration table **PremiumReminderNoticeDays** defines whether, how many times reminder notices to trigger and when to generate each of the reminder notice. The generation of premium reminder notice can vary with parameters like sales channel, payment frequency and payment method.

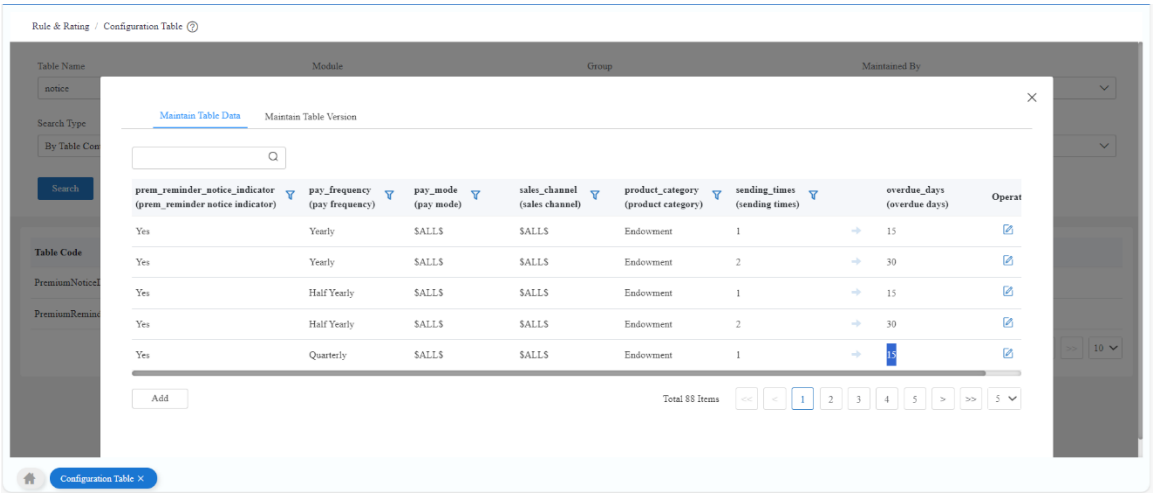

Prerequisite:

- Login-User with appropriate permission to modify configuration table.

Steps:

1. From the main menu, select **Rule&Rating > Configuration Table**.
   Step Result: The Configuration table page is displayed.
2. Set table name = PremiumReminderNoticeDays and click **Search**.
   Step Result: The matching result is displayed in the search result table.
3. Click **Edit** to enter edit mode.
   Step Result: The configuration table PremiumReminderNoticeDays is displayed in edit mode.

Figure 9. Configuration Table - PremiumReminderNoticeDays

3. a. Click **Add** to add a record. A new record is displayed at the bottom of the table.

● Or to select a record and click **Delete** to remove a record.

● Or to select a record and click **Edit** to modify a record.

b. Select the new record line, and enter the related parameters info. See the table below for details on each parameter.

c. Click **Save**.

4. The process ends.

Table 3 Field Description of Premium Reminder Notice Configuration

Parameter Name	**Parameter Description**
prem_reminder_notice_indicator	- N/A - Yes - No - ALL - $NULL$ - $OTHER$
pay_frequency	- Not Relevant - Yearly - Half Yearly - Quarterly - Monthly - Single - Daily - ALL - $NULL$ - $OTHER$
pay_mode	- All payment methods in system defined by the ModeName field in the TPayMode data table. - ALL - $NULL$ - $OTHER$
product_code	Product's benefit type. This field contains all benefits types in System defined by the benefit_type field in the t_benefit_type table.
sales_channel	- All the sales channel in system defined by the SalesChannelName field in TSalesChannel data table. - ALL

Parameter Name	Parameter Description
	- $NULL$ - $OTHER$
product_category	- All benefits types in System defined by the benefit_type field in the t_benefit_type table. - ALL - $NULL$ - $OTHER$
seq_id	Seq_id is used to differentiate the same parameter combinations with different overdue_days and sending_times.
overdue_days	Y days in post to prem due date, to generate perm notice.
sending_times	Enter how many times to trigger the reminder notice.

Appendix A: Field Descriptions

Billing Query

Table 4 Field Description of Billing Query Page - Search Criteria Section

Field Name	Description
Billing Date	Default system date.
Billing Status	Dropdown: Outstanding/Confirmed/Cancelled/Bank Transferring/Failed.
Product Category	Dropdown for product category.
Billing Type	Dropdown: NB/CS/Renew.
Billing No.	Free text for billing number.
Payment Method	Dropdown for payment method.
Policy No.	Free text for policy number.
Main Product	Dropdown for main product.

Field Name	Description
Agent	Dropdown for agent.
TAT (Days)	Range for TAT days.
Policy Holder Type	Radio: Individual/Company.
Policy Holder Name	Free text for individual name.
Policy Holder ID Type	Dropdown for ID type.
Policy Holder ID No.	Free text for ID number.
Company Name	Free text for company name.

Table 5 Field Description of Billing Query Page - Search Result Section

Field Name	Description
Billing Date	Display the billing generation date.
Billing Status	- Outstanding (NB in Accepted/Conditional Accept Status, Approved CS, Renew Extraction) - Confirmed (NB Inforce, CS Inforce, Renew Confirmed) - Cancelled (Undo CS, Undo Renew) - Bank Transferring - Bank Transfer Failed
Billing Type	Display the billing type: - NB - CS - Renew - Due Date
Billing No.	Display the Billing No.
Billing To	Display Policy Holder name.
Total Billing Amount	Display Total Billing Amount of the billing. For NB to display the total Inforce premium.

Field Name	Description
	For CS to display the total premium to make CS inforce. For Renew to display the total renew outstanding premium by due.
Payment Method	Display the payment method. If bank transfer process related payment method like credit card or Giro, it will show as hyperlink to view the bank transfer detail information.
Bank Transfer Suspend Indicator	Available for bank transfer process related payment method like credit card or Giro: - Yes - No
TAT (Days)	Display the days to indicate how long the billing has been outstanding since generation.
Policy No.	Display the Policy No.
Main Product	Display Main Product Code of the policy.
Action - **DETAILS**	Hyperlink to open the pop up to show the latest financial info and receivable fee transactions for renew billing.

Table 6 Field Description of Billing Query Page - View Detail Pop Up: Policy Financial Information

Field Name	Description
General Suspense	General Suspense Balance (Format: X,XXX.XX).
CS Suspense	CS Suspense Balance (Format: X,XXX.XX).
Renew Suspense	Renew Suspense Balance (Format: X,XXX.XX).
APA Balance	Advanced Paid Amount (Format: X,XXX.XX).

Table 7 Field Description of Billing Query Page - View Detail Pop Up: Policy Receivable and Payable Information

Field Name	Description
Transaction Date	Display the receivable generation date in Format: YYYY/MM/DD

Field Name	Description
Collection_Payment Date	Display the collection date of the money to offset the receivables in Format: YYYY/MM/DD
Service Type	Display the service type of the receivable transaction generated for: 3: Renewal Extraction Batch Run 32: In Force 108: Add Rider 110: Increase SA 119: Change Payment Frequency 120: Change Term 126: Change Birth Date or Gender 131: ILP Ad-hoc Single Premium Top-Up 144: ILP Increase Sum Assured 152: ILP Set or Change Recurring Top-Up 168: Change Smoker Status 170: Change Occupation Class 194: Reinstatement
Fee Description	Display the fee description of the receivable transaction.
Payment Frequency	Display the payment frequency of the policy.
Due Date	Display the due date of the current billing in Format: YYYY/MM/DD
Amount	Display the receivable amount of in Format: SGD X,XXX.XX
Fee Status	Display the fee status of the receivable transaction: - Waiting for Processing - Cancelled/Expired - Confirmed
Status Date	Display the status date of the receivable transaction in Format: YYYY/MM/DD

Table 8 Field Description of Billing Query Page - Bank Transfer Pop Up: Bank Transfer Information

Field Name	Description
Bank Code	Bank code and name.
Account No.	Account number.
Account Holder Name	Account holder name.
Account Status	Account status.
Next Due Date	Next due date (YYYY/MM/DD).
Total Billing Amount	Total amount (SGD X,XXX.XX).
Bank Transfer Failed Times	Number of failed attempts.
Bank Transfer Last Failed Date	Latest failure date (YYYY/MM/DD).

Table 9 Field Description of Billing Query Page - Bank Transfer Pop Up: Bank Transfer Detail Information

Field Name	Description
Deduction Date	Deduction date (YYYY/MM/DD).
Upload Date	Result upload date (YYYY/MM/DD).
Status	Success/Failure.
Failed Reason	Reason for failure.
Deduction Date	Display the deduction date in format: YYYY/MM/DD.

Collection Overview

Collections are the money received from customers for business transactions attached to certain policies through various collection methods. Usually the policyholder determines a policy collection method when proposing, but the insurer supports receiving collection by various methods. For example, the customer proposes policy through Direct Debit, but pay cash for renewal premium later.

The following diagram shows the workflow of collection.

Figure 10. The following diagram shows the workflow of collection.

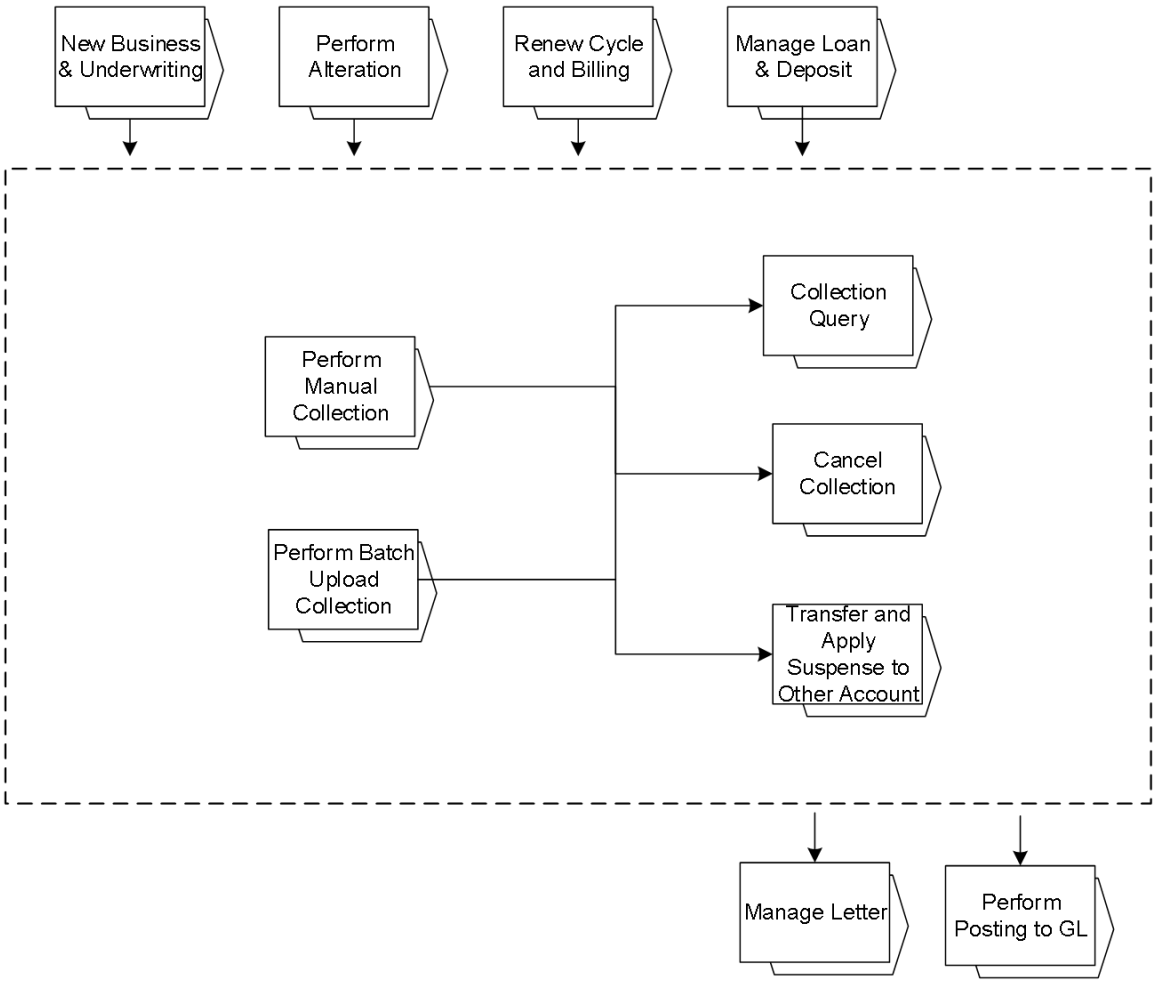

Table 10 Description of Collection Workflow

S/N	Description
1	Manual Collection allows you to collect premium online for Traditional, investment linked and A&H Policies for insurance company.
2	Batch upload collection allows you to upload the returned file of collection into the system, and manage the un-matched collection records.
3	Collection Query allows you to query the collection detail information.
4	Transfer and Apply Suspense into Other Account allows you to transfer money between different suspense accounts (General, Renewal and CS suspense) for insurance company. You can also transfer money from / to suspense accounts to / from Advance Premium Account (APA), Policy Loan, Automatic Premium Loan (APL).

S/N	Description
5	Cancel Collection allows you to cancel collections online for all types of collection methods (including dishonored cheque) for Traditional, investment linked and A&H Policies for insurance company.

Manual Collection

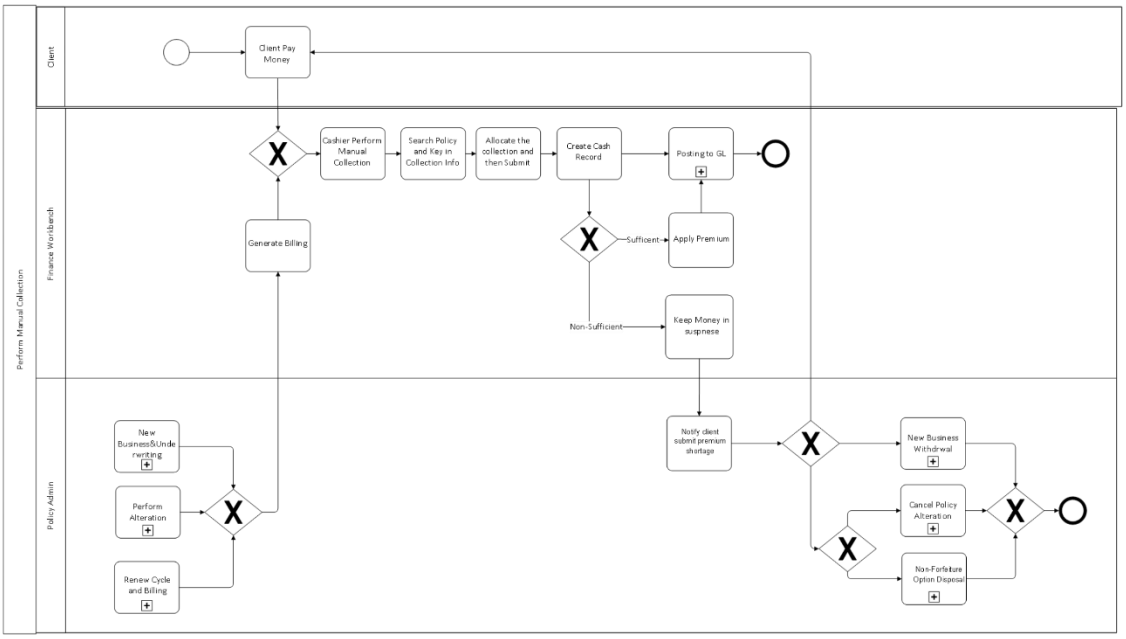

Manual Collection allows you to collect premium online for Traditional, investment linked and A&H Policies for insurance company.

Manual Collection allows for the update of collections via the counter or ad - hoc collection which needs to be made, for example, any non - cash entries such as amount from Deferred Benefit.

The collection methods available include cash, cheque, NETS, credit card, collecting bank, e-banking, DDA, etc. When you search for a specific policy to enter the collection details, the system will quote the default allocated amounts and populate the net amount payable. However, you can also overwrite the collection information as needed and submit the transaction. The system validates the payment and allocates the collection accordingly, for example, to premium, overdue premium, overdue interest, APL, policy loan, APA, suspense etc.

This chapter describes how to perform manual collection.

Figure 11 Workflow of Manual Collection

Procedure for Manual Collection

Prerequisite

- Proposal or Policy exists.

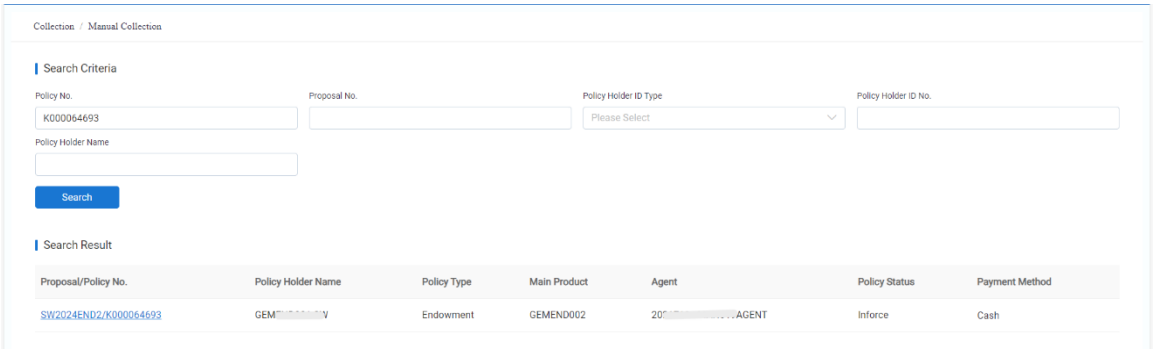

1. From the main menu, select **Collection > Manual Collection**.

Step Result: The Manual Collection page is displayed.

2. Set search criteria, and then click **Search**.

Step Result: The matching result is displayed in the Search Result table.

Figure 12 Manual Collection Page – Search Policy

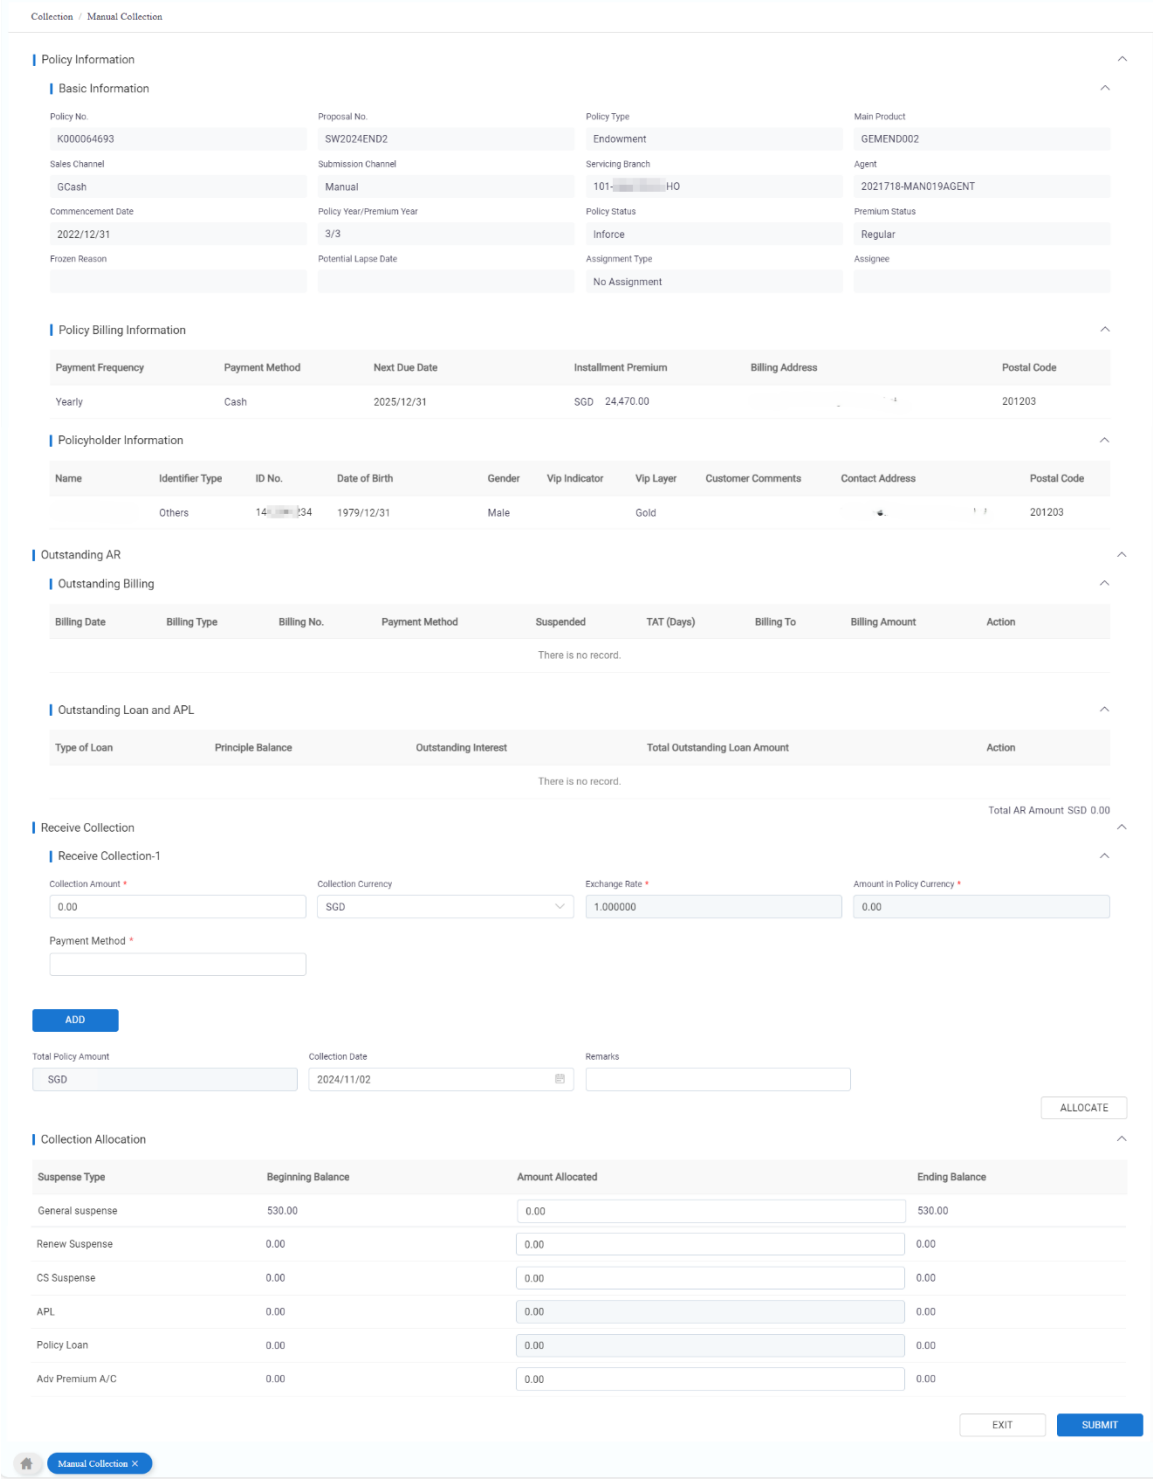

3. Click the hyperlink of the target policy.

Step Result: The manual collection operation page has four sections:

- Policy Information Section
    - Basic information to display the basic policy/proposal information.
    - The Policy Billing information to display the billing related information like payment frequency, payment method and next due date.
    - Policyholder Information to display the basic information of policyholder.
- Outstanding AR.
    - Outstanding Billing to list the NB or CS or Renew billings.
    - Outstanding Loan and APL to list the up - to - date loan info if any.

- Receive Collection to record one or multiple collections' input.
- Collection Allocation to allocate the collection per different premium purpose.

Figure 13 Manual Collection Page

4. On the Manual Collection – Receive Collection page, enter the collection details.
    - a. In the Receive Collection area, in the Amount text box, enter the collection amount.
    - b. Select a currency from the Collection Currency drop - down list and the exchange rate is automatically displayed in the FOREX Rate field.
    - c. In the Collection Method field, enter the collection method. The default Cash Bank Account and Collection Date are displayed. You can adjust the values if necessary.
    - d. Set Bank Code, Cheque No., Bank Account, Cheque Due Date, Collection Date, and Remarks as required.
    - e. Click Add if multiple collection records need to be recorded.
    - f. Repeat steps b through f to add other collection records.
5. Allocate collection.
    - a. Click **Allocate** and the total amount collected is displayed in the Amount Collected field.
    - b. Click **Submit**.
    - c. The system checks whether the collected premium is enough to make the policy in force, CS in force or renew confirm.
        - If yes, the allocation is successful and the policy is in force, the CS turns in force and the renew confirms;
        - If no, the collected money will be allocated to suspense.
6. The end.

Rules for Manual Collection

This section tells the rules in Manual Collection.

1. Collection currency can be different from policy currency. Multiple currency. Manual collection rules are as follows:
    - The collection amount the user entered is in actual collection currency. The system needs to convert the collection amount online by using the real - time transaction exchange rate.

- The system will check whether there is available transaction exchange rate with effective date the same as collection date. If yes, such rate record will be used to conduct conversion. If not, the system will retrieve the latest updated one up to the collection date and display a dialog box for users to confirm. Users can click **OK** to accept it and proceed with the collection.
    - Formula for currency conversion: Target currency's value = source currency's value * exchange rate.
    - Exchange rate can have 8 decimals in the system. Every fund exchange to policy currency for the purpose of getting fund value will be rounded to 2 decimals. Every collection/payment amount for fund will be rounded to 2 decimals. There is no rounding rule when converting to the base currency.
- If conversion occurred between two foreign currencies, then two conversions are required.
- If the corresponding exchange rate is unable to be found out, an error message will be displayed.

2. When you adjust the collection date:
    - Forward dating of the collection date is not allowed.
3. When you click **Allocate**:
    - **For New Business Collection**:
        - The system allocates the amount collected based on default collection allocation rules and displays the results.
            - If the collected amount is not applied to the Total Inforcing Premium, the default rule is that the amount will be placed under General Suspense.
    - **For CS/Renew/Ad - hoc Collection**:
        - The system will allocate the collection according to default rules, but you can change Amount Collected if necessary.
            - By default, money collected is allocated by the system in the following order. Each item must be collected fully before allocating to the next outstanding item. Existing

suspense balance in the respective suspense type will be considered when allocating. For example, current outstanding policy collection is $100, existing policy collection suspense is 20, the system will allocate only $80 to policy collection suspense and the surplus collected will be placed in the next item, that is, to APL if any outstanding APL, or if no APL then to renewal suspense, if no renewal premium is due, then to general suspense.

    - a) Policy Collection Suspense (for premium to inforce CS)
    - b) APL + APL Interest
    - c) Renewal Suspense (for payment of Premium)
    - d) General Suspense (for NB Inforce or CS Inforce or Renew confirm)
    - e) APA
    - f) Policy loan

- The premium is applied and the due date is moved immediately if the policy meets the leading days criteria.
- You can choose to allocate collected money to the relevant suspense. For details, refer to Transfer and Apply Suspense to Other Account.

Batch Upload Collection

This section tells you how to upload the returned file of collection into the system, and manage the un - matched collection records.

Figure 14 Workflow of Batch Upload Collection

Procedure for Batch Upload Collection

Uploading batch collection allows you to upload the returned file that may reside multiple collection records into the system, in situation that returned file is the only requirement. This happens when the insurer chooses to use the following 5 collection methods:

Bank Code	Collection Method
HSBC	AXS
HSBC	Internet BANKING
HSBC	Pay Now
HSBC	SAM
HSBC	Bill Payment
DBS	Internet BANKING
DBS	Bill Payment

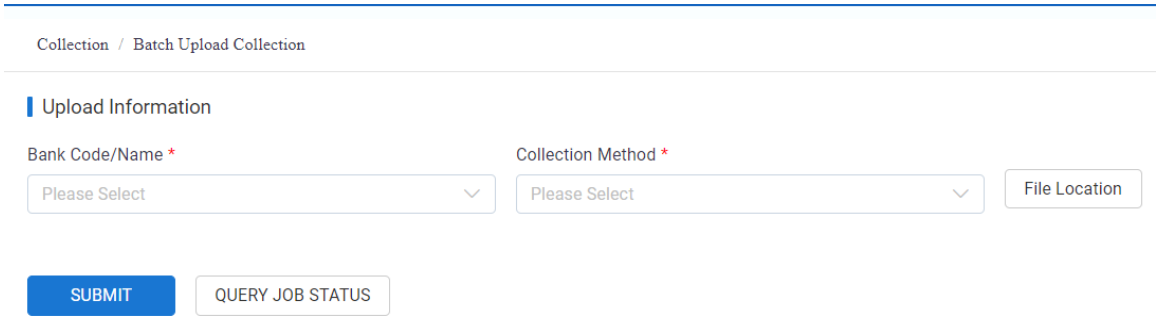

Prerequisite

- Policy status is Accepted or Inforced.
- Prepare the returned file of collection in a defined format.

1. From the main menu, select **Collection > Batch Upload Collection**.

Step Result: The Batch Upload Collection page is displayed.

Figure 15 Batch Upload Collection Page

2. Select the Bank Code from the dropdown list.
    - *NOTE:* The bank related information, such as the bank code, bank name, bank account no., can be configured and located in Finance > Bank > Maintain Bank Account.
3. Select the collection method from the dropdown list.
4. Click **File Location** to select one returned file of collection that you have prepared.
5. Click **Submit** to upload the file into the system.
6. Check if the triggered batch is executed successfully after uploading collection, do as follows:
    - a. In the Batch Upload Collection page, click **Query Job Status**. It displays the User Job Monitor page.
    - b. Input the Search Criteria and check the result. Below shows a sample.
    - c. The job status “Execute Success” indicates that this triggered batch is executed successfully. For the other job status, please consult the technical support engineers for more details.
7. The process ends.

Rules for Batch Upload Collection

1. After batch collection file is uploaded, system will check:
    - a. If policy No. exists, the system will generate collection record accordingly with relevant collection methods and continue with the business transaction (e.g., policy issue, renew confirmation, loan repayment, CS inforce, Premium Allocation, etc).

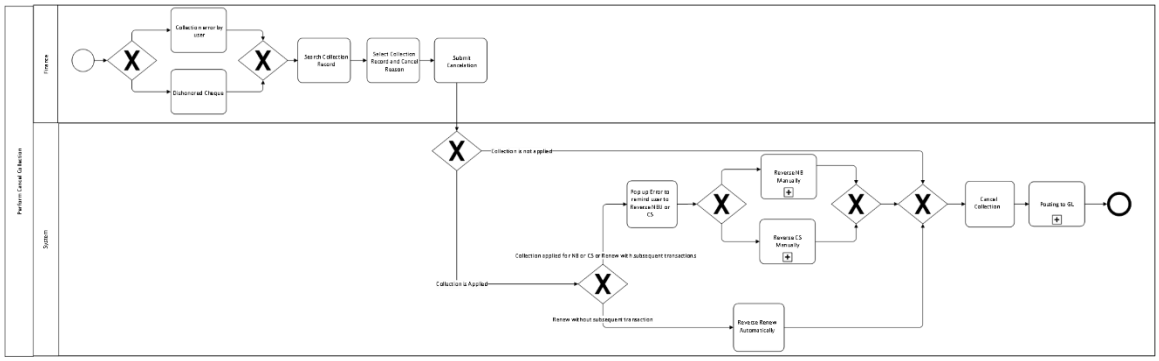

- b. If policy No. does not exist, the collection will be put into unmatched collection pool. When matched proposal comes after during below trigger points, the system will auto - map by proposal no or Policy No.:
    - NB Registration
    - Data Entry
    - NB Verification
    - E-submission

Cancel Collection

Cancel Collection allows you to cancel collections online for all types of collection methods (including dishonored cheque) for Traditional, ILP and A&H Policies for insurance company.

This section describes how to perform online cancellation of collections for all types of collection methods (including dishonored cheque).

Figure 16 Workflow of Cancel Collection

Procedure for Cancel Collection

Prerequisite

- The policy has collection records.

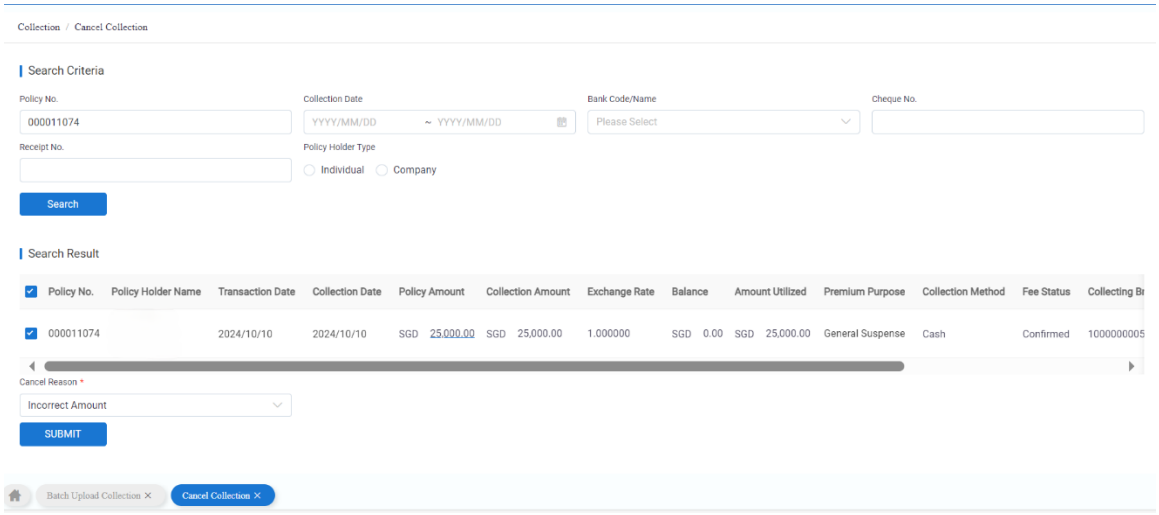

1. From the main menu, select **Collection > Cancel Collection**.

Step Result: The Cancel Collection Page is displayed.

2. Set the search criteria and then click **Search**.

Step Result: The qualified collection records are displayed in the search results section.

Figure 17 Cancel Collection Page

3. Click the checkbox next to the desired collection records. Specify the Cancel Reason (if applicable).
4. Click **Submit** to submit the cancellation request.
    - *Step Result: The confirmation message pop up for users to continue or cancel the operation. If click **Cancel**, the pop up will be closed and back to step 3. If Continue, go to step 5.*
5. The system cancels the collection records based on the rules and displays a message Cancel collection is successful.
6. The end.

Rules for Cancel Collection

This section tells the rules in cancel collection.

1. When you select the Cancel Reason, please note that:
    - If you select **Others** from the **Cancel Reason** drop - down list, there will be a blank space for you to write down the reason manually.
2. When you click **Submit**,
    - For non-applied collection, users can cancel it directly.

- For the cases that the collection is used to apply NB Inforce and needs to be cancelled, the user has to perform NB reversal manually and then cancel collection.
- For the cases that the collection is used to apply CS alteration and needs to be cancelled, the user has to perform CS reversal manually and then cancel collection.
- Once the collection is applied on renew, the system will evaluate if any subsequent transaction exists after the renew:
    - If there is subsequent transaction after renew confirmation: the user has to reverse the transactions including renew manually and then cancel collection applied for the renew.
    - If there is no subsequent transaction after renew confirmation: When the user cancels the collection, there is message pop up to ask the user's confirmation:
        - If the user quits the cancel collection operation, the collection will not be cancelled and the renew confirmation keeps inforce.
        - If the user insists the cancel collection operation, the system will automatically reverse the renew confirmation and then cancel the collection.

Transfer and Apply Suspense to Other Account

Transfer and Apply Suspense into Other Account allows you to transfer money between different suspense accounts (General, Renewal and CS suspense) for insurance company. You can also transfer money from / to suspense accounts to / from Advance Premium Account (APA), Policy Loan, Automatic Premium Loan (APL).

note

NB proposals do not have APA, Policy Loan, APL, therefore, NB proposals will not be handled under this function. This section describes how to transfer money between different suspense accounts.

Procedure for Transferring and Applying Suspense to Other Account

Prerequisite

- The policy has suspense balance.

- The policy has been inforce.

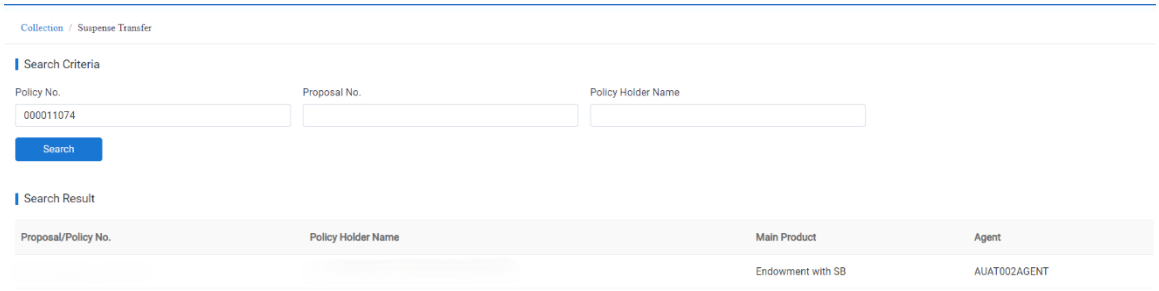

1. From the main menu, select **Collection > Transfer and Apply Suspense to Other Account**

Step Result: The Transfer and Apply Suspense to Other Account Page is displayed.

2. Set the search criteria and then click **Search**.

Step Result: The qualified policy records are displayed in the search results section.

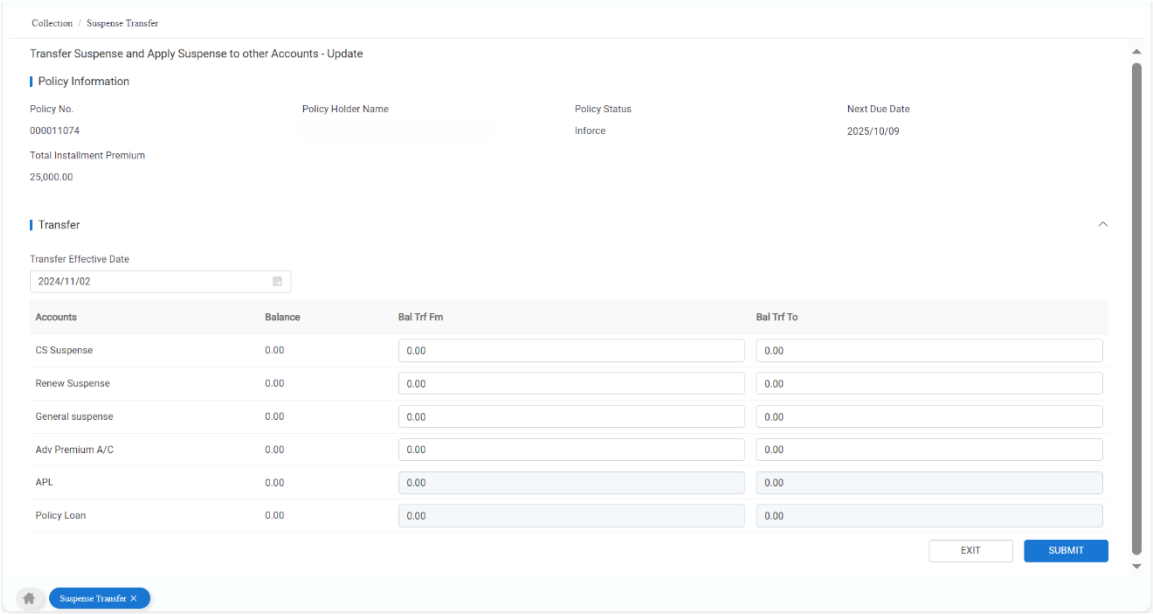

Figure 18 Transfer and Apply Suspense to Other Account Page – Search Policy

3. Click the hyperlink of the desired policy to load the details.

Step Result: Transfer Suspense and Apply Suspense to other Accounts – Update page is displayed. There are two areas in the page. One is Policy Information area where you can get the basic data of the policy. It is read - only. The other is Transfer area where you can perform the transfer.

Figure 19 Transfer and Apply Suspense to Other Account - Transfer Page

4. Enter the transfer details in Transfer section.
    - a. Pick a **Transfer Effective Date** from the Calendar Control. By default, it is the current system date.
    - b. Enter the amount to be transferred from the source account in **Bal Trf fm**.
    - c. Enter the amount to be transferred to the target account in Bal Trf to. The sum of **Bal Trf** to should be equal to **Bal Trf fm**.
5. Click **Submit** to submit the transfer request.
6. The end.

Rules for Transferring and Applying Suspense to Other Account

This section tells the rules in the process of transferring and applying suspense to other accounts.

1. When you transfer suspense to other accounts, please note the following rules:
    - Transfer of suspense will always be from one to many accounts and not many to many accounts.
    - If there is a lock on refund from General Suspense, then money cannot be moved from General Suspense to other types of suspense, for example, Policy Collection and Renewal Suspense.
    - If money has been transferred to Renewal Suspense, the system will attempt to move the due date online via the Renewal Batch job.
    - For display of interest bearing/charging account balances, the interest will be calculated up to the current system date and displayed as a total figure with the principal sum. This applies to accounts such as APA, APL and Policy Loan that attract interest.

Collection Query

This section describes how to query collection by different criteria.

Procedure for Collection Query

Prerequisite

- The policy has collection records.

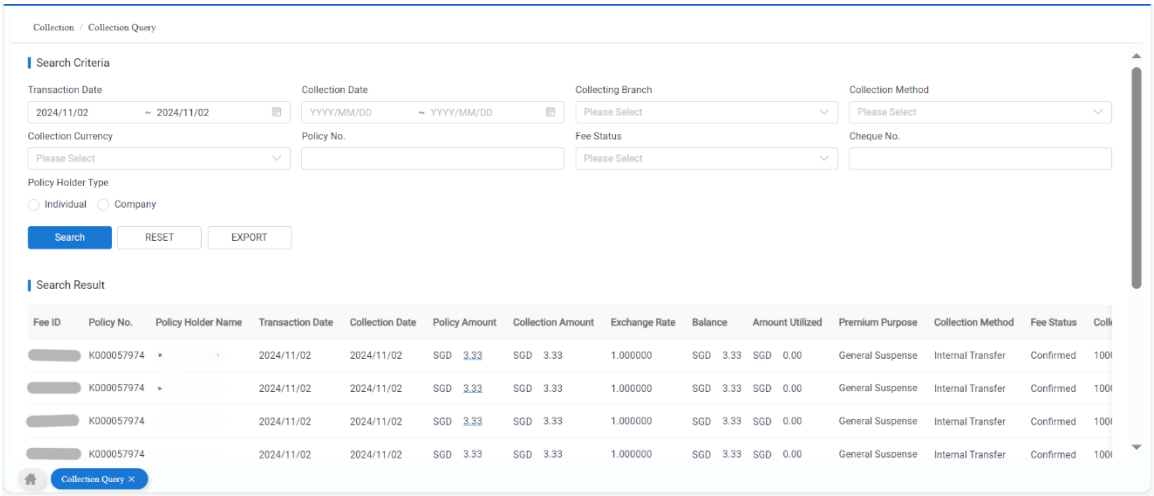

1. From the main menu, select **Collection > Collection Query**.

Step Result: The Collection Query Page is displayed.

2. Set the search criteria and then click **Search**.

Step Result: The qualified collection records are displayed in the search results section.

Payment Overview

Payment means the insurer refunds to the payee for business transactions, such as surrender, suspense balances, and medical billing, through various disbursement methods. Payees include policyholders, assignees, beneficiaries, clinics, banks, and the government, among others.

The following diagram shows the workflow of payment.

Figure 21 Workflow or Payment Overview

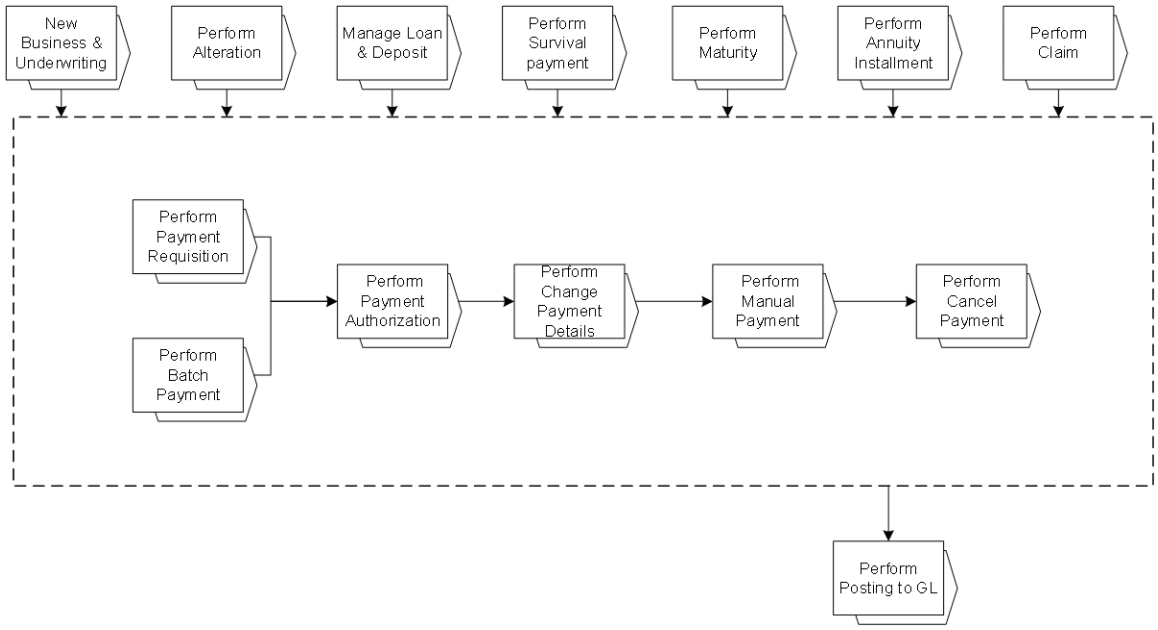

Table 26 Workflow of Payment Process

S/N	Description
1	Payment requisition is the refund request sent to the insurer when a payment record is generated. The payment can be refunded directly to the payee or transferred to another policy or proposal. For detail, refer to Payment Requisition.
2	For the transactions such as maturity, cash bonus, loan, refund of suspense, claim, annuity, the payment need to be performed regularly and automatically by system through batch jobs. For details, refer to Batch Payment.
3	Payment authorization is to decide whether to accept the payment or reject it. If authorized, the payment record is ready for paying out. If rejected, the payment record status will be changed to Cancelled. For details, refer to Payment Authorization.
4	The information of a payment such as the Disbursement Payee, Payment Method and Payment Bank can be changed if the payment is not paid. For details, refer to Change Payment Details.
5	If the payment record is authorized or the payment requisition is performed by a user with sufficient authority limit to bypass payment authorization, the

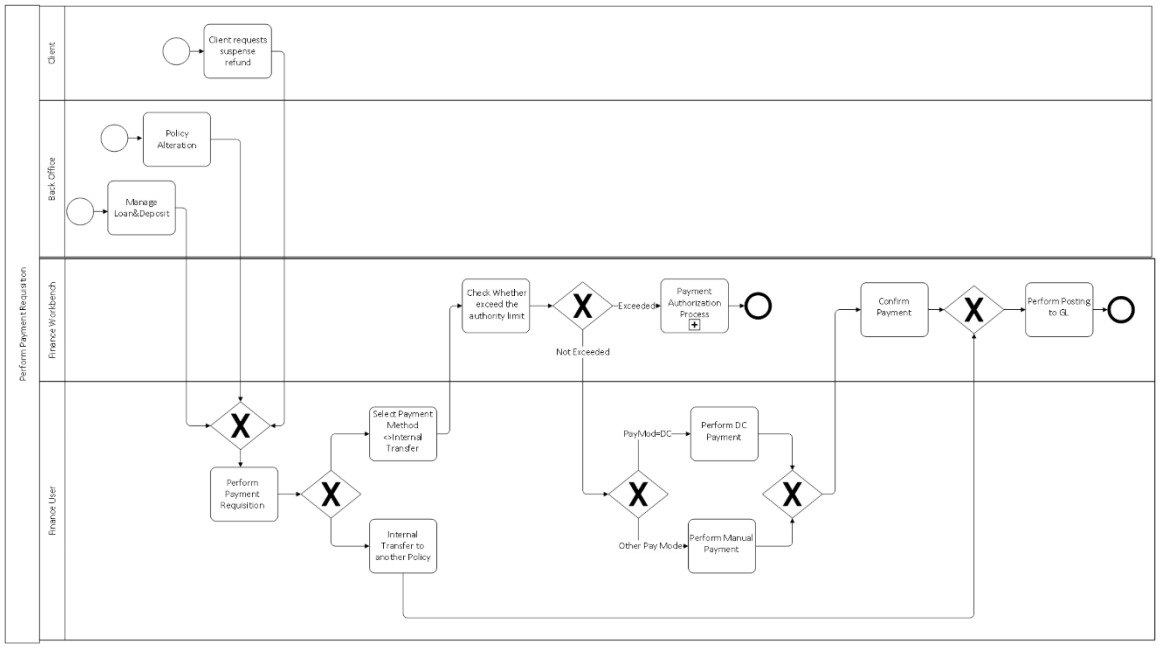

S/N	Description
	payment record is ready for Manual payment. For details, refer to Manual Payment.
6	After a payment has been authorized, for special reasons, such as spoilt cheque, payment details change, and void payment requisition, the client or bank may request to cancel the payment. For details, refer to Cancel Payment.

Payment Requisition

A payment requisition is a refund request submitted to the insurer when a payment record is generated. The payment record is generated when an upstream New Business (NB), Customer Service (CS), or payment item is processed. You can initiate policy payments, suspense refunds, and other account payments. The payment can be directly refunded to the payee or transferred to another policy or proposal. Once the payee confirms the payment requisition, the system routes the payment records to the payment authorization process. There are two types of payment requisitions: normal payment and medical payment. This chapter describes how to use the Finance Workbench to manage payment requisitions.

The following diagram shows the workflow of payment requisition.

Figure 22 Workflow of Payment Requisition

Payment Requisition Procedure

Prerequisite

- Upstream NB, CS and Claims payment items must have been processed and the relevant payment records are generated.

---

1. From the main menu, select **Payment > Payment Requisition**.

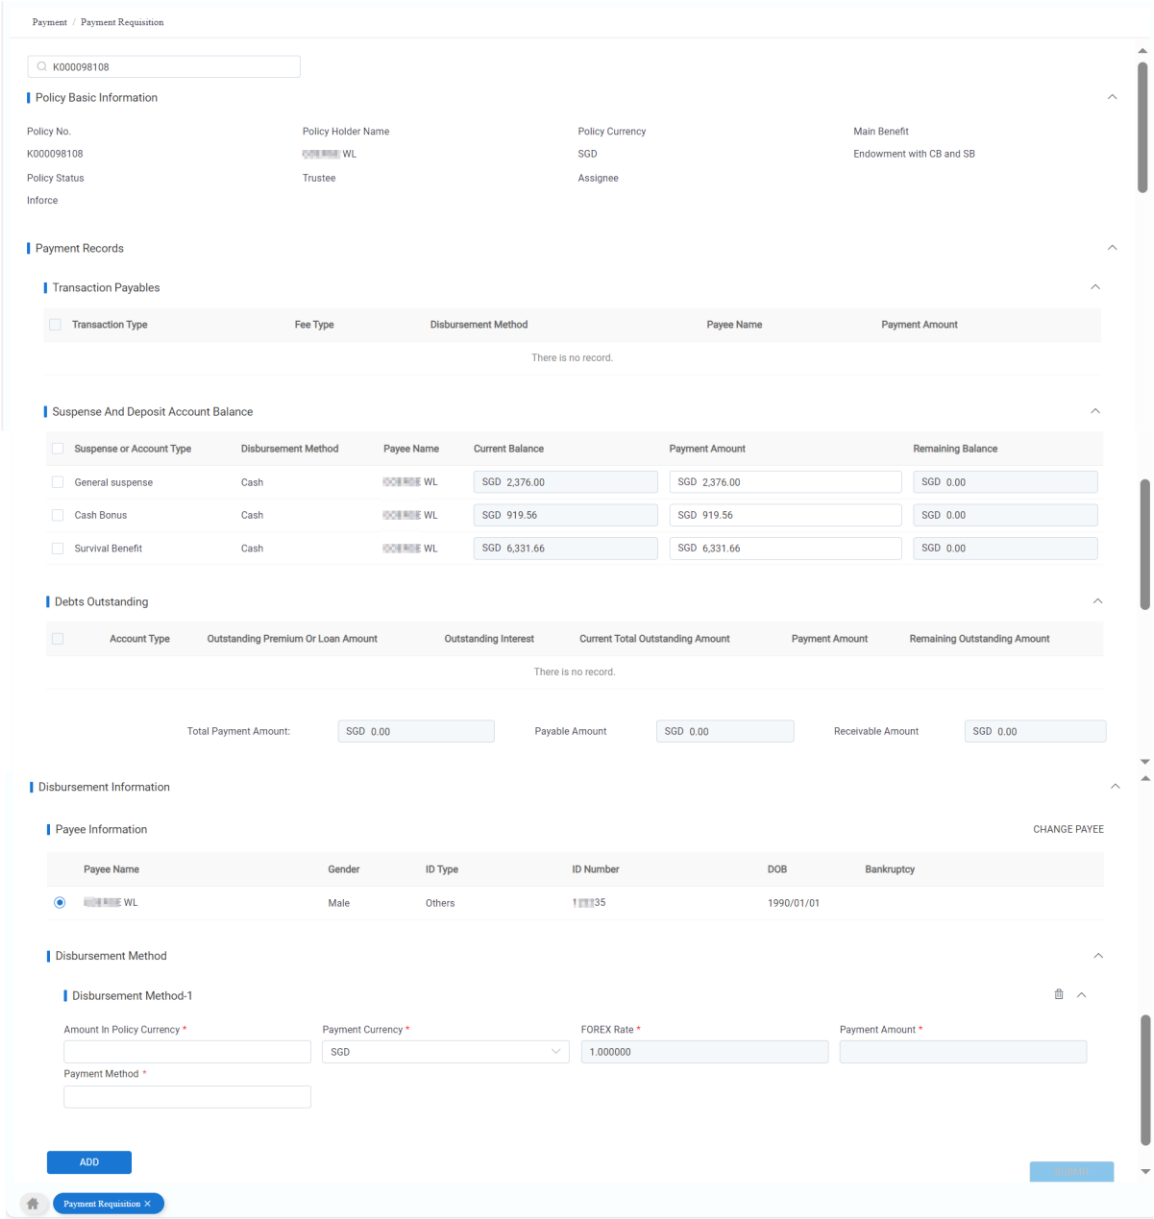

Step Result: The Payment Requisition page is displayed.

2. Set search criteria Policy No. or Proposal No., and then click **Search**.

Step Result: Policy related payment records are displayed.

NOTE: If no payee exists for the searched policy/proposal record, an error message will be displayed.

Figure 23 Payment Requisition Page

3. In **Payment Records** section, select the payment record.
4. In **Disbursement Information** section, Choose Payee, payment method and update the payment info. You can pay the payee directly or transfer the payment to another policy or proposal.

a. In the **Payee Information** area, you can either keep the default payee or change to another existing customer or new customer.

b. In the **Disbursement Method** area, enter the payment amount under **Amount in Policy Currency** field. Then, choose a payment method and currency. The exchange rate will be retrieved automatically.

NOTE:

- Click **Add**, and the payment details are displayed.
- To delete a payment, select the payment and then click **Delete**.
- You can select the payment method as internal transfer to transfer the payment to another policy or proposal.

c. Click **Submit**.

note

The system will check whether the payment exceeds the authority limit.

- If yes, go to Payment Authorization.
- If not, go to Manual Payment

5. The end.

Payment Requisition Rules

This section tells the rules in payment requisition.

1. When you select payment record to calculate the payment amount:
    - Transaction Payables records have the following payment types: Policy Payment, Surrender, Loan, Maturity, Annuity.
    - Suspense and Deposit Account Balance records have the following suspense types: Renewal Suspense, CS Suspense and General Suspense. Deposit Account types: APA, CB and SB. The balance is a consolidated based on the different suspense types.
    - If you select more than one payment record, these payment records must belong to the same disbursement payee.
    - The total payment amount of all the selected records must be greater than zero.
2. When you enter the target policy number to which the payment is transferred, while its policyholder is different from that of the source policy,

system will prompt message as a reminder. However, you can click **OK** to continue.

3. When you click **Submit** to submit the payment:
    - The total payment amount for the selected disbursement methods must equal the total payment amount displayed in the Policy Basic Information area.
    - For the payment transferred to another policy, the payment record will go to Posting to GL process.

Payment Requisition Limit Configuration

BCP Requisition for Payment is used to define the amount limit in payment requisition.

Prerequisite

N/A

---

1. From the main menu, select **Finance > Authority Configuration**.
2. Set search criteria Authority Type = “Payment Requisition Limit” and click **Search**.

Step Result: The following table lists the initial setting of BCP Requisition for Payment:

Table 27 Initial Setting for Payment Requisition Limit

Role Name	Max Amount
D_CSD_PAY_AUTH_L10	0.00
D_CSD_PAY_AUTH_L20	5,000.00
D_CSD_PAY_AUTH_L30	10,000.00
D_CSD_PAY_AUTH_L40	20,000.00
D_CSD_PAY_AUTH_L50	30,000.00
D_CSD_PAY_AUTH_L60	50,000.00

Role Name	Max Amount
D_CSD_PAY_AUTH_L70	75,000.00
D_CSD_PAY_AUTH_L80	100,000.00
D_CSD_PAY_AUTH_L90	125,000.00
D_CSD_PAY_AUTH_L100	150,000.00
D_CSD_PAY_AUTH_L110	200,000.00
D_CSD_PAY_AUTH_L120	250,000.00
D_CSD_PAY_AUTH_L130	500,000.00
D_CSD_PAY_AUTH_L140	99,999,999.00

3. If the existing setting does not meet the requirement, modify it, or add a new BCP Requisition for Payment role and then define the detailed authority of the role by entering the maximum authorization amount for each organization (branch).

note

The organization set in this role is user's organization instead of policy's organization.

4. Assign the role to user.
    - Assign limit permission to one or multiple roles through **URP > Role Management**.
    - Assign one or multiple roles to one user through **URP > User Management**.
5. Check the configuration result. Through the menu **Payment > Payment Requisition**, if the total payment amount is higher than the limit set for the user's organization, the F32 – Actual payment need senior staff's authorization.

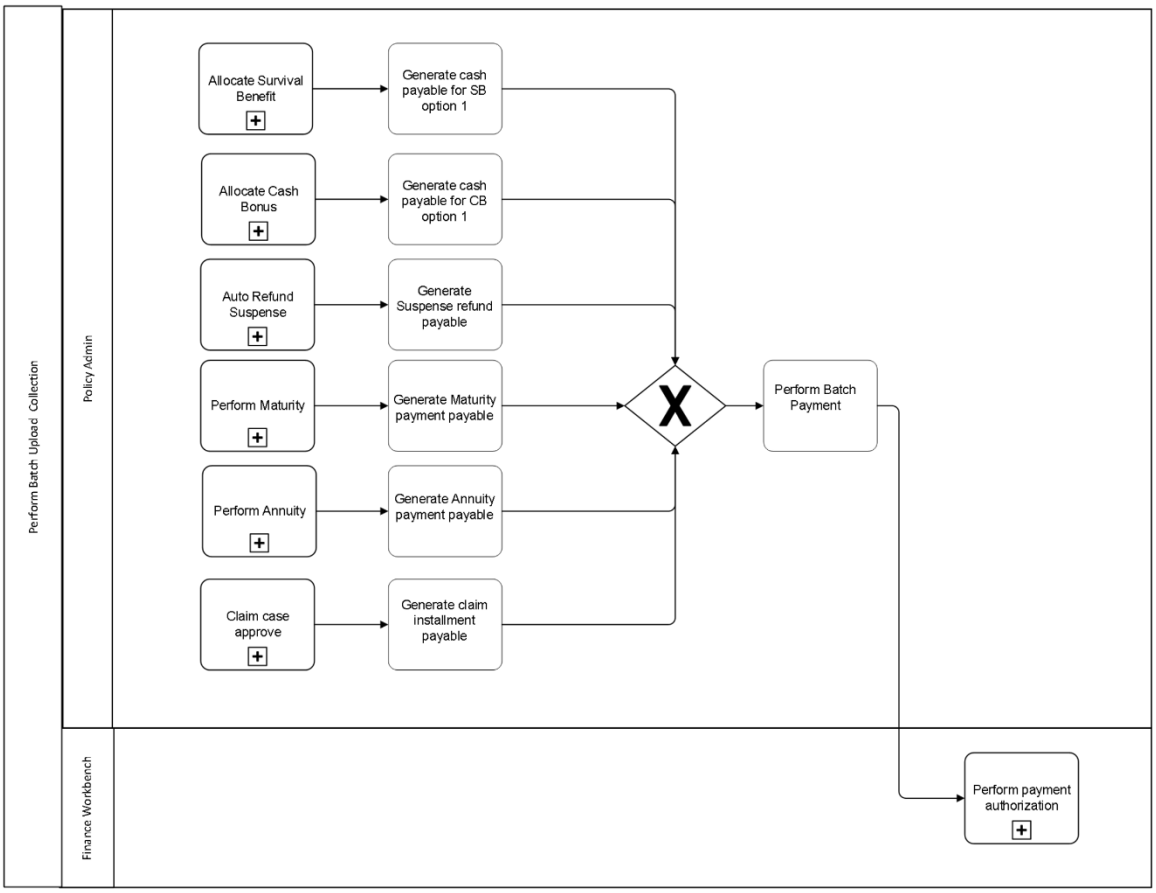

note After Payment Requisition submission, system validates the payout amount against payment requisition limits. No need to check the internal transfer amount. For example, if the payment amount is S$2,000, and payment is separated to payout S$1,500 and internal transfer S$500 to another policy, system only needs to validate S$1,500 against payment requisition limits. a. If payout amount > payment

requisition limit of current user, fee status will be Temporary Fee Status after Payment Requisition submission and the payment record needs further Payment Authorization before pay out; b. If payout amount <= payment requisition limit of current user, fee status will be Waiting for Processing after Payment Requisition submission and the payment record will be processed for pay out.

Batch Payment

For the transactions such as maturity, cash bonus, loan, auto refund of suspense, claim, annuity, the payment need to be performed regularly and automatically by system through batch jobs. This kind of payment is called batch payment. The system extracts policies that fulfill the extraction criteria, creates batch payment records, then transferred to payment authorization process.

Figure 24 Workflow of Batch Payment

Prerequisite

- Batch payment process, based on Customer Service rules, should have been completed.

- Payment records with Fee Type 32 should have been generated in Temporary fee status to indicate authorization is required, with the payee details and payment date.
- Only Fee Type 32, Fee Status 0 (Waiting for Processing) is eligible for paying out.
- Payment Date can be post based on the eligibility at the policy level.

---

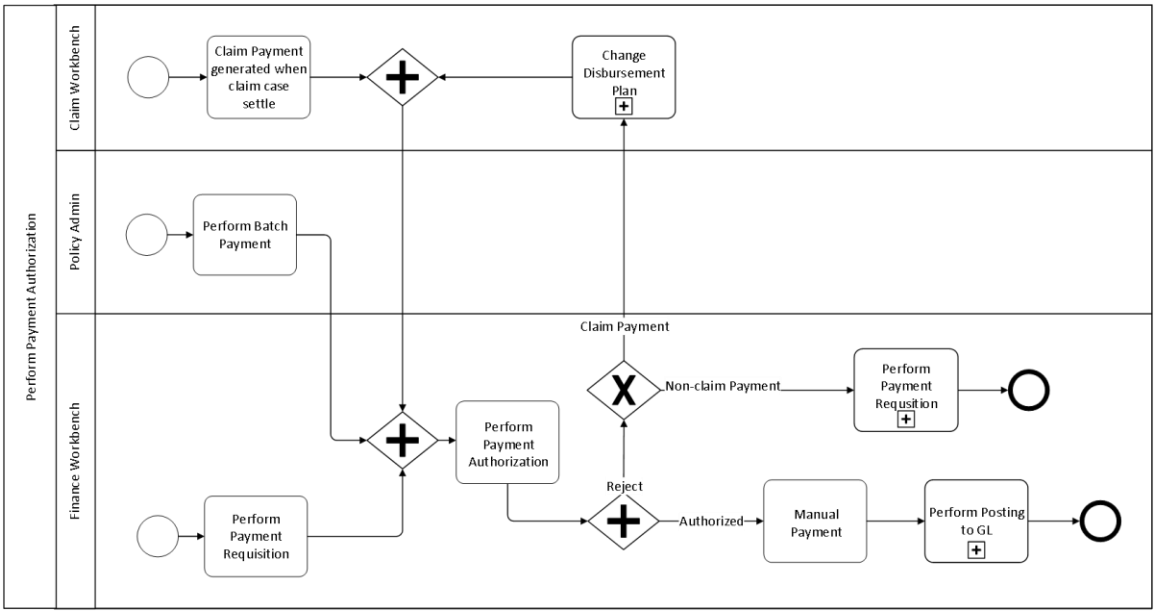

1. System extracts a list of policies for which batch payments need to be made. For refund of suspense automatically, refer below table for details.
2. System updates the CB/SB account balance and payment information for payments to be made.
3. The end.

Payment Authorization

Payment authorization is to decide whether to accept the payment or reject it. If authorized, the payment record is ready for manual payment. If rejected, the payment record status will be changed to Cancelled. Two types of payment records should undergo the payment authorization process. The payment records that exceed the authority limit in the Payment Requisition process and all batch payment records. For claim payment, it is configurable to bypass payment authorization or not.

The following diagram shows the workflow of payment authorization.

Figure 25 Workflow of Payment Authorization

Payment Authorization Procedure

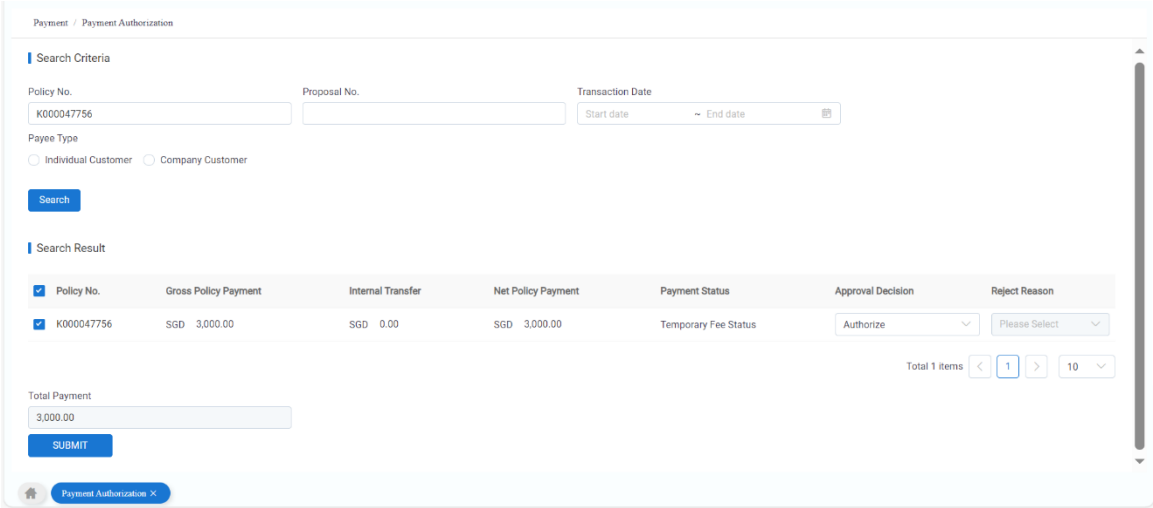

Prerequisite

- Payment has been generated in waiting for authorization (Temporary Fee Status) state.

---

1. From the main menu, select **Payment > Payment Authorization**.
   Step Result: The Payment Authorization page is displayed.
2. Set search criteria and then click **Search**.
   Step Result: The matched payment records are displayed.

Figure 26 Payment Authorization Page

3. Select the payment records to be authorized or rejected. a. Set the Approval Decision as **Authorize or Reject**. If Reject, select a Reject Reason.
   b. Click **Submit**. Then the system authorizes or cancels the payment record per approval decision.
   c. A message box is displayed, indicating the authorization is successful.
4. The End.

Payment Authorization Rules

This section tells the rules in payment authorization.

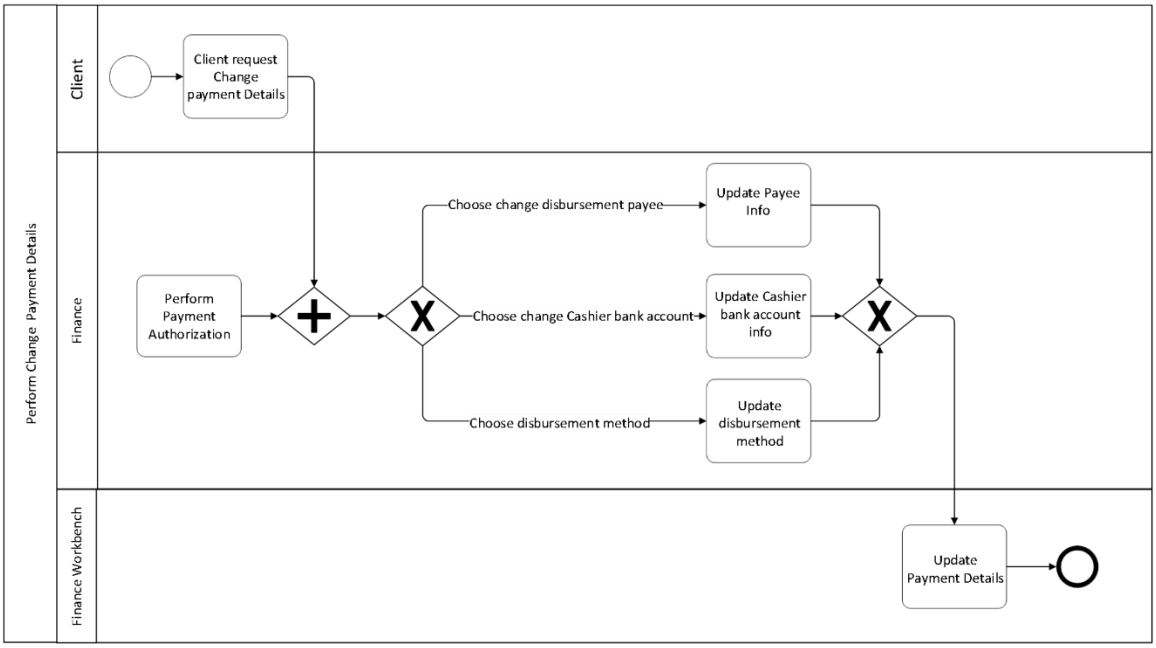

1. When the payment amount is greater than your authorization limit, you can only view but cannot authorize or reject the records.
2. When the payment is authorized successfully, the authorization information is saved and the system checks the disbursement method. See **Manual Payment** for details.

Change Payment Details

You can change the information of a payment such as the Disbursement Payee, Payment Method and Payment Bank if the payment is not paid.

The following diagram shows the workflow of how to change the payment detailed information.

Figure 27 Workflow of Change Payment Details

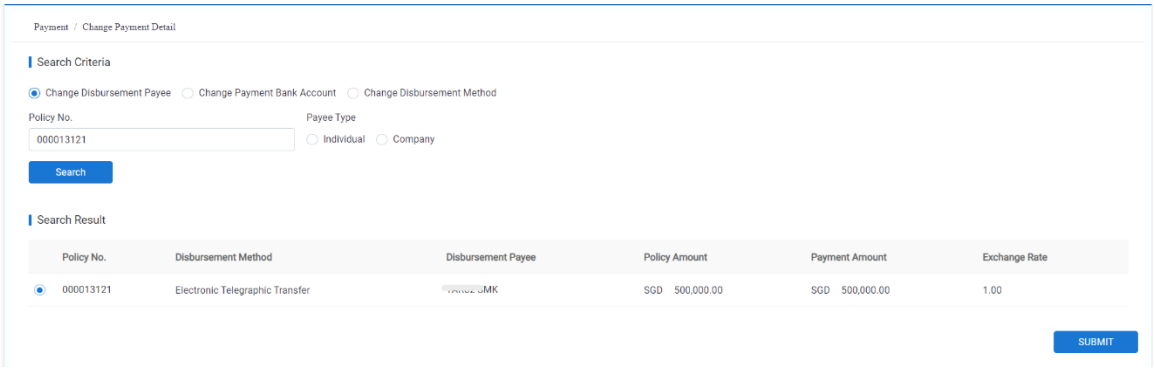

Prerequisite

- Payment has been generated or authorized.

---

1. From the main menu, select **Payment > Change Payment Details**.
   Step Result: The Change Payment Details page is displayed.

Figure 28 Change Payment Details

2. Select a change type and set search criteria, then click **Search**.
   Step Result: The matching result is displayed in the Search Result table.
3. Change and update the payment information.

a. Select a payment record under the **Search Results** area and then click **Policy No** hyperlink.

b. If to change the bank account, choose a new bank account from the **Bank Account No. drop-down** list and then click **Submit**.
c. If to change payment method, choose a new Disbursement Method from the **Disbursement Method drop-down** list, fill in additional information and then click **Submit**.
d. If to change the disbursement payee, Click **Change Payee** to search an existing customer or create a new customer, and then click **Submit**.

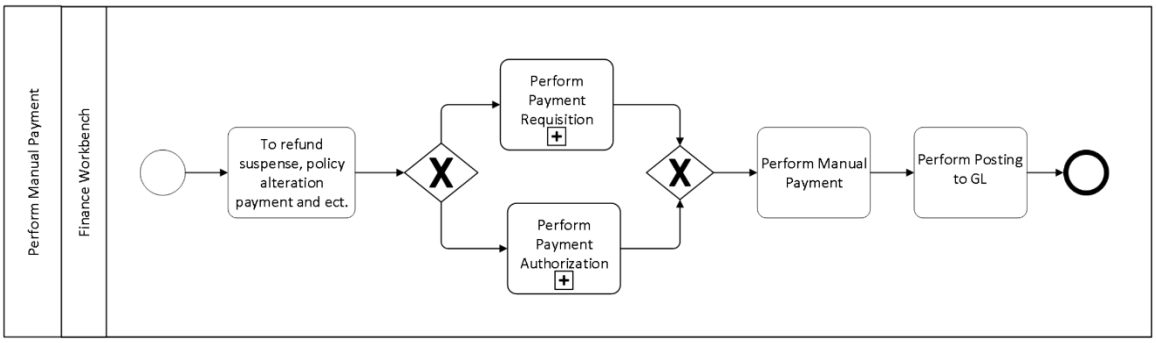

4. System update the corresponding information of a payment.
5. The end.

Manual Payment

If the payment is approved or the payment request is completed by a user with enough authority to bypass payment approval, the payment record is ready to be paid manually. This section explains how to make a payment manually.

The following diagram shows the workflow of manual payment.

Figure 29 Workflow of Manual Payment

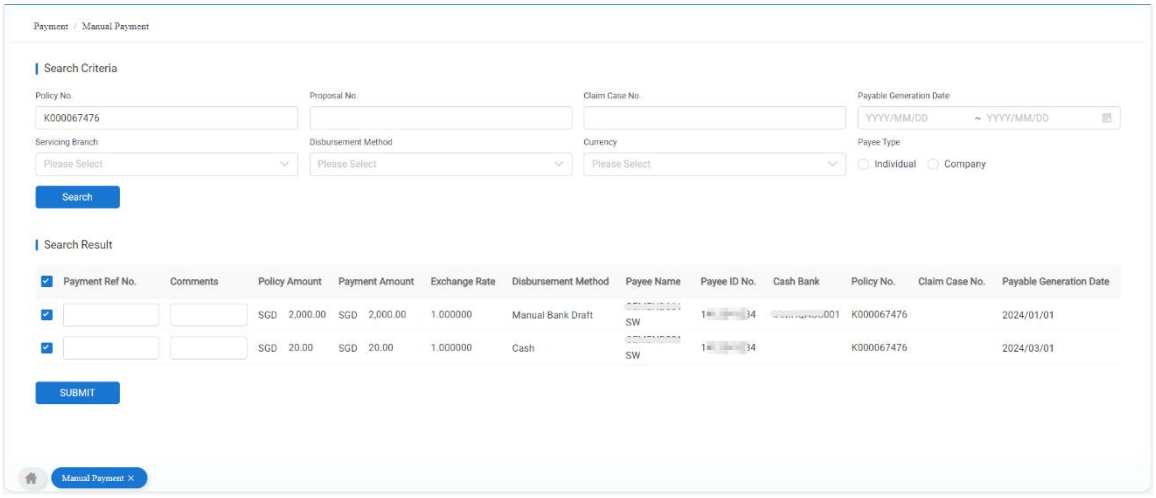

Prerequisite

- The payment requisition is performed by a user with sufficient authority limit to bypass payment authorization.
- The payment record is authorized.

---

1. From the main menu, select **Payment > Manual Payment**.
   Step Result: The Manual Payment page is displayed.
2. Set search criteria, then click **Search**.
   Step Result: The matching result is displayed in the Search Result table.

Figure 30 Manual Payment Page

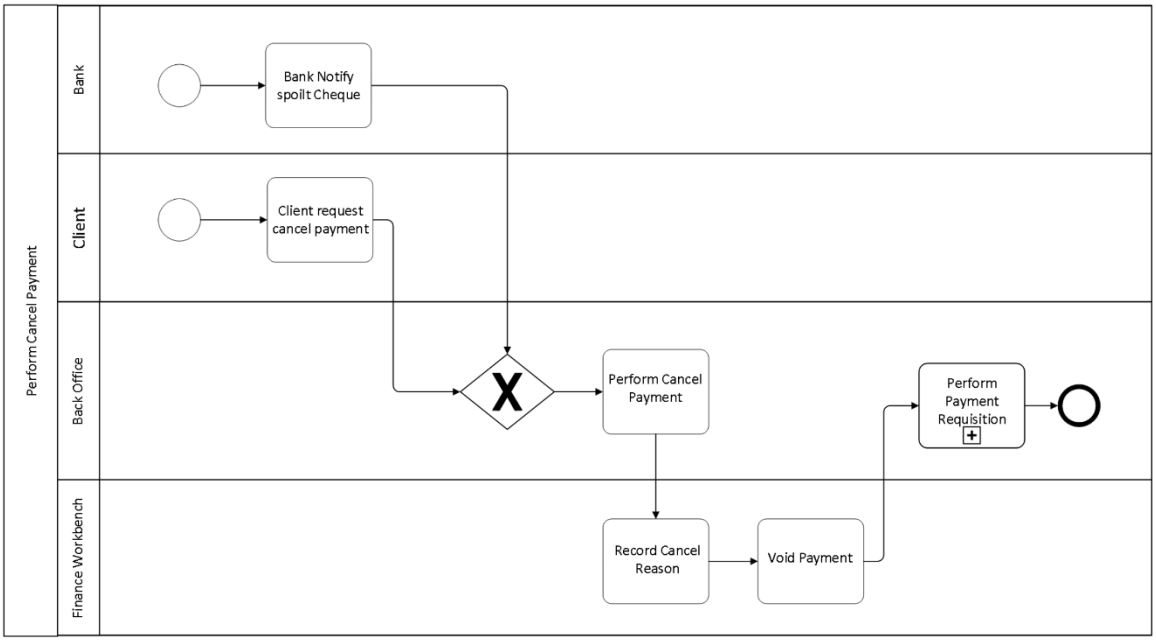

3. Select the payment record and submit the payment.
   a. In the Search Result area, select the payment record, and then enter the payment reference number and comment.
   b. Click **Submit**.
4. Perform posting to GL. For details, refer to **Perform Posting to GL**.
5. The end.

Cancel Payment

If a payment has been approved, there are some situations where the client or bank can cancel it. These situations include a bounced check, changed payment details, or a void payment request. This section explains how to cancel a payment using Finance workbench.

The following diagram shows the workflow of canceling payment.

Figure 31 Workflow of Cancel Payment

Prerequisite

- The payment records to be cancelled already exist in the system.

---

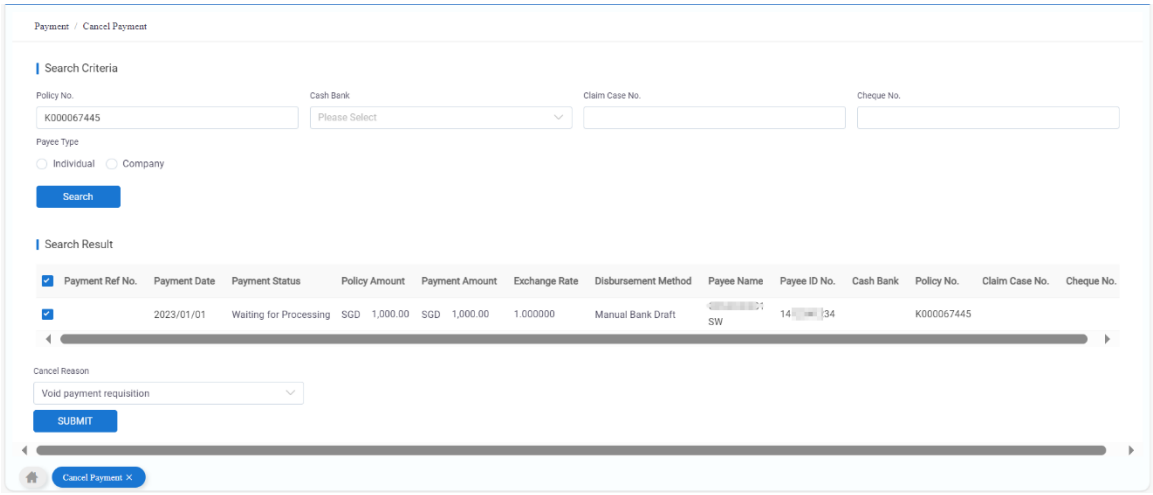

1. From the main menu, select **Payment > Cancel Payment**.

Step Result: The Cancel Payment page is displayed.

2. Set search criteria, then click **Search**.

Step Result: The matching result is displayed in the Search Result table.

Figure 32 Cancel Payment Page

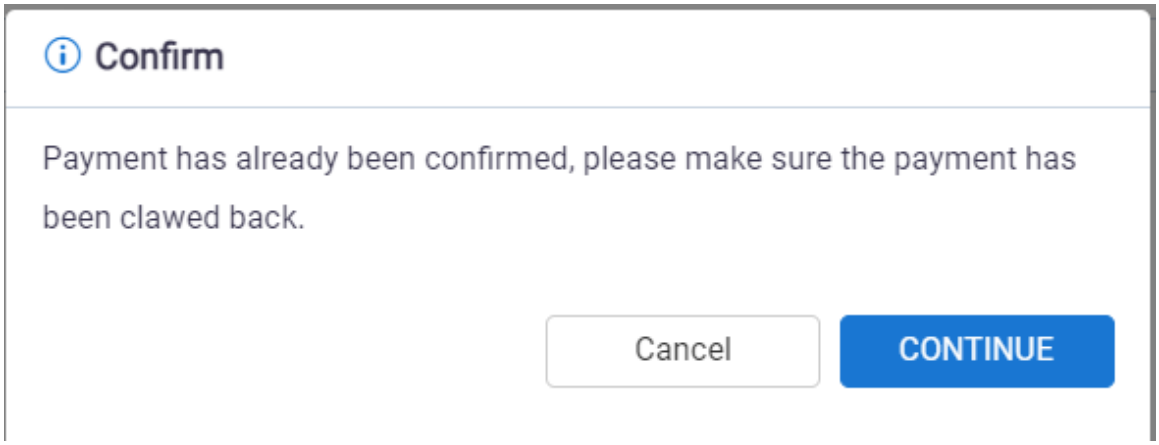

3. Select Payment Records to be cancelled.
4. Select a cancel reason from the Cancel Reason drop-down list, and click **Submit**.

note

To cancel the confirmed payment record, below pop up will be displayed to reminder user the payment has been clawed back. Click **CONTINUE**, go to step 5. Click **Cancel**, the pop up will be closed without performing cancel payment.

Figure 33 Cancel Payment Confirmation

5. The payment records are cancelled. For the Cancelled Payment, you can perform payment requisition. For details, refer to **Payment Requisition**.
6. The end.

Medical Payment Requisition

Prerequisite

- Medical Billing has been created.

---

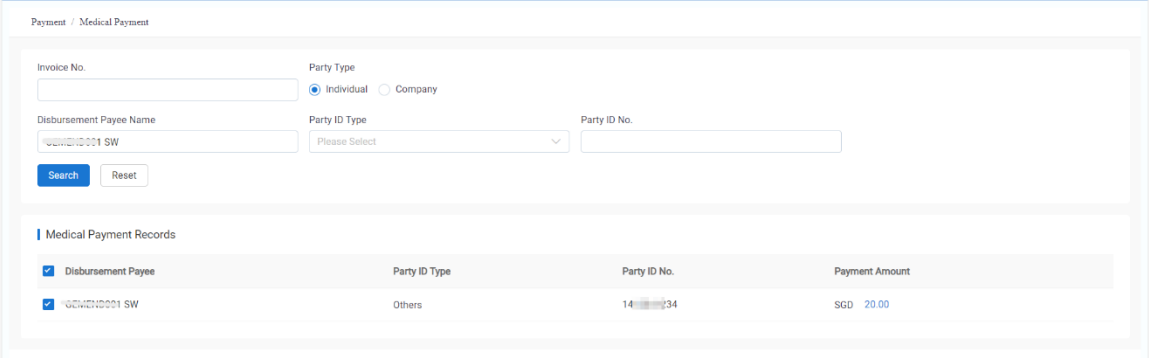

1. From the main menu, select **Payment > Medical Payment Requisition**.

Step Result: The Medical Payment Requisition page is displayed.

2. Set search criteria, then click **Search**.

Step Result: The matching result is displayed in the Search Result table.

Figure 34 Medical Payment Requisition

3. Select the payment records and click **Submit**.
4. The end.

Gemini GL Posting User Guide

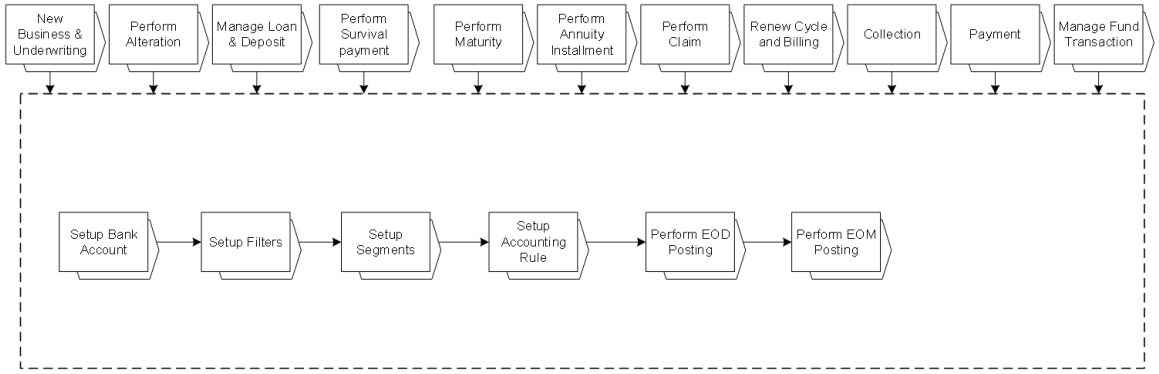

Summarize page

GL Posting Workflow

General Ledger (GL) is the ledger in which all the assets, liabilities, net assets, revenue, and expenses are posted and from which financial statements are prepared.

The Finance Workbench records all policy-related transactions, including collections, payments, loans, and other related transactions. Users can set up GL posting rules for different types of financial transactions. A batch job then starts automatically at the end of the day (EOD) or end of the month (EOM), depending on the nature of the transactions, to post all unposted fee records to the GL system according to the predefined posting rules. The status flag is updated for transactions posted to the GL system to prevent duplicate postings.

Figure 1 Workflow of Posting to GL

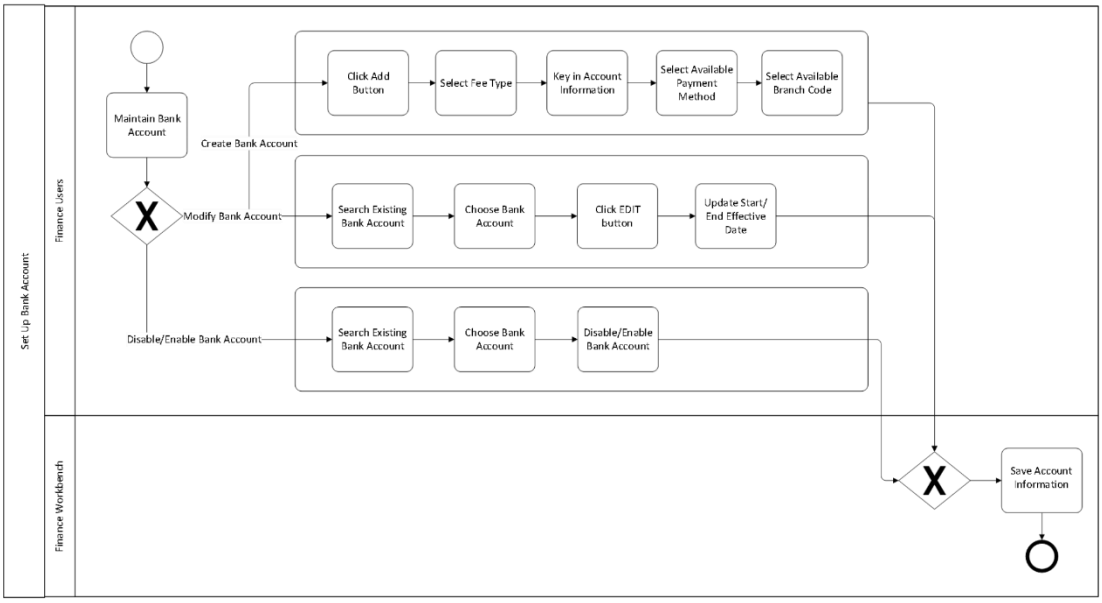

Set Up Bank Account

Before performing collections and payments, finance personnel need to set up bank accounts and establish relationships between fee types, payment methods, branches, and bank accounts. The finance personnel are authorized to create, modify, disable, and enable bank accounts. This section outlines the procedures for using the Finance Workbench to set up bank accounts, including creating, modifying, and disabling accounts.

The following flowchart shows the workflow of setting up a bank account.

Figure 2 Set Up Bank Account

Procedure for Creating a Bank Account

Prerequisite

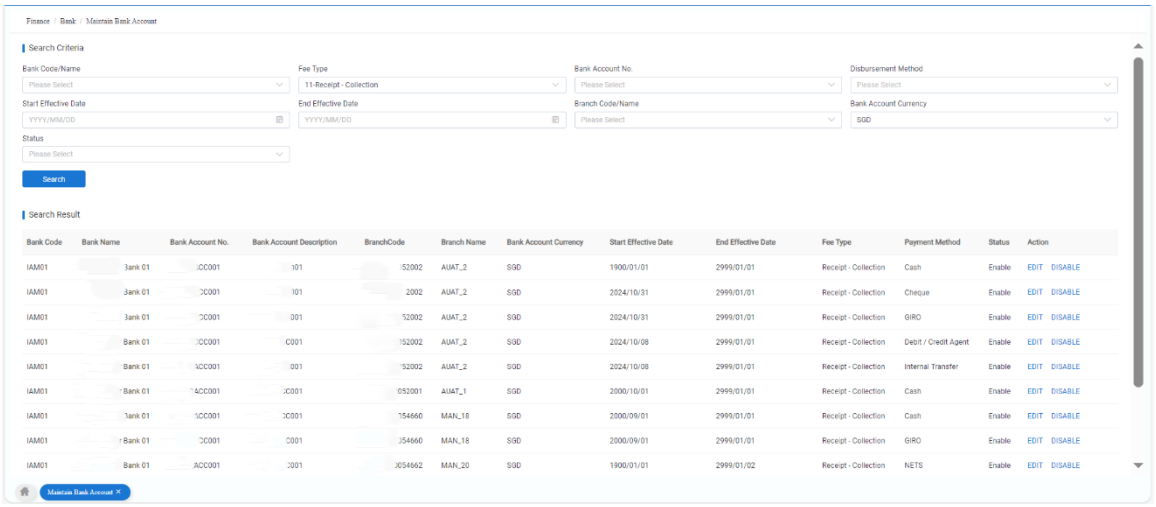

N/A

---

1. From the main menu, select **Finance > Bank > Maintain Bank Account**.

Step Result: The Maintain Bank Account page is displayed.

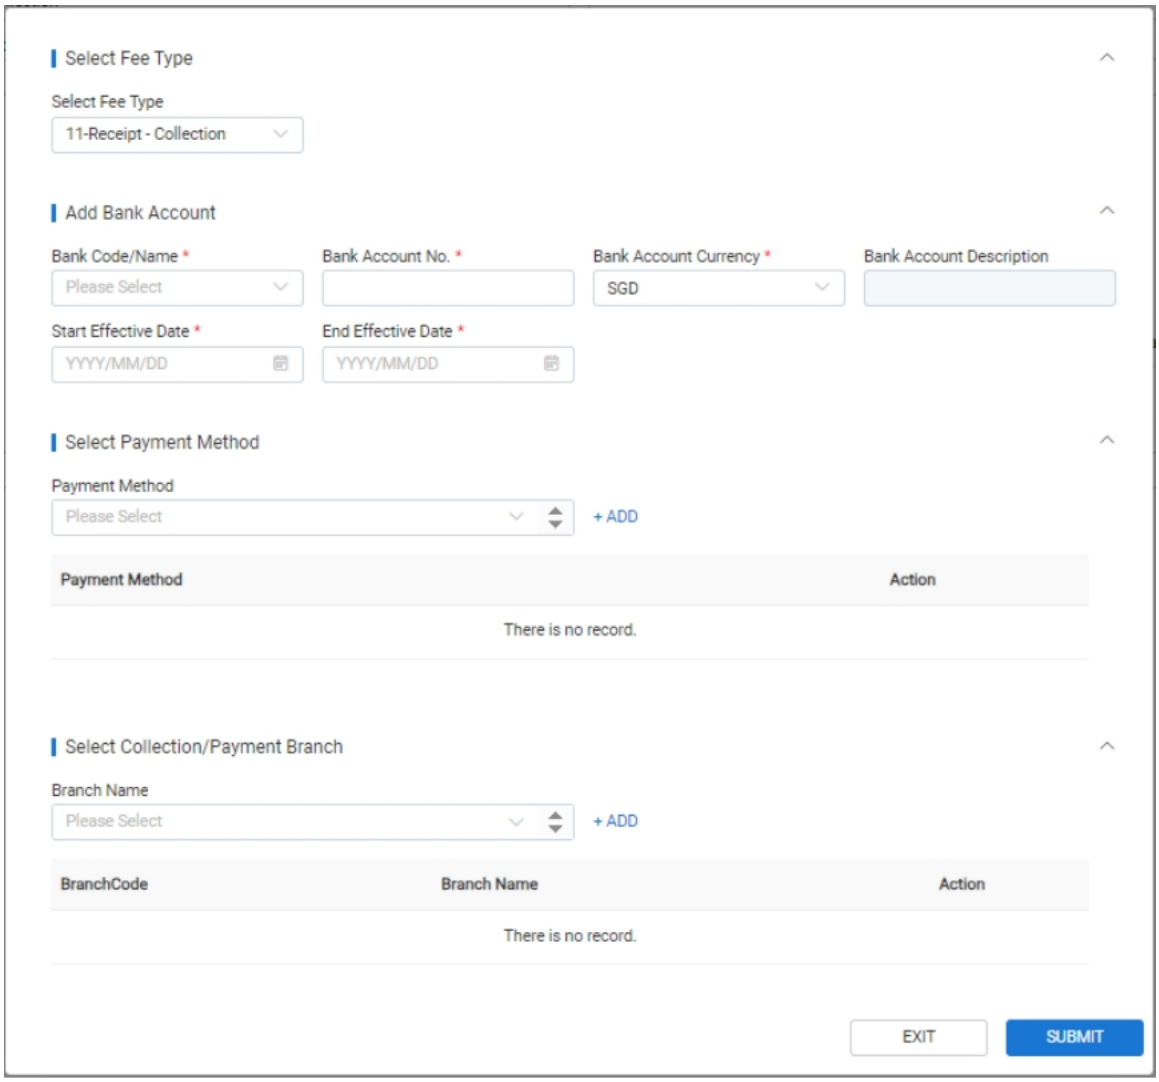

Figure 3 Maintain Bank Account

2. All the existing bank accounts are displayed on the Bank Account Search Result page. Click **Add**.

Step Result: The Add Bank Account page is displayed

Figure 4 Maintain Bank Account - Add

3. Enter bank account information.

a. In the **Select Fee Type** area, select a fee type (11 - Receipt - Collection or 32 - Actual Payment) from the drop - down list.

b. In the **Add Bank Account** area, enter basic information about the bank account.

c. In the **Select Payment Method** area, select payment methods.

- All the payment methods listed in the **Payment Method** drop-down list, select one or multiple Payment Methods and click **Add**. The payment method record is displayed below.
- Or select a payment method record and click **Delete** to delete it.

d. In the **Select Collection/Payment Branch** area, select branch name.

- Select a branch from the Branch Name drop-down list, and then click **Add**. The branch record is displayed below.
- Use the same method to add more branches, or select a branch record and click **Delete** to delete it.

4. Click **SUBMIT** to save the bank account. The system checks whether the bank account already exists.
    - If yes, an error message will be displayed.
    - If no, bank account records will be saved and the account status is set to Enable.

note

A bank account record is made up of one bank account number, one payment method and one branch. That is to say, if three payment methods and two branches are added for a bank account number, after you click **Save**, six bank account records will be generated.

5. The end.

Procedure for Modifying a Bank Account

note

Only the start effective date and end effective date of a bank account record can be modified.

Prerequisite

N/A

---

1. From the main menu, select **Finance > Bank > Maintain Bank Account**.

Step Result: The Maintain Bank Account page is displayed.

2. Set search criteria and then click **Search**.

Step Result: The qualified bank account records are displayed.

3. Select the target record and click **Edit**.

Step Result: The qualified bank account records are displayed.

Figure 5 Modify Bank Account

4. Change the Start Effective Date and End Effective Date and then click **SAVE**. The system checks whether the bank account already exists.
    - If yes, an error message is displayed.
    - If no, the modified information is saved successfully.
5. The End.

Procedure for Disabling a Bank Account

Prerequisite

N/A

---

1. From the main menu, select **Finance > Bank > Maintain Bank Account**.

Step Result: The Maintain Bank Account page is displayed.

2. Set search criteria and then click **Search**.

Step Result: The qualified bank account records are displayed.

3. Select the target record and click **Disable**.

Step Result: The status of the bank account is set to Disable. You can search the bank account record to enable it if required.

4. The End.

GL Configuration

Segment Configuration

General Ledger segment is a part of an accounting system that helps in organizing and categorizing financial transactions and information according to various business dimensions, facilitating detailed analysis and reporting.

This section shows how IT staff can add, modify, or delete a segment in accounting rules.

Prerequisite

N/A

---

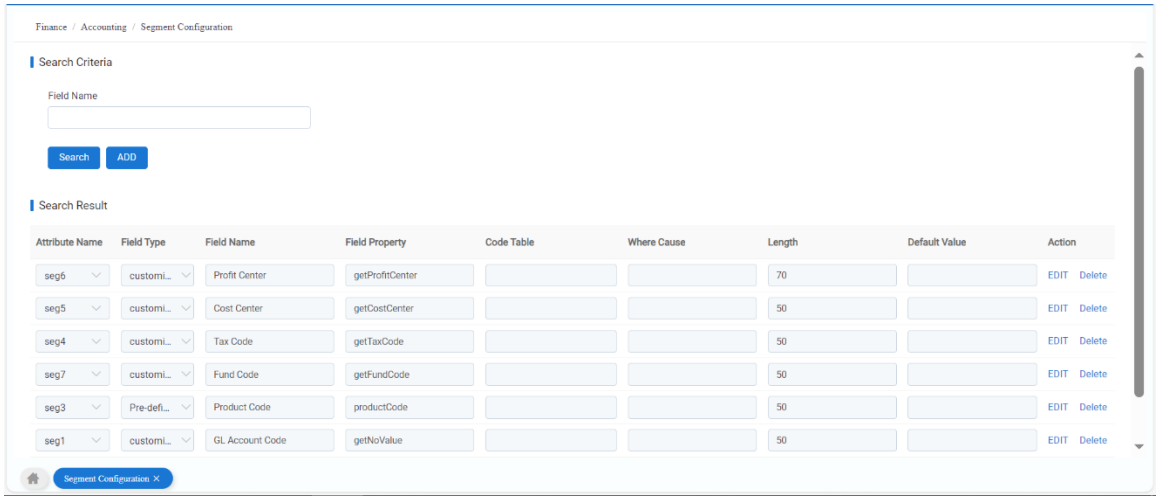

1. From the main menu, select **Finance > Accounting > Segment Configuration**.

Step Result: The Segment Configuration page is displayed.

2. Click **Search**.

Step Result: The existing segment setting is displayed.

Figure 6 Segment Configuration Page

3. If the existing setting does not meet the requirement:
    - Click **Delete** to delete the selected existing segment.
    - Or click **Edit** to modify the existing segment.
    - Or click **ADD** to create a new segment.

Filter Configuration

Filter information is used to segregate every fee type into multiple items of posting rules, which means the transaction records which correspond to one fee type can be posted to different account codes based on different filters. This section shows how to add, modify, or delete a filter in accounting rules.

Prerequisite

N/A

---

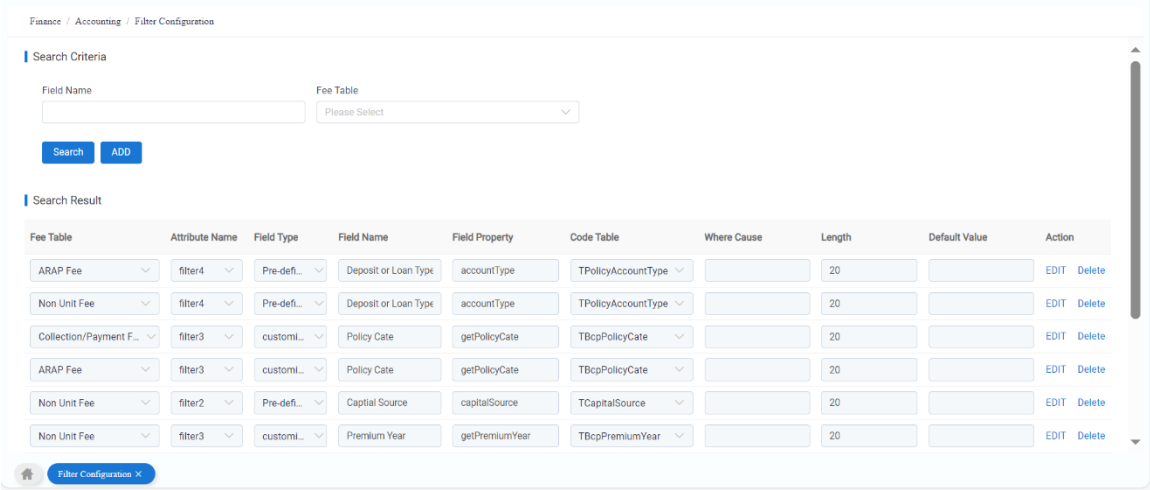

1. From the main menu, select **Finance > Accounting > Filter Configuration**.

Step Result: The Filter Configuration page is displayed.

2. Click **Search** button.

Step Result: The existing filter setting is displayed.

Figure 7 Filter Configuration Page

3. If the existing setting does not meet the requirement:
    - Click **Delete** to delete the selected existing filter.
    - Or click **Edit** to modify the existing filter.
    - Or click **ADD** to create a new filter.

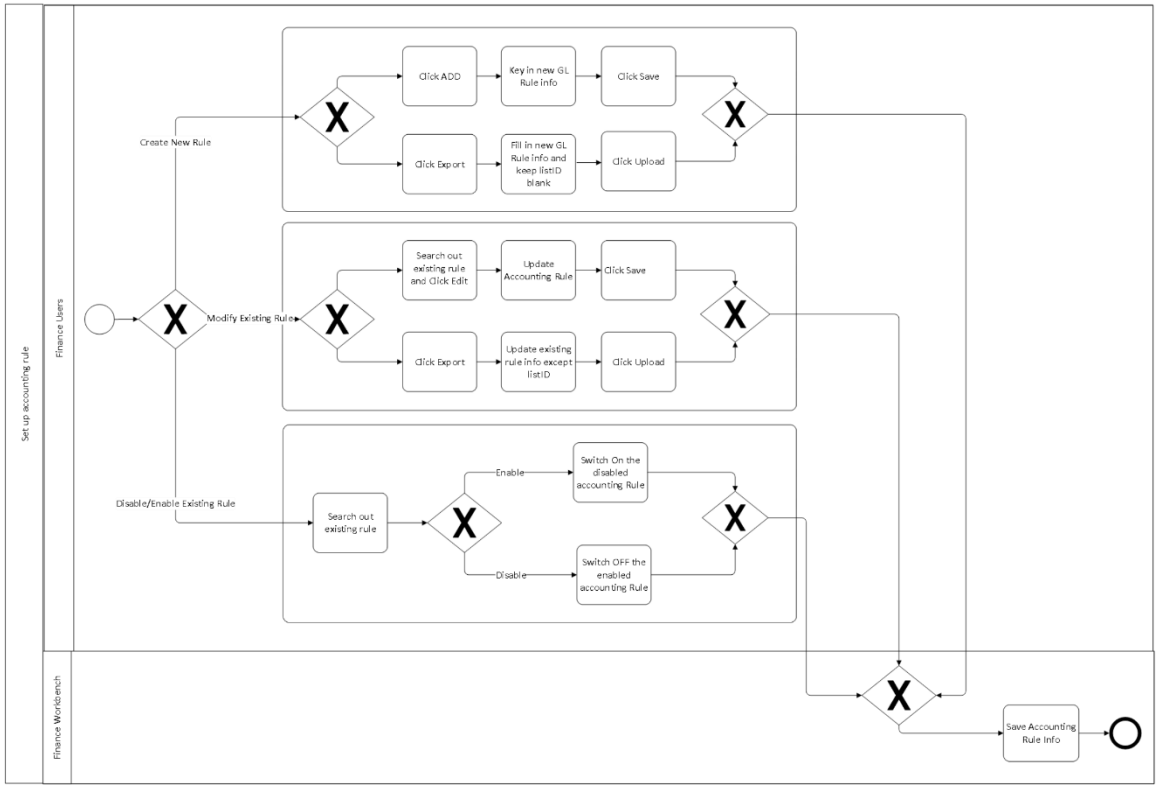

Accounting Rule Configuration

The fee paid to or received from third party has its attributes in the accounting area, such as the fee is expense or income. When a fee is posted to GL, there must be a rule based on these attributes to ensure that the fee is posted correctly. The finance

personnel create, modify, disable, and enable the accounting rule for GL posting. This section describes how to set up an accounting rule.

The following flowchart shows the workflow of setting up an accounting rule.

Figure 8 Workflow of Setup Accounting Rule

Prerequisite

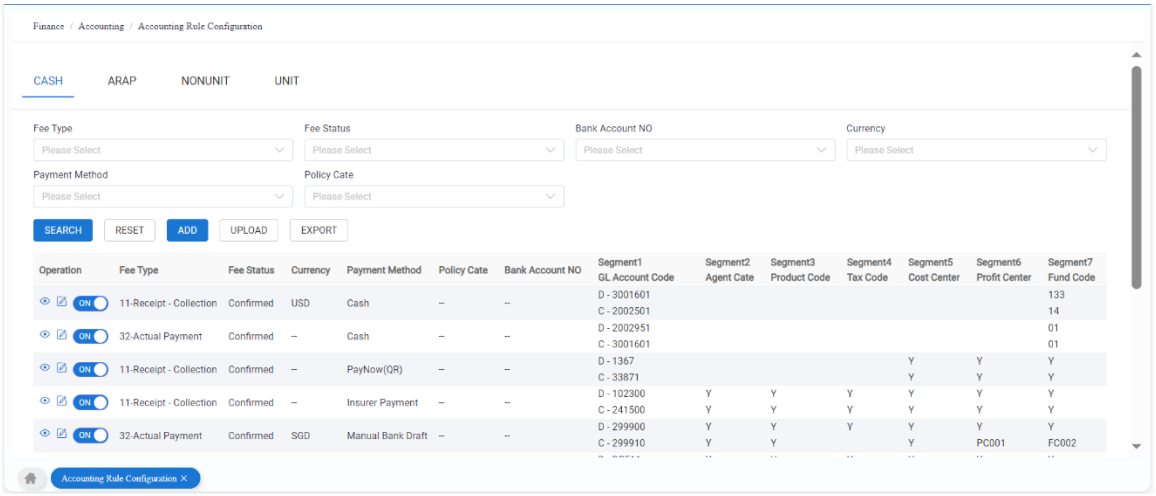

N/A

---

1. From the main menu, select **Finance > Accounting > Set Accounting Rule**.

Step Result: The Accounting Rule Configuration page is displayed.

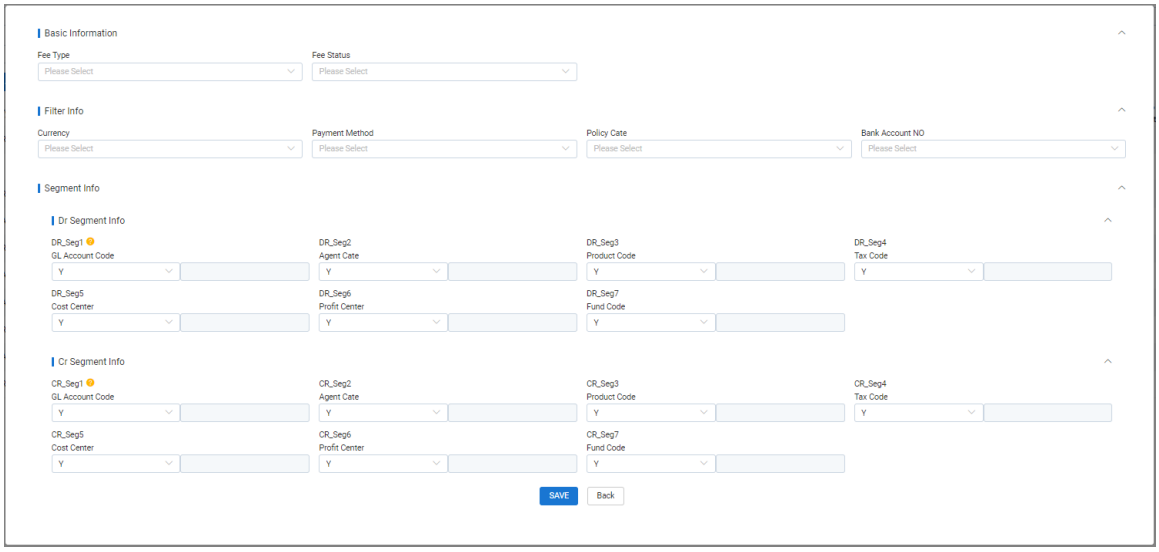

Figure 9 Accounting Rule Configuration Page

2. Select fee source from Cash, ARAP, NONUNIT, or UNIT tab.
3. Click **Add** to add a new accounting rule.

Step Result: The Add Accounting Rule page is displayed.

Figure 10 Accounting Rule Configuration - Add

4. Enter basic information, filter information, and segment information.
5. Click **Save**.
    - To View an existing rule, search out the target rule and click **View**.
    - To modify an existing rule, search out the target rule and click **Edit**.

- To disable an existing rule, search out the target rule and click **Disable**. Once the accounting rule is disabled, the GL posting will ignore the disabled accounting rule.
- To upload accounting rules, click **UPLOAD**.
- To export existing accounting rules, click **EXPORT**.

6. The end.

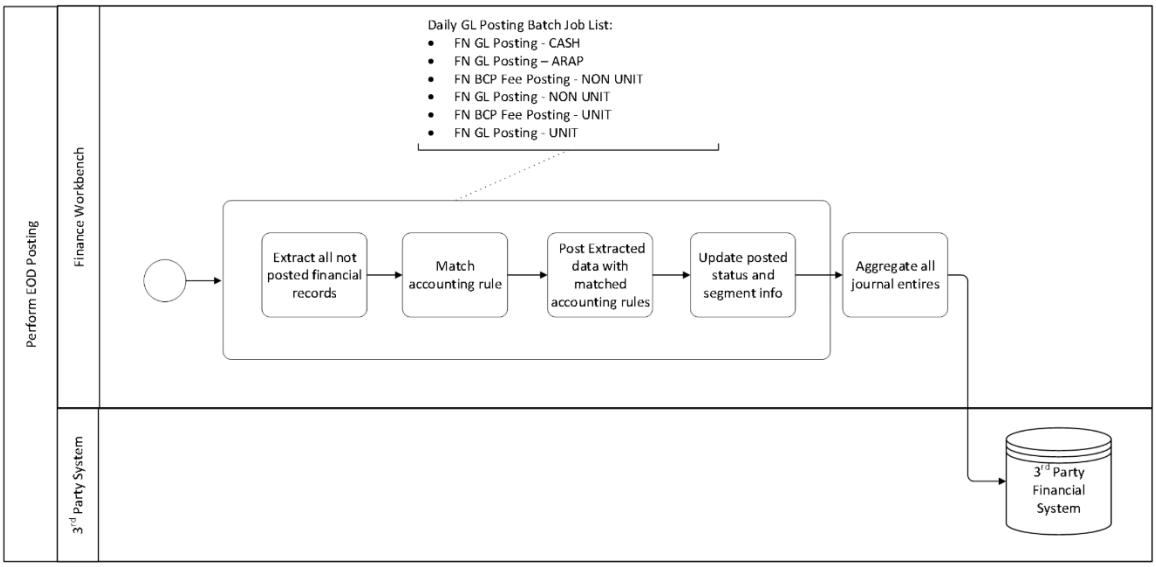

GL Posting Batch Process

Perform Daily Financial Transaction Posting

At the end of each day, the system will start a batch job to post financial records to the GL system according to the predefined posting rules. This section describes the end of day (EOD) posting process.

The following flowchart shows the workflow of EOD posting.

Figure 11 Workflow of EOD Posting

Prerequisite

- Accounting rule has been set up.
- The fee is defined to be posted to GL as T_FEE_TYPE.POSTED_TO_GL = “Y”

---

1. At the end of each day, the system starts a batch job of EOD posting.

a. The system extracts all not posted financial records.

b. The system match accounting rule per pre-defined.

c. The system post data with matched accounting rules.

d. The system updated the Posted state and segment info into respective fee tables.

JOB_NAME	Job Description	Data Extraction Condition	Run Frequency
FN GL Posting - CASH	This is a daily batch job to post F11 – Receipt Collection and F32 – Actual Payment extracted from T_BCP_CASH_FEE table.	• T_FEE_TYPE.POSTED_TO_GL= "Y" • Posted = "N" • FEE_STATUS = "1 - Payment Confirmed" • ACCOUNTING_DATE <= process date	Daily
FN GL Posting - ARAP	This is a daily batch job to post receivable and payable fee transactions from T_BCP_ARAP_FEE table.	• T_FEE_TYPE.POSTED_TO_GL = "Y" • Posted = "N" • FEE_STATUS = "1 - Payment Confirmed" • ACCOUNTING_DATE <= process date	Daily
FN BCP Fee Posting - NON UNIT	This is a daily batch job to extract capital distribute transactions records from Policy Admin: t_capital_distribute to Finance Workbench: t_bcp_non_unit_fee	t_capital_distribute.postedToFn = "N"	Daily before batch FN GL Posting - NON UNIT
FN GL Posting - NON UNIT	This is a daily batch job to post capital distribute transactions records from T_BCP_NON_UNIT_FEE table.	• Posted = "N" • ACCOUNTING_DATE <= process date	Daily

JOB_NAME	Job Description	Data Extraction Condition	Run Frequency
FN BCP Fee Posting - UNIT	This is a daily batch job to extract capital distribute transactions records from Policy Admin: t_fund_cash to Finance workbench: t_bcp_unit_fee	t_Fund_cash.postedToFn = “N”	Daily before batch FN BCP Fee Posting - UNIT
FN GL Posting - UNIT	This is a daily batch job to post fund cash transaction records from T_BCP_UNIT_FEE table to GL.	• Posted = “N” • ACCOUNTING_DATE <= process date	Daily

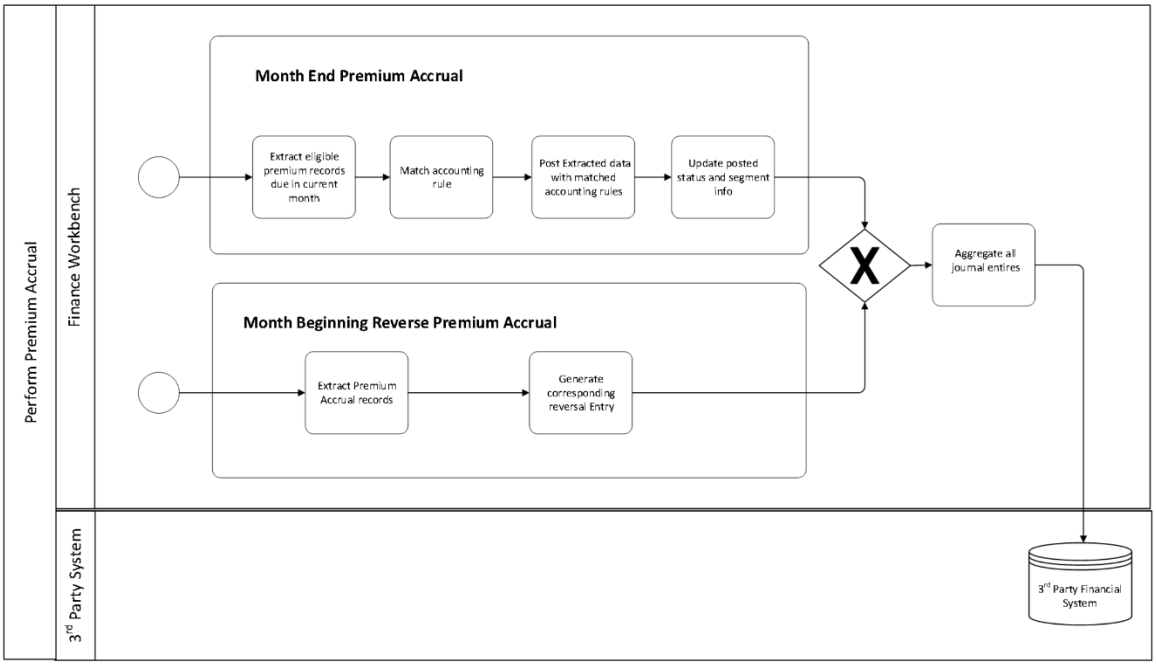

2. The system aggregates all journal entries and sends them to the third party financial system for processing.
3. The end.

Perform Month End Premium Accrual Posting

At the end of each month, the system will start a batch job to post eligible premium records to the GL system according to the predefined posting rules. At the beginning of the subsequent month, system to will start a batch job to post the reversal of premium accrual records in last month. This section describes the end of month (EOM) posting process.

The following flowchart shows the workflow of EOM posting.

Figure 12 Workflow of EOM Posting

Prerequisite

- Accounting rule has been set up.

---

1. At the end of each month, the system starts a batch job of EOM posting.

a. The system retrieves eligible premium records.

b. The system match accounting rule per pre-defined.

c. The system extracts data with matched accounting rules.

d. The system updates the Posted state and segment info into T_BCP_ARAP_FEE table, store the premium accrual records into T_BCP_Prem_Accrual table.

JOB_NAME	Job Description	Data Extraction Condition	Run Frequency
FN Premium Accrual	Post GL for accrual premium from T_BCP_ARAP table.	• FEE_TYPE in (41 - Premium Application, 569 - Regular Top Up Premium) • AND FEE_STATUS in (0 - Waiting for Processing,4 - Bank Transferring)	Month End

JOB_NAME	Job Description	Data Extraction Condition	Run Frequency
		• AND due_date < PROCESS_DATE	

2. The system aggregates all journal entries and sends them to the third party financial system for processing.
3. At the beginning of each month, the system starts a batch job to generate reversal GL entry for premium accrual records.

a. The system extract premium accrual records with ACCOUNTING_DATE <= process date AND REVERSE_INDI = 'N'.

b. The system generates reversal GL entry for premium accrual records into T_BCP_ARAP_FEE table and update REVERSAL_INDI='Y' T_BCP_Prem_Accrual table.

JOB_NAME	Job Description	Data Extraction Condition	Run Frequency
FN Premium Accrual Reversal	Generate Reversal GL entry for accrual premium records in T_BCP_Prem_Accrual table.	• ACCOUNTING_DATE <= process date • AND REVERSE_INDI = 'N'	Month Beginning

4. Aggregated and sends them to the third party financial system for processing.
5. The end.

GL Posting Query

This section describes how to query GL Post result.

Prerequisite

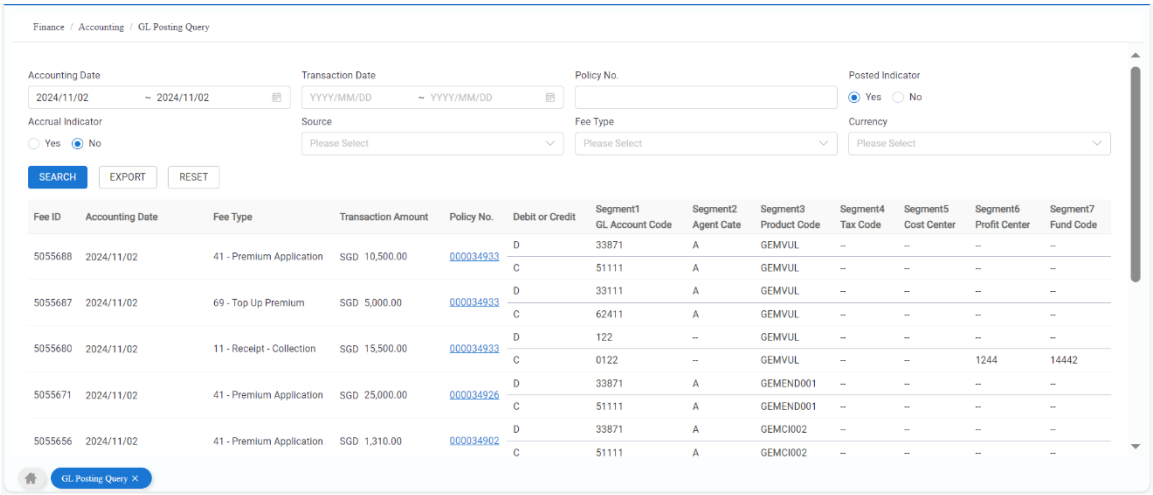

- The GL posting batches have been executed.
- Posted = "Y" to query the successful GL post result.

---

1. From the main menu, select **Finance > Accounting > GL Posting Query**.
2. Set search criteria and click **SEARCH**.

Step Result: The qualified GL posting records are displayed.

Figure 13 GL Posting Query Page

3. The end.

note

Click the Policy No. hyperlink will navigate to Policy Query->Transaction Fee Records page.

Field	Description
Main Insured	Life Assured of the Main Benefit.
Product Code	Display the Benefit named in the policy.
Commencement Date	Display Commencement Date. Format: YYYY/MM/DD
Product Status	Display the Product Status for the benefit.
Cover Period	Display the Cover period selected for the benefit.
Payment Period	Display the Payment period selected for the benefit.
Sum Assured/Unit/Level	Display the Sum Assured/Unit/Level entered for the benefit.
Premium	Display the premium entered or calculated per the benefit.

Field	Description
Next Due Date	Next due date of the benefit. Format: DD/MM/YYYY

Table 8 Description of Fields on Customer Service Application - Fund Info Area

Field	Description
Fund Name/Code	Display the Fund Name and Code per fund.
Fund Currency	Display the Fund Currency per fund.
Fund Units	Display the Fund Unit per fund.
Unit Price	Display the Fund Price per fund.
Latest Price Date	Display the Latest Fund Price per fund.
Value in Fund Currency	Current Value in Fund Currency=Current Fund Unit*Latest Fund Price.
Value in Policy Currency	Current Value in Policy Currency is exchanged from the Current Value in Fund Currency.
Coupon Disposal Option	Coupon is the dividend units declared by fund house for a specific fund.It is available for the funds defined with coupon feature.

Table 9 Description of Fields on Customer Service Application - Collection/Refund Summary

Field	Description
Application Item	Display the Alteration Name having collection/Refund fee record generated.
Product Code	Display the Benefit Name having collection/Refund fee record generated based on alteration name.
Fee Type	Display the Fee Type per collection/Refund fee record.
Due Date	Display the Due Date per collection/Refund fee record.
Fee Amount	Display the Fee Amount per collection/Refund fee record.

Field	Description
Application Comment	Enter comments for customer service data entry if any.

Field Description for Customer Service — Maintain Individual Customer

Table 10 Description of Fields in Maintain Individual Customer Page - Edit Basic Information

Field	Description
Given Name	Enter the given name for the customer. This field is optional.
Surname	Enter the given name for the customer. This field is editable and required.
Other Name	Enter an other name for the customer. This field is optional.
Alias Name	Enter an alias name for the customer. This field is optional.
Name Format	Format for the customer's name. Full name of the customer will display based on the name format.
Courtesy Title	Select curtesy title of the customer from the dropdown list. This field is connected with Gender. Eg. If Courtesy Title is selected as Ms, then Gender will be auto filled with Female. If Gender is selected as Female/Male, then the dropdown list will filter and display options related to the specific gender.
Gender	Gender of the customer. Male or Female.
DOB	DOB of the customer. Select from the date picker. This field is required.
Multiple Nationality Indicator	Indicate if the customer has multiple nationality. Yes or No. This field is required. If selected Yes, the interface will display one more field Nationality 2 to capture multiple nationalities. Values for the nationalities can not be duplicated.
Nationality	Nationality of the customer. Select from the list. This field is required.

Field	Description
Citizenship	Citizenship of the customer. This field is read-only and its value is auto filled according to Nationality and ID Type.
Place of Birth	The place where the customer was born. Select from the list.
Marital Status	Marital status of the customer. Select from the list.
Vip Indicator	Indicate if the customer is VIP. Yes or No.
Vip Layer	Select VIP layer of the customer. Gold or Silver.
Religion	Select religion of the customer from the list.
Language Preferred	Select language that the custmer prefers.
PVC	Select if this customer is Potentially Vulnerable Customer (PVC). Yes or No.
Last Review Date	Select last review date from the date picker. This date cannot be a future date.

Table 11 Description of Fields in Maintain Individual Customer Page - Edit Contact Number/Email

Field	Description
Country/Territory	Country/Territory of customer's Mobile No.. Once selected, the country/territory code will be auto filled according to mapping relations between Country/Territory and Country/Territory Code.
Country/Territory Code	Country/Territory Code of customer's Mobile No.. Once selected, the country/territory will be auto filled according to mapping relations between Country/Territory and Country/Territory Code.
Mobile No.	Customer's Mobile No..
Country/Territory	Country/Territory of customer's Office No..Once selected, the country/territory code will be auto filled according to mapping

Field	Description
	relations between Country/Territory and Country/Territory Code.
Country/Territory Code	Country/Territory Code of customer's Office No.. Once selected, the country/territory will be auto filled according to mapping relations between Country/Territory and Country/Territory Code.

Country/Territory	Country/Territory of customer's Home No..Once selected, the country/territory code will be auto filled according to mapping relations between Country/Territory and Country/Territory Code.
Country/Territory Code	Country/Territory Code of customer's Home No.. Once selected, the country/territory will be auto filled according to mapping relations between Country/Territory and Country/Territory Code.
Home No.	Customer's Home No..
Country/Territory	Country/Territory of customer's Other Phone No.. Once selected, the country/territory code will be auto filled according to mapping relations between Country/Territory and Country/Territory Code.
Country/Territory Code	Country/Territory Code of customer's Other Phone No.. Once selected, the country/territory will be auto filled according to mapping relations between Country/Territory and Country/Territory Code.
Other Phone No.	Customer's Other Phone No..
Email	Customer's email address.
Preferred Communication Mode	Customer's preferred communication mode. Electronic or Hardcopy. This field is default as Hardcopy and read-only when Email is empty or not filled in proper value.

Field	Description
Marketing Material Consents	Indicate if customer has given consents for receiving marketing material.
Marketing Mode	This field is only editable when marketing material consents is Yes.
Office Ext.	Office Ext of the customer.
Fax No.	Fax No of the customer.

Table 12 Description of Fields in Maintain Individual Customer Page - Edit AML Information

Field	Description
FCC Category	Select type of Financial Crime Country (FCC) from the list. Dropdown list options: BL - Blacklist CR - Cross Border Restrictions DT - Deemed Terrorist (TSOFA) FO - Freezing Order HT - Higher Tax Risk (CIP) ID - Obtain Identity Document OD - Outstanding Documents PO - Production Order RF - Ring Fenced (exit customer) SA - Sanctioned Customer ST - Suspicious Transaction Report SR - SRIP Service Restriction in Place TR - TRA.
Client Category	It is the client category for AML. Dropdown list options: HI - High Risk ME - Medium Risk LO - Low Risk SC - Special Category (SCC) PE - Politically Exposed Person (PEP) PH - Highest Risk PEP.

Field	Description
HUB Number	Input data field allow user to capture the information.
Last Review Date	Last review date of AML information.

Table 13 Description of Fields in Maintain Individual Customer Page - Edit Identifier Information

Field	Description
ID Type	Enter ID Type for the customer. This field is editable and required. If selected Others, the interface will display one more field ID Type - Other to capture the specific ID type.
Type of Pass	Select Type of the customer's pass.
ID/Pass No.	Enter the ID/Pass No. for the customer. This field is editable and required.
ID/Pass Expiry Date	Expiry Date of the customer's ID/Pass. Select from the datepicker.
Issue Date	Identifier ID Issue Date which can be entered manually by user or selected from the date picker.
Place of Issue	Enter place of identifier ID issued.

Table 14 Description of Fields in Maintain Individual Customer Page - Edit Occupation & Income Information

Field	Description
Occupation	Select Occupation of the customer from the list. This field is required. Occupation and industry have mapping relationship. Once occupation is selected, dropdown list of industry will be filtered, and vise versa.
Industry	Select industry from the list. This field is required. Occupation and industry have mapping relationship. Once occupation is selected, dropdown list of industry will be filtered, and vise versa.

Field	Description
Employment Status	Select employment status of the customer. This field is optional. If Employment status is selected as one of below options, an additional field Nature of Business will appear beside it and will be required: Self-employed (Sole Proprietor / Freelance), Self-employed (Business Owner), Key Controller (such as CEO, CFO, COO, MD). If Employment status is selected as Others, an additional field Please Specify will appear beside it and will be required.
Job Title	Job title of employment.
Name Of Business	Enter name of business.
Business Type	Select business type from the list.
Category	Select category from the list.
Sub-category	Select sub-category from the list.
Country of Source of Ongoing Wealth/Income	Select from the list. Allow multiple selection.
Source of Ongoing Wealth/Income	Select from the list. Allow multiple selection. In the option list, there is an option for “others” and once the others option is selected, the interface will display one more text field “Source of Ongoing Wealth/Income - Others” right beside “Source of Ongoing Wealth/Income” for user to specify the source name.
Annual Income	Annual income of the proposer.
Currency(Annual Income)	Dropdown list. Allow user to select the currency for proposer’s annual income.

Table 15 Description of Fields in Maintain Individual Customer Page - Edit CRS Information

Field	Description
SC Status	Select SC Status from the list. Options are: CP - Completed, NR - Not Required, OD - Overdue, OS - CRS Out of Scope, RC -

Field	Description
	Received, RD - Required, RQ - Requested, UD - Undocumented.
IP Relationship	Select IP relationship from the list.
Tax Residence Country/Territory	Select tax residence country/territory from the list.
Tax Residence Id	Entry tax residence ID.
Reason for No TIN	Select reason for no TIN from the list.
Reason for No TIN - Other	Specify reason for no TIN.

Table 16 Description of Fields in Maintain Individual Customer Page - Edit Address Information

Field	Description
Address Format	Default as NO and is not editable.
Address Type	Select Address Type from the list. Available options: Previous, Permanent, Residential, Mailing, Business. If user wants to add a new Residential Address, the user need to change the original Residential Address type to Previous Address manually.
Same as Residential Address	This is a check box. User can check to make Permanent Address = Residential Address and auto-populate residential address details to permanent address field.
Address Status	Select Valid or Invalid from the list.
Country/Territory	Select Country/Territory from the list.
Address1	Enter address information.
Address2	Enter address information.
Address3	Enter address information.
Address4	Enter address information.
Postal Code	Enter postal code.

Table 17 Description of Fields in Maintain Individual Customer Page - Edit Bank Account Information

Field	Description
Account Type	Select account type from the list. This field is required. Available options: CPF-OA CPF-SA SRS GIRO Credit Card If selected GIRO, it will display one more field Bank City for user to select. If selected Credit Card, it will display two more fields Credit Card Type and Expiration Date for user to select.
Account No.	Enter account no. This field is required.
Account Holder Name	Enter account holder name. This field is required.
Bank Headquarter Code	Select Bank Headquarter Code. This field is required.
Bank Code	Select Bank Code. This field is required.
Account Status	Select account status. Valid or Invalid. This field is required.

Table 18 Description of Fields in Maintain Individual Customer Page - Edit Insurance Factor

Field	Description
Height(cm)	Enter height of the customer.
Weight(kg)	Enter weight of the customer.
BMI	Value of this field is auto calculated after height and weight are captured.
Smoker Indicator	Select smoker indicator. Yes or No.

Field	Description
Claim Indicator	Select Claim indicator. Available options: TPDB, LA, LTC.
Life Indicator	Select life indicator from the list. Non-preferred life or Preferred life.
EM value(%)	Enter EM value of the customer.
Medical Exam	Select Yes or No from the list.

Table 19 Description of Fields in Maintain Individual Customer Page - Edit Customer Status

Field	Description
Customer Status	Select customer status from the list. This field is required. Available options: Active, Inactive, Transferred, Dead.
DOD	Select Date of death of the customer. This field is required when customer status is dead.
Status Date	Select status date from the date picker.
Bankruptcy Status	Select Yes or No.
Bankruptcy Order No.	Enter bankruptcy order no.
Bankruptcy Order Date	Select bankruptcy order date from the datepicker.
Bankruptcy Discharge Date	Select bankruptcy discharge date from the datepicker.
Fraud	Select Yes or No from the list. This field is required.
Fraud On Policies	Enter fraud on policies.

Table 20 Description of Fields in Maintain Individual Customer Page - Edit FATCA

Field	Description
FATCA Indicator	Select FATCA indicator from the list. Available options: Y — USP N— Non-USP

Field	Description
	U — Unspecified USP R — Recalcitrant.
Bank FATCA Indicator	Select bank FATCA indicator from the list. Available options: Y — USP, N— Non-USP, U — Unspecified USP, R — Recalcitrant.
US Tax ID	Enter US Tax ID.
Tax Country/Territory	Select tax country/territory from the list.
Secrecy Waiver	Select from the list. Yes or No.
W8 Received	Select from the list. Yes or No.
W8 Rcv Date	Select W8 Rcv Date from the datepicker.
W8 Exp Date	Select W8 Exp Date from the datepicker.

Table 21 Description of Fields in Maintain Individual Customer Page - Edit PEP Information

Field	Description
Politically Exposed Person (PEP)	Select from the list. Yes or No.
Given Name of PEP	Enter Given Name of PEP.
Surname of PEP	Enter Surname of PEP.
Alias Name of PEP	Enter alias name of PEP.
Relationship with PEP	Select relationship with PEP from the list.
Relationship with PEP Other	Input field to capture specific relationship with PEP. This field is only editable when relationship with PEP is Other.
Position held by PEP	Input data field allow user to capture position held by the PEP.
Country/Territory where PEP is located	Input data field allow user to capture country/territory where PEP is located.

Table 22 Description of Fields in Maintain Individual Customer Page - Edit Other Information

Field	Description
CKA Passed	Indicate if Customer Knowledge Assessment is passed. Yes or No.
CKA Assessment Date	Select CKA assessment date from the datepicker.

Table 23 Description of Fields in Maintain Individual Customer Page - Related Policy Info Table

Field	Description
Policy No.	Display policy no. related with this customer.
Policy Status	Display policy status of the related policy.
Party Role	Display party role that the customer plays in the policy.
Address	Address applied for the policy. This information can be editable by clicking EDIT.
Bank Account	Display bank account applied for the policy.
GIRO/Credit Card Mandate Status	Display mandate status of GIRO/Credit Card applied for the policy.
Action	This column allow user to click EDIT button to edit related policy information.

Field Description for Customer Service - Maintain Company Customer

Table 24 Description of Fields in Maintain Company Customer Page - Edit Basic Information

Field	Description
Company Name	Enter name of the company customer. This field is required.
ROC Type	Select ROC type from the list. This field is required.
Cert of Inc/UEN	Enter cert of inc/UEN.

Field	Description
Register Date	Select register date from the list.
Expiry Date	Select expiry date from the list.
Registered Country/Territory	Select registered country/territory from the list.
Country/Territory of Inc	Select country/territory of Inc from the list.
Trading As Name	Enter trading as name.
Business Type	Select business type from the list.
Category	Select category from the list.
Sub-category	Select sub-category from the list.
Econ Activity	Select econ activity from the list.
Country/Territory	Select country/territory from the list.
Country/Territory Code	Select country/territory Code from the list.
Office Tel.	Enter office tel.
Company Email Address	Enter company email address.
Last Review Date	Enter the last review date for this customer. This date cannot be a future date.

Table 25 Description of Fields in Maintain Company Customer Page - Edit Address Information

Field	Description
Address Format	Default as NO and is not editable.
Address Type	Select Address Type from the list. Available options: Registered Office, Mailing, Business.
Address Status	Select Valid or Invalid from the list.
Country/Territory	Select Country/Territory from the list.
Address1	Enter address information.

Field	Description
Address2	Enter address information.
Address3	Enter address information.
Address4	Enter address information.
Postal Code	Enter postal code.

Table 26 Description of Fields in Maintain Company Customer Page - Edit Bank Account Information

Field	Description
Account Type	Select account type from the list. This field is required. Available options: CPF-OA CPF-SA SRS GIRO Credit Card. If selected GIRO, it will display one more field Bank City for user to select. If selected Credit Card, it will display two more fields Credit Card Type and Expiration Date for user to select.
Account No.	Enter account no. This field is required.
Account Holder Name	Enter account holder name. This field is required.
Bank Headquarter Code	Select Bank Headquarter Code. This field is required.
Bank Code	Select Bank Code. This field is required.
Account Status	Select account status. Valid or Invalid. This field is required.

Table 27 Description of Fields in Maintain Company Customer Page - Edit AML Information

Field	Description
FCC Category	Select type of Financial Crime Country (FCC) from the list. This field allows multiple selection. Dropdown list options: BL - Blacklist CR - Cross Border Restrictions DT - Deemed Terrorist (TSOFA) FO - Freezing Order HT - Higher Tax Risk (CIP) ID - Obtain Identity Document OD - Outstanding Documents PO - Production Order RF - Ring Fenced (exit customer) SA - Sanctioned Customer ST - Suspicious Transaction Report SR - SRIP Service Restriction in Place TR - TRA.
Client Category	It is the client category for AML. Dropdown list options: HI - High Risk ME - Medium Risk LO - Low Risk SC - Special Category (SCC) PE - Politically Exposed Person (PEP) PH - Highest Risk PEP.
HUB Number	Input data field allow user to capture the information.
Last Review Date	Last review date of AML information.

Table 28 Description of Fields in Maintain Company Customer Page - Edit FATCA

Field	Description
FATCA Indicator	Select FATCA indicator from the list. Available options: Y — USP N— Non-USP

Field	Description
	U — Unspecified USP R — Recalcitrant.
Bank FATCA Indicator	Select bank FATCA indicator from the list. Available options: Y — USP N— Non-USP U — Unspecified USP R — Recalcitrant.
GIN Number	Enter GIN number.
Ent Main Cls	Enter ent main Cls.
Ent Sub Cls	Enter ent Sub Cls.
SIC1	Select SIC code from the list.
SIC2	Select SIC code from the list.
SIC3	Select SIC code from the list.

Table 29 Description of Fields in Maintain Company Customer Page - Edit CRS Information

Field	Description
SC Status	Select SC Status from the list. Options are: CP - Completed NR - Not Required OD - Overdue OS - CRS Out of Scope RC - Received RD - Required RQ - Requested UD - Undocumented.
IP Relationship	Select IP relationship from the list.
CRS Entity Type	Select CRS entity type from the list.

Field	Description
Tax Residence Country/Territory	Select tax residence country/territory from the list.
Tax Residence Id	Entry tax residence ID.
Reason for No TIN	Select reason for no TIN from the list.
Reason for No TIN - Other	Specify reason for no TIN.

Field	Description
Customer Status	Select Customer Status from the list. Valid or Invalid.

Table 31 Description of Fields in Maintain Company Customer Page - Related Policy Info Table

Field	Description
Policy No.	Display policy no. related with this customer.
Policy Status	Display policy status of the related policy.
Party Role	Display party role that the customer plays in the policy.
Address	Address applied for the policy. This information can be editable by clicking EDIT.
Bank Account	Display bank account applied for the policy.
GIRO/Credit Card Mandate Status	Display mandate status of GIRO/Credit Card applied for the policy.
Action	This column allow user to click EDIT button to edit related policy information.

Table 32 Description of Fields in Maintain Company Customer Page - Connected Party Info Table

Field	Description
Full Name	Display full name of the connected party.

Field	Description
Roles in Organization	Display roles of the connected party in the organization.
Share Percentage(%)	Display share percentage of the connected party.
Action	Allow user to delete party by clicking DELETE button in this column.

Field Description for Customer Service - Reverse Policy Transaction

Table 33 Description of Fields in Reversal Policy Transaction — Policy Info Area

Field	Description
Policy No.	Display Policy No. for selected policy.
Proposal No.	Display Proposal No. for selected policy.
Policy Holder	Display Policy holder name for selected policy.
Policy Status	Display Policy Status for selected policy.
Payment Method	Display Payment Method for selected policy.
Commencement Date	Display Commencement Date for selected policy.

Table 34 Description of Fields in Reversal Policy Transaction - Transaction Info Area

Field	Description
Transaction Type	Display the relevant transaction type.
Transaction Name	System display all the transaction by the order of transaction effective date. The transaction in the skip list will be gray out, all transaction happen after claim transaction will be gray out.
Transaction Effective Date	Display the effective date of the transaction.
Transaction Date	Display the date of the transaction.

Field	Description
Operator Name	Display the name of the operator.

Table 35 Description of Fields in Reversal Policy Transaction - Reversal Info Area

Field	Description
Reversal Reason	Dropdown list with below reversal reasons for user to select: Dishonored Cheque, Cancellation of Application, Incorrect Amount, Human Error / Customer Request.
Reversal Comments	Enter reversal comments if any.
Submit	System process the reverse all selected transaction.

Appendix: Rules for Gemini Customer Service

Summarize page

Rules for Customer Service Registration

When you click **Register**, a new application will be generated and system set the frozen status of the policy to **Yes**.

System will carry out following checks:

1. Policy No. should exist in system.
2. Policy is not suspended by other CS or claim.
3. Policy is not in GIRO/CC deduction cycle (fee status is “bank transferring”).

Customer Service Entry Rules

This section tells the rules of application entry.

4. When you click the target application, then the system updates the application status to Processing in Progress, and display application entry information.
5. Any new alteration item added is in Pending Data Entry status.

6. When you click **Submit** to submit the application data entry, system will check:

a) If there are outstanding manual issues. If not all the issues are closed or deleted, system will pop up an error message to inform users.
b) If there are outstanding letters. If not all the query letters are replied, system will pop up an error message to inform users.

7. When you click **Submit** to submit the application data entry. CS workbench will check the workflow configuration table to decide the next step:

a) System checks if the application needs underwriting. If any item (except the rejected item) in the application needs underwriting, the application needs underwriting and the application status changes to Pending Underwriting. For details about application underwriting, refer to About Customer Service Underwriting.
b) System checks if the application needs approval. If any item (except the rejected item) in the application needs approval, the application needs approval and the application status changes to Pending Approve. For details about application approval, refer to About Customer Service Approval.

8. System performs auto-offset for payment/collection amount if needed.

- Fee offset occurs when there are multiple payable or receivable records for one CS application with the same payee and same payment method.
- Net collection will be calculated on the same payment method and minus any available suspense (Policy Collection Suspense followed by General Suspense). Any amount used from General Suspense will be transferred to Policy Collection Suspense automatically.
- System checks if the application is with collection after auto-offset. If yes, perform Collection.

Rules for Add Rider

This section tells the rules in add rider.

1. When you select a benefit for adding a rider, and select the type of effective date for the added rider, the system does the following check:
    - Policy status should be in force.
    - Premium status of main benefit should not be “premium waived”.

- Benefit status should be “In Force”.
- Benefit premium status should be “Regular”.
- If selected effective type is immediately, the validity date should not exceed the selected benefit’s next due date.
- The added rider can be attached to the selected benefit according to product definition.
- The added rider can coexist with the existing riders whose status is not terminated.
- The added rider must be configured with “Attached Transaction Type”= New Biz and add rider, means the rider can be either NB attach or PS attach, otherwise, the rider is not allowed to add.
- The added rider can not be attached more than once if <No. of Attachment Allowed = Attach only once> according to product definition.
- The added rider’s indicator: “Attached Product SA not equal to Parent SA” is “NO” which defined in ***Product Definition >> Relationship Matrix*** , then the rider’s SA must be same as the parent’s SA.
- Validate the rider’s “Min/Max Rate Allowed for Rider SA Against Parent SA” in Product Definition, when the new riders’ SA against the “Min/Max Rate… ”, system popups the error message to block the process.
- Validate if the new rider’s “Sum of Rider SA not Greater than parent SA ” is **Yes** in Product Definition, if so, continue to validate the total SA of the new rider and existing inforced or attaching riders’ SA (other riders’ indicator also is Yes) with main benefit’s or parent benefit’s SA. If sum of riders’ SA (not include SA of other riders with indicator= No) is greater than main benefit’s or parent benefit’s SA, system popups the error message to block the process.
- Validate if calculated policy year has exceeded the “Attach Product Allow Policy Year”,if so, system pops up a warning message.

note

Calculation for policy year refer to following “Calculation Rule”.

- Validate if calculated remaining policy year (based on expired date) has within the “Attach Product Allow Remaining Policy Year”,if so, system popups a warning message.

note

Calculation for remaining policy year refer to following “Calculation Rule”.

- If the effective date type of the added rider is last due date, next due date or immediately, the rider must be a non-SV benefit as defined by product
- If rider’s expiry date greater than the Master Product’s, check fails.
- Check if the product can be sold, if not, check fails.
- Check if there are waiver product under the policy and waiver type is “Waive Policy”, if yes, the waiver will be auto attached to the newly added rider.
- If new rider a additional benefit rider, system validates the following rules to create WOP.
- If policy already has valid WOP and Waiver Type= Waiver Policy, system creates new WOP record for new rider automatically. The WOP’s coverage term is calculated by formula *[CalcPayerBenefitTerm]{.underline}* automatically, using Min (Waiver’s max cover end age - insured entry age, waived product’s charge year - policy year + 1).
- If policy already has valid WOP and Waiver Type= Waiver By Product, system doesn’t create new WOP record for new rider accordingly.
- System validates if the waived benefit has premium amount, if not, system doesn’t allocate the WOP for this benefit automatically.
- If rider’s life assured should be policy holder’s spouse, if not, check fails.

note

This check applies if added rider is a waiver and spouse waiver indicator is Y.

- If rider’s life assured should be the policy holder, if not, check fails.

note

This check applies if added rider is a waiver and policy holder waiver indicator is Y.

- Policyholder is not bankrupted.
- It is an ILP (Investment Linked Policy) and the policy has no potential lapse date or projected lapse date.
- It is an ILP and the policy has no misc. debts.
- Check if it is a ILP policy to add UDR and:

a) Policy does not have pending fund transactions.
b) Check's riders next due date is no later than UDR charge due date.
c) Validates that Validity date is not later than MDD.

- For main product with indexation, the new WOP rider can be added from commencement date, immediately and next due date and the WOP will be mandatory indexation automatically.

a) If add WOP from commencement date, system creates the initial segment SA and indexation segment SA for WOP rider which follows the main benefit's segment schedule and calculate the pro rate premium from each segment validate date to next premium due date.
b) If add WOP Immediately, system creates the initial segment SA and indexation segment SA for WOP based on segment premium and calculate the prorate premium from CS validity date to next due date.
c) If add WOP from next due date, system creates the initial segment SA and indexation segment for WOP based on segment premium and no collection premium calculated.

2. Calculation Rules:

- Calculate premium and interest to be collected.

Table 36 Add Rider - Collection Calculation

Effective type	**Rider Commencement Date**	**Rider Entry Age**	**Rider Next Due Date**	**Collection Calculation**
From commencement date	Main plan's commencement Date.	Same as the main benefit.	Main plan's Next Due Date.	Premium + Interest from commencement

Effective type	Rider Commencement Date	Rider Entry Age	Rider Next Due Date	Collection Calculation
				date to next due date.
Immediately	CS validity date.	Based on policy anniversary before actual Validity Date.	Main plan's Next Due Date.	Premium + Interest from validity date to next due date.
From next due date	Main plan's next due date.	Based on policy anniversary before main benefit's NDD.	Main plan's Next Due Date.	No collection.
From next anniversary date	Main plan's next anniversary date.	Based on policy next anniversary date.	Policy's Next Anniversary Date.	No collection.

Table 37 Add rider — age basis

Age Basis Type of New Rider	Case Description
Age Next Birthday	Policy Commencement Date=2023/10/01; LA DOB=1998/05/09; NDD=2025/10/01; Main Plan: Entry age@ inception=26; Coverage term= Cover to Age 50; Expiry Date= 2023/10/01+(50-26) =2047/09/30; Add Rider on 2025/08/12(Actual Validity Date); Entry Age@ Rider Effective Date=28; Coverage Term= Cover to Age 50; Expiry Date= 2024/10/01+(50-28) =2046/09/30; Previous calculated entry age= age (2024/10/01-1998/05/09) = 27 years; Current calculated entry age= age (2025/08/12-1998/05/09) = 28 years

Age Basis Type of New Rider	Case Description
Age Nearest Birthday(Day)	Policy Commencement Date=2023/10/01; LA DOB=1998/05/09; NDD=2025/10/01; Main Plan: Entry age@ inception=25; Coverage term= Cover to Age 50; Expiry Date= 2023/10/01+(50-25) =2048/09/30; Add Rider on 2025/08/12(Actual Validity Date); Entry Age@ Rider Effective Date=27; Coverage Term= Cover to Age 50; Expiry Date= 2024/10/01+(50-27) =2047/09/30; Previous calculated entry age= age (2024/10/01-1998/05/09) = 26 years; Current calculated entry age= age (2025/08/12-1998/05/09) = 27 years

Table 38 Add rider — effective type

Effective Type	Calculation Rules - Policy Year	Calculation Rules - Remaining Policy Year
From Commencement Date	Current business date - Policy Commencement date	Policy Expiry date - Current business date
From Next Due Date	Next Due Date - Policy Commencement date	-
From Next Anniversary Date	-	-
Immediately	CS Validity date - Policy Commencement date	Policy Expiry date - CS Validity date

Rules for Apply Policy Loan

This section tells the rules in Apply Policy Loan.

1. When you click **Apply Change**, system perform below validations:
    - The policy status is inforce.
    - The policy does not have the potential lapse date.
    - Policy is not frozen.

- If the policy is investment linked, it should not have any pending fund transaction.
- Policy Loan is allowed.

2. Loan information validation:
    - Loan amount is not greater than net available amount.
    - Loan date (Validate date) cannot be backdated. It can be forward dated up-to 7 days from system date.
    - Loan date is not more than X days from valuation date of main benefit.

note

X days is the contractual grace + additional grace period defined in product.

- Loan date is not less than latest interest calculation date.
- Policy is not Frozen by CS or Claims.

Rules for Cancellation (Void Policy)

This section describes how to cancel a policy or cancel the selected benefits under a policy.

1. When you select a benefit and click a type of effective date: the system performs the following validation checks. If any check fails, the corresponding error message will be displayed.
    - Benefit status should not be Terminate.
    - If the main benefit is selected, all the related riders with benefit status not equal to Terminate must also be selected.
    - System validates the benefits relationship.
    - When there are waivers with Lapsed or Inforce risk status, all non-waiver benefits with premium status Regular and risk status Inforce should have these waivers attached, if these waivers are qualified to be attached.
    - If selected effective type= Immediately, the entered Validity Date must be greater than the benefit commencement date, if not, system popups error message when apply change.

2. When you click **Submit** on the Surrender/Cancellation Reason Entry page, the system performs the following validation checks. If any check fails, the corresponding error message will be displayed.
    - Lapse date must be greater than the benefit commencement date.
    - If the number of completed product years is less than 2, the system calculates GSV at product level. If GSV is less than 100, it will not be zeroed but displayed as 0 and treated as 0 for customer service processing.
    - If cancellation effective type is from commencement date, benefit should not have SB or CB.
3. If users select to cancel the whole policy. After clicking **Calculate**, system calculates the Fee details based on "Rescinding Option" in main product and display the result on the screen.
    - Whether show A or B depending on configuration of main product：

a. For ILP: It will be configured as "B: Refund TIV+Charge", following description of B in "Net Payable" filed in below table.
b. For Trad: it will be configured as "A: Refund Premium", following description of A in "Net Payable" field in below table.

- For all auto calculated fields, if the calculation result is 0, display the value as "0.00" instead of blank.
- For all editable and non-auto calculated fields, no default value and display the value as blank.

Table 39 Cancellation - calculation rules

Fee	Auto Calculate	Editable	Description
Total Premium Paid	Yes	No	1. Total Premium Paid including policy fee if any (without interest) of this policy including riders, no matter paid by which way, such as client pay, waived, tolerance, APL, Dividend and so on. 2. If change from commencement date, total premium paid from commencement date.

Fee	Auto Calculate	Editable	Description
			3. If change from immediately, total premium paid after validity date 4.Total Premium Paid=Total Premium applied already - Total Premium Refund already.
Fund Account Value	Yes	No	Display Policy Fund Account Value.
Premium Allocation Charge Deducted	Yes	No	Premium Allocation Charge that have been deducted for this policy, including both deducted from premium and deducted from fund account value of any.
Policy Fee Deducted	Yes	No	Admin Charge(Policy Fee) that have been deducted for this policy.

Miscellaneous Debts	Yes	No	Miscellaneous Debts generated in charge deduction.
Partial Withdraw(Net Amount)	Yes	Yes	Partial Withdraw Amount exclude withdraw charge, calculate only for VL(ILP) Policy. This field will be shown only if main product is configured as “A”
Partial Withdraw Charge	Yes	Yes	Partial Withdraw charge, calculate only for VL(ILP) Policy. This field will be shown only if main product is configured as “A”.
Medical checkup Fee	Yes	Yes	Total Medical Check Fee of this policy.
Waived Premium	Yes	No	Total Premium Waived of this policy including riders.
Bonus Paid Claw back	No	Yes	Input by user manually.
SB Paid Claw back	No	Yes	Input by user manually.
Other Claim Payable	No	Yes	Input by user manually. Will list all products of this policy and allow user key in Claim Payable per product.

Fee	Auto Calculate	Editable	Description
Other Payable Claw back	No	Yes	Input by user manually.
Net Payable	Yes	No	Net Payable=A or B +Suspense + APA+ CB Balance -Policy Loan-APL- Miscellaneous Debts-Partial Withdraw (Net Amount)-Partial Withdraw Charge- Medical Checkup Fee-Waived Premium-Bonus Paid Claw back-SB Paid Claw back- Other Claim Payable-Other Payable Claw back, Where A= Total Premium Paid; B= Account Value(depends on user selection)+ Premium Allocation Charge Deducted + Policy Fee Deducted + Insurance Charge Deducted+ Partial Withdraw Charge+ Fund Switch Fee+ Rider Premium Paid.

4. If user only cancel the rider, only show fee list as below:

Table 40 cancel rider rules

Fee	Auto Calculate	Editable	Description
Rider Premium Paid	Yes	No	Total Premium Paid (without interest) of all cash riders, no matter paid by which way, such as client pay, waived, tolerance, APL, Dividend and so on.
Waived Premium	Yes	Yes	Total Premium Waived of selected riders. Will list all selected products to be cancelled allow user key in Claim Payable per product.
Other Claim Payable	No	Yes	Input by user manually.
Other Payable Claw back	No	Yes	Input by user manually.

Fee	Auto Calculate	Editable	Description
Net Payable	Yes	No	Net Payable= Rider Premium Paid- Waived Premium-Other Claim Payable-Other Payable Claw back

5. When you click **Apply Change** on the Cancellation page, system calculates the amount to refund. The total amount to refund varies with the effective type, as described in the following table:

Table 41 Cancellation — effective type

Effective type	Refund Amount	Premium Calculation Start Date	Premium Calculation End Date
From commencement date	Total premiums collected — total tolerance amount - total discount premium	Benefit Commencement Date	Next Due Date
Immediately	Pro-rated premium	Validity Date	Next Due Date

6. After whole policy is cancelled, system updates the policy data as below:

    - System updates benefit/policy status, Termination Date and Terminate Reason.

a. Set benefit/ policy status to be “Terminated”.
b. Set “Terminate Reason”= Selected Cancellation Reason.
c. If cancel from Commencement Date, set “Termination Date”= Policy Commencement Date.
d. If cancel from Immediately, set “Termination Date”= Validity Date entered by users.

- For ILP policies, system clears Policy Fund Account Value and generates the pending withdraw transactions. After fund price entered, system confirms the pending transactions and generate the payable records.
- For Traditional policies, system generates the payable records for premium refund.

- If the policy has suspense amount, the suspense refund amount can't be edited in application entry and system doesn't generate the payable records for suspense refund. User should go to Payment Requisition to refund botch suspense and premium.
- If there's any tolerance amount collected and waived by insurer, system should minus the tolerance amount in the payment amount calculation.

7. If cancel the cash rider only, system updates the benefit data as below:
    - System updates rider benefit status, Termination Date and Terminate Reason.

a. Set benefit/ policy status to be "Terminated".
b. Set "Terminate Reason"= Selected Cancellation Reason.
c. If cancel from Commencement Date, set "Termination Date"= Policy Commencement Date.
d. If cancel from Lapse Date, set "Termination Date"= Validity date entered by users.
e. System generates the payable records for refund premium if any.

8. When the policy is with indexation feature and is voided from inception date, the system calculates and refund the total paid premium (including indexation premium) from inception date and updates all indexation segment status to be Terminated and cancel all pending billing records for all segment premium. The terminate date of segments is same as benefit's termination date.

Rules for Changing Assignment

This section describes the rules for changing assignment.

1. Conditions for policy/benefits:
    - The policy is NOT placed under trust. (The policy do not have trustee.)
    - The policy does NOT have any beneficiary.
    - The policy status is NOT terminated.
    - The policyholder can NOT be bankrupt.
    - Assignment is allowed for this policy based on product definition.

2. When you click **Apply Change** on the Change Assignment page, system perform below validations:
    - If the assignment type is No Assignment, there must be no assignee information entered; otherwise, there must be at least one assignee.
    - There must be changes made to either assignment type or assignees.
    - If the assignment type is Collateral Assignment, the collateral assignee can only be company. If the assignment type is Absolute Assignment, the absolute assignee can be either company or person.
    - If the assignment type is Official Assignment, the official assignee can be company or individual customer. System will default official assignee as refund payee (both premium refund and other refund), but users can change it via Change Payment Details when doing payment requisition.
    - If the new party is an existing customer in the system, the party should not be bankrupt.
    - All assignee must have an address attached.
3. If any of the following condition occurs, a warning message will be displayed. You can click **Continue** to proceed.
    - There is an inforce (inforce refers to benefit risk status) waiver benefit (PBR or WOP) attached and the policy is under assignment after change.
    - The assignment type is conditional assignment, but the conditional assignee is not a person.
    - The new party is an existing customer in the system and the party is an agent.
    - The assignee must not be Juvenile (below 18 years old).
    - The policy status is lapsed.

Rules for Changing Birth Date or Gender

This section describes the rules for changing birth date and gender.

1. Rules and Calculations:

- For Trad policy:
    - If old premium > new premium, system will generate the refund of premium difference from commencement date to next due date.
    - If old premium < new premium, system will generate the collection of premium difference from commencement date to next due date. The non-selected party is in read only mode.
- For ILP Policy:
    - System will calculate amount difference of previous monthly charge or COR.
    - If the new COI/COR > old COI/COR, system will generate pending fund transactions for the difference from commencement date to next charge due date.
    - The price used will follow the standard rule of T+N.

Rules for Changing Benefits

This section describes the rules for changing benefits.

1. In the new benefit dropdown list, only products which have configured under same operational category (parent category code: ChgBenfit) will be displayed.
2. When clicking **Change**, the system performs the follow validation checks. If any check fails, the corresponding error message will be displayed.
    - The original benefit status must be inforced. If not, pop up error message.
    - The original benefit premium status must be regular. If not, pop up error message.
    - If old have survival benefit(SB) feature, system prompts warning message: *The benefit has Survival Benefit, do you want to continue?*
3. When clicking **Save** after entering the new benefit information, the system performs the following validation checks. If any check fails, the corresponding error message will be displayed.

- New benefit code should be different from old benefit code. If not, pop up error message.
- If the original benefit is waiver, the new benefit should also be a waiver. If not, pop up an error message.
- The new benefit effective date is on or after the product launch date of new benefit and is still selling on the policy commencement date. If not, pop up error message.
- The coverage term and premium term of the new benefit cannot expire (new premium end date cannot be earlier than CS process date (system date), new coverage end date cannot be earlier than CS process date (system date)). If not, pop up an error message.
- The original benefit code should not have effective extra premium (extra premium end date>= Premium Due Date). If not, pop up an error message.
- If new benefit has survival benefit(SB) feature, system prompts warning message: *The benefit has Survival Benefit, do you want to continue?*
- If CS effective date= Next Anniversary Date, system checks if the next premium due date is equal to next anniversary date, if not, the system prompts an error message.

4. When clicking **Apply Change**, the system performs the following validation checks. If any check fails, the corresponding an error message will be displayed.
    - Benefit relationship must be valid according to product setup. If not, pop up error message. For example: The old rider can't be attached to the new basic plan, or new rider can't be attached to basic plan (old or new). or rider can't be not co-existed with other riders.
    - Dependency between benefits must be valid according to product setup. If not, pop up an error message. For example: rider SA should be multiple times greater than the main benefit; the benefit's entry age is greater than min or max entry age.
5. Collection/Refund Summary

- If CS effective date= Commencement Date, the new benefit takes effect from commencement date and system calculates the prorate collection or refund premium from commencement date until next premium due date.
- If the new premium is more than the original premium, the difference in premium plus the interest will be collected. Total amount to be collected = difference in premium of each due date + interest up to CS validity date.
- If the new premium is less than or equal to the original premium, no refund will be refunded.
- For waiver benefits, if the waived benefit premium is recalculated, the collection amount is calculated for waiver benefits accordingly.
- If CS change from next anniversary date, the system won't calculate any collection or refund premium. If there's pending billing records of old plan, the system will cancel the pending billing records after CS takes effect, then renew extraction batch will generate new pending billing records of new plan.

6. Bonus related information
    - If the new benefit code has SB feature, the system recalculates SB payment start date and SB next due date. If the new benefit code has no SB feature but the old benefit code has SB feature, the system clears payment schedule.
    - If the new benefit code has Reversionary Bonus(RB) feature, the system sets RB to 0 and updates RB due date to benefit commencement date plus one year. If the new benefit code has no RB feature but the old benefit code has RB feature, the system sets RB to 0 and clears bonus due date.

Rules for Changing Beneficial Owner

This section describes the rules for changing beneficial owner.

- If there is original beneficial owner already, users can click **Delete** to remove the beneficial owner or click **Edit** to change beneficial owner relationship only.

- There is not validation if users added multiple beneficial owners on policy. The beneficial owner won't affect other party roles on policy.

Rules for Changing Contact Information

This section describes the rules for changing contact information.

1. When you select **Policy Holder** or **Life Assured** and Click **Edit**,
    - The contact information is displayed in edit mode for modification.
    - The non-selected party is in read only mode.
2. When you click **Apply Change** on the Change Contact Information page, system save the modified contact information and set the alteration item to completed.

Rules for Changing Discount Type

This section describes the rules for changing discount type.

1. When you change the discount type:
    - If the benefit's premium calculating method is manual, it should not have any premium discount.
    - The new discount type must be allowed according to product setup.
    - When the discount type is changed, the related discount rates will be automatically changed according to the discount rate table set up for product. System will collect the premium or charge with the new discount rate from next due date.
    - The system updates the benefit information and recalculates the benefit premium (including current and next due premium). If there are waiver benefits attached to the policy, all waiver benefits information of the policy will be recalculated.
2. The discount type is changed for all the benefits under the policy.

Rules for Changing Disbursement Method

This section describes the rules for changing disbursement method.

1. Precondition:
    - Policy status is NOT "Terminate".

2. Rules:
    - If the new disbursement method is **PayNow**, and there is no correct ID No. on refund payee, system popups an error message to inform users.

Rules for Change HPS Exemption Information

This section describes the rules for change HPS Exemption Information. HPS refers to the Singapore market specific **Home Protection Scheme.** It is a type of insurance plan that protects insured from losing Housing and Development Board flat in the event of death, terminal illness or total permanent disability. Customers may apply to be exempted from the Home Protection Scheme (HPS) if his/her private insurance coverage is enough to cover outstanding housing loan against death, terminal illness (TI) and total permanent disability (TPD).

In change HPS Exemption information users can:

- Allow to change the HPS Exemption Indictor.
- Allow to change the HPS Exemption Start Date.
- If the HPS Exemption Indicator= A-Approved, the Start Date is mandatory input.
- If the HPS Exemption Indicator= Blank (Please Select), system gray off and clear start date.
- If the HPS Exemption Indicator= A-Approved, when registering other POS transactions, system should pop up a warning message.

Rules for Change Indexation Information

This section describes the rules for change indexation information.

3. If the benefit does not have indexation feature, the benefit cannot be displayed in PS Data Entry.
4. If the indexation indicator changed from **Yes** to **No**, system will cancel all pending indexation billing and recreate new renewal billing, change the indexation status to non-indexation, and update the installment premium fee record.
5. If the indexation indicator changed from **No** to **Yes**, the indexation will take effect from next anniversary date. If there's pending renewal extraction

records for next anniversary date renewal, system will cancel the pending renewal extraction records and indexation billing, and then recreate new renewal extraction records and indexation billing.

6. The new indexation option will effect from the next policy anniversary date.
7. If waiver is attached to the indexation benefit, when waived product's indexation indicator changed, the waiver's indexation indicator should be changed accordingly.
8. Once the indexation indicator changed to **No**, system remove the Indexation Type and Indexation calculation basis from benefits.

Rules for Changing Occupation

This section describes the rules for changing occupation.

1. Precondition:
    - The matrix relationship between occupation code and occupation class has be set up in the system
    - Policy status is inforced and products status are inforced.
    - The benefit is related with occupation.
2. When you click **Apply Change**,
    - System will update the new occupation code to all benefit related to the life assured under the policy, the new occupation code same as the new occupation code changed at party level.
    - The alteration has three effective types, which are change occupation class from commencement date, Immediately and from next due date.
    - After the submission of the change, system saves the new occupation code and new occupation class at benefit level.
    - For traditional policy, system will recalculate the premium.
    - If there are waivers on the policy, the system recalculates all waiver benefits information such as SA waived and waiver premium accordingly. Collection/Refund is only required for those attached to changed benefit, that is, benefits in which the occupation is changed.

The effective type of these waivers will follow the changed benefit's effective type.

Table 42 Change Occupation - Traditional policy - Collection/Refund

	From commencement date	**Immediately**	**From Next Due Date**
New premium > Original premium	Collect premium difference and interest from commencement date to next due date.	Collect premium difference and interest from CS validity date to next due date.	NA
New premium < Original premium	Refund premium difference from commencement date to next due date.	Refund premium difference from CS validity date to next due date.	NA

- For UL policy, system will calculate the new COI/COR.

Table 43 Change Occupation - UL policy - Collection/Refund

	Immediately	**From next charge due date**
New COI/COR > Original COI/COR	New COI effective from next charge due date.	New COI effective from next charge due date.
New COI/COR < Original COI/COR	New COI effective from next charge due date.	New COI effective from next charge due date.

- Amount to collection is calculated according to below rule:

Table 44 Change Occupation - Amount to Collect

Amount to collect	**Types of Effective Date**
Modal premium difference	No collection if it is unit-linked main plan or unit-deduction rider. Otherwise, collect based on the following start and end date. **Start date:** Benefit Commencement Date. **End date:** Waiver start Date if premium status = "Premium waived" and waiver starts date exist; Otherwise Next Due Date.

Amount to collect	Types of Effective Date
	Modal premium difference: using new current information and original current information to calculate.
Interest Up to Validity date	No collection if it is unit-linked main plan or unit-deduction rider. Otherwise, collect based on the following start and end date. ∑(Interest of each Modal) premium difference. **Modal premium difference:** using current new premium and current original premium to calculate. **Start date:** each premium difference due date. **End date:** validity date.

- Amount to refund is calculated according to below rule:

Table 45 Change Occupation - Amount to Refund

Amount to Refund	Types of Effective Date
Modal premium difference	No refund if it is unit-linked main plan or unit-deduction rider. Otherwise, refund based on the following start and end date. **Modal premium difference:** using new current information and original current information to calculate. **Start date:** Benefit Commencement Date. **End date:** Waiver start Date if premium status = "Premium waived" and waiver starts date exist; Otherwise Next Due Date.

**The number of days for each payment frequency is fixed:*

Payment Frequency	***Days***
Yearly	*365*
Half Yearly	*183*
Quarterly	*91*
Monthly	*30*

Rules for Change of Benefit Level (Health)

This section describes the rules for change of benefit level for health policy.

1. After change is applied, the system updates the benefit information, such as Sum Assured, Installment Standard Premium and Installment Extra Premium based on new benefit plan.
2. Calculation rules:
    - System calculates the prorate collection or refund premium based on selected type of effective date as described in following table:

Type of Effective Date	Amount to be collected or refunded	New Plan Effective Date
Immediately	Difference in premium from validity date to next due date (including GST if applicable).	CS Validity Date.
From Next Due Date	None.	Next Premium Due Date.

- If there are waivers on the policy, the system recalculates all waiver benefits information such as SA waived, annual amount waived and waiver premium.

Rules for Changing Payment Frequency

This section describes the rules for changing payment frequency.

1. Pre-conditions:
    - The policy risk status should NOT be terminated.
    - At least one product of the policy is regular premium.
    - There is no PLD for UL policy.
    - Payment Frequency should be allowed for all the benefits with non-terminated status and premium status is not fully paid-up (except Unit Deduction Rider) based on the allowable payment frequency set up by Product.
    - For all “Inforce” products, if premium status = “premium waived”, waiver end date should coincide with any new frequency installment due date.
    - There is partial APL raised.
    - ILP Policy: Premium Due Date should coincide with new payment frequency.

2. Calculation rules:

    - From low frequency to high frequency (e.g., from yearly to monthly).

a) The new frequency will take effect from next due date.
b) No collection required.

    - From high frequency to low frequency (e.g., from monthly to yearly).

a) Collection amount = Installment premium before change * No. of installment between original NDD before change and new NDD after change.

3. Rule for policy with indexation feature:

    - For main product with indexation, the new WOP rider can be added from commencement date, immediately and next due date and the WOP will be mandatory indexation automatically.

a) If add WOP from commencement date, system creates the initial segment SA and indexation segment SA for WOP rider which follows the main benefit's segment schedule and calculate the pro rate premium from each segment validate date to next premium due date.
b) If add WOP Immediately, system creates the initial segment SA and indexation segment SA for WOP based on segment premium and calculate the prorate premium from CS validity date to next due date.
c) If add WOP from next due date, system creates the initial segment SA and and indexation segment for WOP based on segment premium and no collection premium calculated.

Rules for Changing Payer

This section tells the rules for changing payer.

1. When you use a new payer to replace the old one:

    - The new premium payer must be above 21 years of age.
    - If the new premium payer is an existing party in system, the party must not be bankrupt.
    - There must be an address selected for the new premium payer.
    - For DDA payment method, the account information must be entered.

Rules for Changing Payment Method

This section describes the rules for changing payment method.

1. Precondition:
    - Policy status is NOT “Terminate”.
2. Rules:
    - The new payment method must be an allowable one according to the original payment method.
    - If the new payment method is **Credit Card**, the expiry year of credit card must not be earlier than the current system year.
    - If the new payment method is **Credit Card**, the card numbers must not be all zeros.

Rules for Changing Policyholder

This section describes the rules for changing policyholder.

1. Precondition:
    - The policy is not an issue without premium policy.
    - The policyholder must be a person, not an organization.
2. Rules:
    - The policy holder must not be Juvenile (18).
    - The policy holder must be with address.
    - If the new policyholder is an existing customer in the system, he or she must not be bankrupt.
    - The original policyholder must be changed to a different person.

Rules for Changing Survival Benefit or Cash Bonus Option

This section describes the rules for changing survival benefit or cash bonus option.

- If selecting **To receive SB/CB in cash** either in **Cash Bonus Option or Survival Benefit Option**, the field Disbursement Method will be enable to edit. Otherwise it is non-editable.
- If the disbursement method is Direct Debit, and there is no account selected, system popups an error message to inform users.

Rules for Changing Smoker Status

This section describes the rules for changing the smoker status of life assured.

1. When **Apply Change:**
    - System will update the smoke status to all benefit related to the life assured under the policy.
    - System will update the smoke status in party level also.
    - If the premium for products under the policy are related to smoke status, premium will be re-calculated.
    - Generate collection or refund according to effective type.
    - For traditional policy (include rider under UL and ILP policy), system calculates according to below rule:

Table 46 Change Smoker Status - Traditional policy - Collection/Refund

	From commencement date	**Immediately**
New premium > Original premium	Collect premium difference and interest from commencement date to next due date.	Collect premium difference and interest from validity date to next due date.
New premium < Original premium	Refund premium difference from commencement date to next due date.	No refund.

- For UL and ILP policy, system calculates according to below rule:

Table 47 Change Smoker Status - UL and ILP policy - Collection/Refund

	From commencement date	**Immediately**
New premium > Original premium	Collect premium difference and interest from commencement date to next due date.	New premium effective from next due date.
New premium < Original premium	No refund.	New premium effective from next due date.

	From commencement date	Immediately
New COI > Original COI	System will generate the pending fund transaction for the COI/COR difference at each previous monthly charge due date.	New COI effective from next charge due date.
New COI < Original COI	No pending fund transaction will be generated.	New COI effective from next charge due date.

2. Calculation rules:

Table 48 Change Smoker Status - Amount to Collect

Amount to Collect	Types of Effective Date
Collect premium difference	No collection if it is unit-linked main plan or unit-deduction rider. Otherwise, collect based on the following start and end date. **Modal premium difference:** using current new premium and current original premium to calculate. **Start date:** benefit Commencement date. **End date:** waiver start date if premium status is “Premium waived” and waiver start date exists; Otherwise benefit next due date. **Premium frequency:** benefit premium frequency.
Interest Up to Validity date	No collection if it is unit-linked main plan or unit-deduction rider. Otherwise, collect based on the following start and end date. ∑(Interest of each Modal premium difference). **Modal premium difference:** using current new premium and current original premium to calculate. **Start date:** each premium difference due date. **End date:** validity date.

Table 49 Change Smoker Status - Amount to Refund

Amount to Refund	Types of Effective Date
Difference in Premiums (refund)	No refund if it is unit-linked main plan or unit-deduction rider. Otherwise, refund based on the following start and end date. **Modal premium difference:** using current original premium and current new premium to calculate.

Amount to Refund	Types of Effective Date
	Start date: benefit Commencement date. **End date:** waiver start date if premium status is 'Premium waived' and waiver start date exists; Otherwise benefit next due date. **Premium frequency:** benefit premium frequency.

Rules for Changing Term

This section describes the rules for changing terms.

1. When you click **Apply Change**, the system performs the following validation checks. If any check fails, the corresponding error message will be displayed.

- If the policy is not in the first policy year, system will prompt an error message: *Policy should be within first policy year.*
- Benefit status must be Inforce or Lapse.
- For non-MDT product, premium status must be Regular.
- For MDT product, premium status must be Regular or Fully paid.
- For each benefit, only the following fields can be changed:
    - Coverage Term
    - Premium Term
- Premium type cannot change from single premium to other premium type, or from other premium type to single premium.
- The cessation date of any rider should not be later than the cessation date of the main benefit.
- The benefit must be within the coverage period (using application date to check), that is, the application date should not exceed the new risk cessation date.
- The regular premium benefit, the benefit must within the payment period (using application date to check), that is, the application date should not exceed the new premium cessation date.
- If the benefit status is Lapse, it cannot be changed to a longer term. This is applicable to both premium term and coverage term.

- For ILP benefit, the premium calculation method must be agreed.
- After changed, the risk cessation date, paid up date, and premium status have to be re-derived.
- The system recalculates the premium discount rate based on revised information.
- The system recalculates the policy fee based on revised information.
- The system recalculates the revised current and revised next premium.
- If there are waivers on the policy, the system recalculates all waiver benefits information such as SA waived, annual amount waived, large annual benefit discount, and waiver premium.
- The system keeps old benefit details, saves and displays modified benefit information.

2. Rules on the Modify Collection/Refund page,
    - For waiver benefits, collection or refund is calculated if there is a change in term on the waiver itself or if the waiver is attached to the benefit where term information is changed. Waivers that are not attached to the changed benefits but waiver premium is updated due to large annual benefit discount will not require collection or refund.
    - If it is a unit-linked main plan or unit-deduction rider, no premium collection or refund will be calculated. Calculation of insurance charge on next policy fee date will be based on revised term.
    - If the new premium is more than the original premium, the total collection includes the following:

Table 50 Change term - calculations for collection

Amount to Collect	**Non MDT Benefit**	**MDT Benefit**
Collection Premiums	Difference in Premiums: **Modal premium difference:** using current new premium and current original premium to calculate.	Pro-rated Difference in Premiums: (if product table is not defined to use ST table) **Modal premium difference:** using current new

Amount to Collect	Non MDT Benefit	MDT Benefit
	Start date: benefit inception date. **End date:** benefit next due date. **Premium frequency:** benefit premium frequency.	premium and current original premium to calculate. **Start date:** Validity date. **End date:** next due date. **Premium frequency:** benefit premium frequency.
(Plus)Interest up to validity date	∑ (Interest of each Modal premium difference): **Modal premium difference:** using current new premium and current original premium to calculate. **Start date:** benefit inception date. **End date:** waiver start date.	None.
(Plus)GST or ST (if applicable)	Need to be calculated.	Need to be calculated.

- If the new premium is less than the original premium, the total collection includes the following:

Table 51 Change term - calculations for refund

Amount to Refund	Non MDT Benefit	MDT Benefit
Refund Premiums	None.	Unexpected premium (if product table is not defined to use ST table). **Modal premium difference:** using current new premium and current original premium to calculate. **Start date:** Validity Date. **End date:** Next Due Date.
(Plus)Interest up to validity date	None.	None.

Amount to Refund	Non MDT Benefit	MDT Benefit
(Plus)GST or ST (if applicable)	None.	Need to be calculated.

Rules for Decreasing SA

This section describes the rules for decreasing SA.

1. Pre-conditions:
    - Policy status should be in-force or lapse.
    - For mortgage product, benefit status must be in-force. For other products, benefit status should be in-force or lapse.
    - For mortgage product, premium status should be regular or fully paid; For other product, premium status for this benefit should be regular.
    - Policy should not have potential lapse date.
    - Should not be a decreasing term product or increasing term product.
    - The Benefit should be allowed for decreasing SA which is predefined in product definition.
2. When you click **Apply Change** to save the new SA, follow these rules listed below:
    - New SA or units should be less than original SA or units.
    - New premium should be less than original premium.
    - Current and next SA will be updated with new SA.
    - Recalculates current and next premium of benefit after change.
    - SA should be equal to or more than minimum SA defined in product SA limit table setup.
    - System reduces RB by the corresponding SA amount surrendered. This is done using the following formula. The result is round to next cents.
    - New RB = original RB * ((original SA - reduced SA) / original SA).

- For all benefits that satisfy the above conditions and having manual SV calculation indicator = “N”, the difference between Sum (benefit GSV) and Sum (benefit Actual GSV) is less than or equal to X.

note

X is a parameterize value.

- If there is at least one benefit satisfies the above conditions with premium status = regular or premium waiver, the difference between validity date and system date should not more than 30 days.

note

30 days is the contractual grace period + additional grace period defined in product.

- If there is at least one benefit satisfies the above conditions with premium status not equal to regular nor premium waiver, validity date can be backdated up to 7 days but cannot be greater than system date.

note:

7 days is a parameterized value.

- For riders, if the rider’s indicator: “Attached Product SA not equal to Parent SA” is **NO** which defined in ***Product Definition >> Relationship Matrix*** , then the rider’s SA must be same as the new parent’s SA when the parent product’s SA is decreased.
- For mortgage products, system calculates the revised initial sum assured using the formula: Revised Initial SA = trunc (Remaining SA* Original Initial SA/New Actual SA,0).

a. Remaining SA will be defaulted to be Current Actual Decreasing SA but is editable. Currently Actual Decreasing SA will be retrieved from SA schedule for the current policy year.

b. New Actual SA for the current policy year will be calculated based on original MDT initial SA, interest rate for mortgage and mortgage term.
c. The new remaining sum assured must be greater than 0.

- System checks the “Decrease SA Allow Policy Year” of the benefit which is predefined in Product Definition >> CS Rules, the “related

policy year" can not be allowed to exceed the "Decrease SA Allow Policy Year" , the calculation rules for "related policy year" as follows:

a. If the effective date = "From Commencement date", system uses the current business date to calculate the policy year;
b. If the effective date = "Immediately", system uses the CS Validity Date to calculate the policy year;
c. If the effective date = "From Next Due Date", system uses the Next Due Date to calculate the policy year.
d. For indexation policy, after Increase SA, system will insert a new segment record for new increased SA.

- Segment Amount = ew total SA - Original total SA
- Record new segment Id and insert the initial segment as master segment Id.
- Set segment validate date based on effective option of Increase SA.
    - If effective option = From Commencement Date, new segment effective date = Commencement Date.
    - If effective option = Immediately, new segment effective date = CS Validity Date.
    - If effective option = From Next Due Date, new segment effective date = Next Due Date.
- System calculates the entry age of new segment by age of segment validate date.
- System sets up the segment type as Segment by Increase SA.
- System calculates the campaign amount for new increased segment SA.
- If a premium discount is available at the inception of the policy, revised premiums due to Increase SA option activation in the subsequent policy year will also have the same discount.
- If increase SA from commencement date, the difference in premium from commencement date to next due date will be collected.

- If increase SA Immediately, the difference in premium from CS Validity Date to next due date will be collected.
- If increase SA from next due date, there's no premium need to be collected and segment status is inforce directly.
- If policy has waiver, the waiver SA and premium will be updated accordingly. System will record the new waiver segment Id and master segment Id (new increased segment) relationship.
- System will cancel the pending indexation records and recreate the new renewal billing (inforce SA part, increase SA part and indexation part) according to new policy and benefit SA and premium information.

3. Calculation rules:

- Policies with Cash Value

Formula	Amount=SV-SV' - Policy Loan - APL SV: Surrender Value before change (Calculated based on next due date and validity date) SV': Surrender value after change (Calculated based on next due date and validity date)

note

If selected benefit's Surrender option = "Trigger SV formula only" or "Trigger unexpired premium or SV formula calculation" but GSV>0, the allowed effective type is "Immediately" only, if user selects other effective type (Commencement Date or Next Due Date), system popups an error message.

- Policies Without Cash Value

Table 52 Decrease SA - Amount to Refund for Policies without Cash Value

Amount to Refund	**Types of Effective Date**		
-	From Inception.	Immediate.	From next due.

Amount to Refund	**Types of Effective Date**		
Refund Premium Factors	Modal premium difference: using current new premium and current original premium to calculate.	Modal premium difference: using current new premium and current original premium to calculate.	None.
-	Start date: benefit inception date.	Start date: Validity Date.	None.
-	End date: benefit next due date.	End date: Next due date.	None.
Refund Premium Calculation Formula	Modal premium difference * No. of installment(from commencement date to next due date).	Modal Premium Difference * “m” days/No of days * (premium frequency).	None.
-	-	• “m” days = Number of days from Start Date to the End Date less 1 day (Note: Number of days is from Start Date to End Date, including the Start Date but excluding the End Date).	None.
-	-	• No of days* depends on current benefit premium frequency: o Monthly 30 days. o Quarterly 91 days. o Half-yearly 181 days. o Yearly 365 days. o Single Premium Actual number of days from Risk Commencement Date benefit to Coverage Cessation Date less 1 day.	None.

note

If selected benefit's Surrender option = "Trigger unexpired premium or SV formula calculation" but GSV=0, the allowed effective types are "Commencement Date", "Immediately" and "Next Due Date", if from "Next Due Date", there's no refund premium calculated.

Rules for Delete Rider

This section tells the rules in delete rider.

Precondition:

- The policy is without indexation.
- Policy status is Inforce or lapse.
- Policy has riders.
- Policyholder is not bankrupted.

Rules:

- Validity date is available in UI when only Delete Rider immediately option is selected.
- If you select a unit deduction rider, the Delete Cash Rider will be disabled. If you select a cash rider, the Delete Unit Deduction Rider will be disabled.
- If Delete Rider immediately is selected, both cash rider and UDR are available to select from rider list.
- If Delete Rider from Next Due Date is selected, disable UDRs from the rider list.
- If waived product is selected from the rider list, the related waiver will be automatically selected.
- When user untick any rider from rider list, system need automatically unstick attached waiver.
- If untick waiver product, waived product will NOT be unticked.
- If user switch Delete option (Immediately or Next Due Date), selected Riders will be cleared and rider list is refreshed per selected delete option for user to re-select.
- Cancel Reason is updated to CS Item level.

- Validate whether the selected rider is compulsory rider (one of **Type of relationship** defined in Product Definition") or not, system pops up an error to block the process.

Calculation rules:

Table 53 Delete Rider - Refund Rules

Rider by Status	Delete Rider Immediately	Delete Rider from Next Due Date
Unit deduction rider (inforce or with PLD or Lapse)	• No refund. • Termination Date = NDD.	Disable.
Cash Rider(Inforce without PLD)	• Refund Amount = **Pro-rated premium from CS Validity date to next due date**. • Termination Date = CS Validity Date.	No Refund Termination Date = NDD.
Cash Rider (with PLD)	• No refund. • Termination Date = PLD.	Disable.
Cash Rider(Lapsed)	• No refund. • Termination Date = Lapsed date.	Disable.

Rules for Freelook

This section tells the rules in freelook for traditional policy.

Validation and business rules:

- Policy/benefit status cannot be "Terminated".
- CS validity date should within Free Look period end date. Free Look period end date calculation is as below:
    - If acknowledgement date is not blank: Free Look period end date = acknowledgement date + free Look period (Product Define).
    - If acknowledgement date is blank: Free Look period end date = dispatched date + free Look period + 7 days.

    - If both acknowledgement date and dispatched date are blank: Free Look period end date = issue date + free Look period.
- There should be no claims paid out under this benefit.
- For Traditional and UL policy, refund amount per Freelook benefit = original benefit totals premium (using current total installment premium to calculate) from benefit commencement date to next due date.
- For ILP policy, refund amount = Total units * Fund Price at (validate date + 1 day) + bid offer spread + insurance charge of the main benefit + unit deduction rider's premium - miscellaneous debts - Freelook charge - Recurring charge - Stamp duty - Capital Gain tax - Medical billing.

Calculation:

- If the main benefit is not terminated under Free Look, calculate premium refund for every benefits that is free look. Total refund premium = sum of refund premium per free look benefit.
- If the main benefit is terminated under Free Look, calculate premium refund for every benefits that is free look. Total refund premium = sum of refund premium per free look benefit - tolerance amount - total medical fee - total discount premium.

Rules for Increasing SA

This section describes the rules for increasing SA.

Precondition:

- Policy status is Inforce.
- Benefit status is inforce.
- Premium status for this benefit should be regular.
- Should not be a mortgage product, decreasing term product or increasing term product.
- The Benefit should be allowed for increasing SA which is predefined in product definition.

Rules and calculations:

- The selected type of effective date should be allowed for that benefit, as described in the following table:

Table 55 Increasing SA - Types of Effective Date

Type of Effective Date	Benefit with SV Defined in Product	Benefit without SV Defined in Product	Remarks
From Commencement Date	Allowed.	Allowed.	Amount to be collected: difference in premium from benefit commencement date to next due date. Increased SA will take effect from validity date.
Immediately	Not Allowed.	Allowed.	Amount to be collected: difference in premium from validity date to next due date. Increased SA will take effect from validity date.
From Next Due Date	Not Allowed.	Allowed.	Amount to be collected: None. Increased SA will take effect from validity date.

note

If the selected benefit's surrender option = "Trigger SV formula only" or "Trigger unexpired premium or SV formula calculation", the allowed effective type is "Commencement Date" only. If the user selects other effective type (Immediately or Next Due Date), system popups error message.

Rules for Nomination Beneficiary

This section describes the rules for changing beneficiary.

Preconditions:

- For first party policy, it must not be under assignment.
- For third party policy, it must be under absolute assignment and the assignee must be the life assured of the main benefit.

Validation checks when applying changes:

- The system performs the following validation checks. If any check fails, an error message will be displayed.

Table 56 Change Beneficiary - Validation

	Validation
1	There must be at least one information change, that is, either a beneficiary is added, or a beneficiary is deleted, or beneficiary information is changed.
2	The total percentage of all beneficiaries must be 100%.
3	For Trust nomination 49L and Section 73 CLPA, the relationship is mandatory and only allow to select Spouse or Child. For Revocable nomination 49M, the relationship is optional.
4	If Nomination Request Type = Nomination, the Nomination Type, Nomination Date and Nomination Law are mandatory input. System defaults the nomination law as "SG" if the nomination request type = Nomination.
5	System defaults the nomination type and nomination law as blank if the nomination request type is Revocation.
6	System to validate that if there's beneficiary nomination or revocation, there must have valid date in nomination date field.
7	On CS Registration: system to validate that if there is an Section 73 CLPA beneficiary nomination, system to display warning message.

- If all the checks are passed, the system sets the item alteration status to *Completed*.

Rules for Nomination Trustee

This section describes the rules for changing trustee.

1. When adding a trustee:

- If the newly added trustee is an existing customer, the trustee cannot be bankrupt.
- The correspondence address information of the trustee must be entered.

2. When you click **Submit** on the Change Trustee page:

- The system performs the following validation checks. If any check fails, an error message will be displayed.

    - There must be at least one information change, that is, either a trustee is added, or a trustee is deleted, or trustee information is changed. Otherwise, an error message will be displayed.
    - The address record must be selected for the trustee.

- The system keeps the old trustee details, saves and displays modified trustee details.
- The system sets the item alteration status to Completed.

3. Refund Payee will be updated if policy is under trustee:

- If there is a trustee on policy already, system will allocate the premium refund payee as trustee automatically.
- If there are multiple trustees on policy, system will set the latest trustee as the premium refund payee.

Rules for Perform Reduced Paid Up

This section tells the rules for reduced paid-up.

1. When you click **Reduce Paid up:**

- The system performs the following validation checks. If any check fails, the corresponding error message will be displayed.

    - The validity date cannot be greater than Next Premium Due Date or End Date of Grace Period.

- The system performs the following check. If the check fails, a warning message will be displayed. However, you can click **Continue** to proceed.

    - The system checks whether the next premium due date is equal to the anniversary date of the main benefit, and whether there is a Valid RB that needs to be declared on the anniversary date. If the RB has not been declared (i.e., RB due date <= Premium due date) and current System Date is within 5 days of RB Due Date (5 days is hard coded), the system will prompt a warning message. The user can then click **Confirm** to continue the process.

- The system updates benefit information as follows:
    - The system extracts a list of benefits that satisfy the following conditions to perform reduced paid-up:
        - Benefit risk status is Inforce.
        - Benefit premium status is Regular.
        - Benefit allows reduced paid-up as defined in product.
    - The system performs reduced paid-up for the extracted benefits:
        - The system calculates the reduced paid-up SA for the benefits that satisfy the Reduced Paid-up.
        - The calculated reduced paid-up SA of main benefit cannot be less than 0. If yes, the system prompts an error message upon clicking **Perform Reduced Paid-up**.
        - If an embedded rider has no SV benefit but allows Reduced Paid-up, the calculated paid-up SA is same as main benefit's paid-up SA.
        - The calculated paid-up SA can be modified. The revised the paid-up SA can be higher or low than original calculated paid-up SA.
        - If benefit is a SV benefit as defined in product, the system calculates reduced paid-up SA and updates benefit SA.
            - If benefit has excess GSV, excess GSV will be displayed and refunded upfront.
            - If Benefit has no excess GSV, no refund will be generated.
        - If benefit is not a SV benefit as defined in product, the system updates benefit SA using main benefit's paid-up SA.
        - Reduced paid-up SA can be higher or lower than original benefit SA. The system will update benefit SA with reduced paid-up SA value, regardless of whether it is lower or higher.

        - The system sets RB amount to 0, insert negative records to revise the original bonus allocation records and nullifies bonus due date.
        - If the benefit has SB Pay Plan, the nullifies SB pay due date.
        - The system updates premium status to Reduced Paid Up.
        - The system saves SA before paid-up and keeps next due date, paid up date, risk status, premium amount, and so on.
- The system extracts a list of qualified benefits to be cancelled. The benefits to be cancelled must meet the following conditions:
    - Benefit is not terminated.
    - Benefit premium status is Regular.
    - Benefit does not allow reduced paid-up, or benefit allows reduced paid-up and manual SV indicator is N and reduced paid up SA of benefit ≤ 0.
    - The system cancels the benefits extracted. The system updates benefit risk status to Terminate, terminate reason to “Reduced Paid Up”, and termination date to next due date of main benefit.

Calculation rules:

- RPU SA is calculated according to formula set up at product configuration.

RPU value With Loan	**Formula Example**
-	Trunc([Trunc(Factor A + Total Loan/Factor A * Sum Assured * Basic Paid-up factor/1000,2)] + RB payout amount + TB Payout amount,0)
RPU Value	-
Factor A	Trunc(cash value - (RB Payout Amount + TB Payout Amount),2)
Cash Value	Round[(RB paid-up factor for year 2 - RB paid-up factor for year 1* Days /365 + RB paid-up factor for year 1 * [Round(Sum Assured /(1/CV Factor),4],2)
Total Loan	Trunc(Loan Balance + O/S Loan INT,2)

Rules for Reinstatement

This section tells the rules in reinstatement.

1. Rules validations:

- Traditional Policy/Benefit should be lapsed with lapse reason of “Normal Lapse” or “APL Lapse”.
- ILP Policy/Benefit should be lapsed with lapse reason of “ILP Lapse”.
- ILP The main benefit must be within the reinstatement period, which means lapsed date + reinstatement period > validity date.
- System checks whether current age of Life Assured is greater than the max age limit, if it’s greater, then the system prompts a warning message. The current age of life assured is calculated and determined by comparing DOB of LA with CS Validity Date and Age Basis on product.

2. Calculations:

- Normal Reinstate Collection required:
    - Premium from original due date to next due date after CS validity date + interest of premium from each due date to CS validity date.
- APL Reinstatement Full amount calculation, the collected amount contains:
    - APL + interest up to validity date.
    - Premium overdue + premium overdue interest up to validity date.
    - Premium overdue: all premium which next due date <= validity date.
    - Premium due:
        - For non-monthly policy, current installment premium will be included in premium overdue.
        - For monthly policy, one more instalment premium will be taken as premium overdue.

Example:

- *Policy Commencement Date= 2019/02/26; NDD=2020/08/26; Payment Frequency= Half Yearly; Installment Premium= 100,000.00; Lapse Date= 2020/10/06; APL Principle= 11,250.00; Reinstatement Date= 2021/08/03*

a) *Total APL Balance=11,813.44*

Start Date	End Date	Diff Days	Interest	Total Balance
10/6/2020	10/26/2020	20	36.98	-
10/26/2020	11/26/2020	31	57.32	-
11/26/2020	12/26/2020	30	55.47	-
12/26/2020	1/26/2021	31	57.32	-
1/26/2021	2/26/2021*	31	57.32	11514.41
2/26/2021	3/26/2021	28	52.99	-
3/26/2021	4/26/2021	31	58.67	-
4/26/2021	5/26/2021	30	56.78	-
5/26/2021	6/26/2021	31	58.67	-
6/26/2021	7/26/2021	30	56.78	-
7/26/2021	8/3/2021	8	15.14	11813.44

NOTE: 2/26/2021 interest capitalization

b) *Total outstanding premium (including interest) =*

- *Overdue premium on due 26 Aug 2020= 100,000.00-11,250.00=88,750*
- *Overdue premium on due 02 Feb 2021=100,000.00*

NDD	Reinstatement Date	Diff Days	Overdue Installment Premium	Overdue Premium Interest	Total Overdue Premium
8/26/2020	8/3/2021	342	88750.00	5394.42	94144.42
2/26/2021	8/3/2021	158	100000.00	2763.53	102763.53
-	-	-	**Sum:**	**8157.95**	**196907.95**

c) *Total Reinstatement Amount= Total APL balance+ Total outstanding premium=11813.44+196907.95=208721.39*

- ILP reinstatement by Full Amount calculation as below:

    - Full amount = Main Benefit Premium + Cash Rider Premium + Cash Rider Overdue Interest + Policy Loan Value + Repaid surrender value (if any) + Early Encashment Charge (if any).
    - “Main Benefit Premium” refers to the main benefit premium from original FDD to the new FDD. The FDD is based on the validity date of the reinstatement. Recurring single premium will not be included.
    - “Cash Rider Premium” refers to the cash rider premium from lapse date to the next PDD. The PDD is based on the validity date of the reinstatement.
    - “Cash Rider Overdue Interest” refers to the cash rider’s interest from lapse date to the next due date. Next due date is derived based on the validity date of the reinstatement.
    - “Policy Loan Value” is capitalized up to CS validity date.
    - The system calculates the amount of refund of surrender value paid when the policy lapses.
    - System calculates the Early Encashment Charge (if any).
- When perform ILP reinstatement, system validates whether the Premium Holiday Counter >= Max Premium Holiday Period.
    - If yes, system doesn’t refund EEC (Transfer IUA to AUA) which is handled after Premium Holiday exceeded Premium Holiday Aggregation Limit.
    - If no, system refund EEC charge to policy account value after reinstatement.
- System checks if the policy is lapsed during premium holiday period, system to calculate the total premium holiday charge (if any) from PH start date to lapse date and reallocate amount into fund account after reinstatement, and then reduce the aggregated premium holiday months for last premium holiday period.
- System checks if the bonus due date (include Power-up and Loyalty Bonuses) is in lapse period, system to move the bonus due date to next bonus due date after reinstatement. No missed Power-up or Loyalty Bonuses will be given.

- After reinstatement completed, system creates the pending fund transactions for outstanding premium allocation, repaid surrender value allocation, refund charge allocation and overdue monthly charge from last charge due date to next charge due date after reinstatement.
- The repaid surrender value and refund charge need to be reallocated into the source funds and source account type originally deducted. This rule should be applicable for both Cancel Premium Holiday and Reinstatement transactions. But if system cannot capture the source funds and source account type, system will use regular premium apportionment rate to be allocated into regular premium account.

3. Rules to reinstate policy with indexation feature:

- The system calculates the reinstatement amount to be collected as follows:
    - Based on original next due date and new due date after reinstatement date (CS Validity Date) includes existing inforced indexation premium (Inforced indexation period: 1 Year), the system gets a list of overdue premium installment due and payment frequency of each due date.
    - If the reinstatement date is earlier than indexation next due date, the system calculates indexation overdue premium from original due date to new due date after reinstatement or indexation next due date which day is earlier.
    - If the reinstatement date is later than indexation next due date, the system calculates the total overdue premium(including renewal premium and inforced indexation premium) from original due date to premium next due date after reinstatement date. For new segment premium on indexation due date before reinstatement date, the new indexation premium doesn’t need to be included in reinstatement amount.
    - System doesn’t calculate the overdue premium for new indexation before reinstatement date.
    - The system calculates overdue interest from lapse date to CS validity date for all overdue premiums (including indexation premium of each segment) if overdue interest indicator of the product is set to Yes in product setup.

- For waiver benefits, system recalculates the waive SA and waiver premium based on waived product total annual premium accordingly.
- The system updates policy status and indexation status from lapsed to inforced.
- The system updates policy due date and indexation date to new due date after reinstatement.
    - If the original indexation due date is earlier than new due date, system moves the indexation due date to next anniversary date.
    - If the original indexation due date is later than new due date, system doesn't move the indexation due date.
- The system displays the overdue premium breakdown (segment level) and total overdue interest under Collection/Refund Summary section.

Rules for Reversionary Bonus Surrender

This section describes the rules for reversionary bonus surrender.

Precondition:

- Policy status must be inforce.
- Policy has a product with reversionary bonus.
- The accumulated RB > 0.

Rules and Calculation:

- Validation Rules when clicks **Apply Change**:
    - The withdrawal RB surrender value amount can't be greater than calculated Total Gross RB surrender value, if not, system popups error message.
    - The withdrawal RB surrender value must be greater than 0, if not, system pops up an error message.
    - At least one record must be selected, if not, system pops up an error message.
    - The selected benefit is allowed to surrender bonus only as defined in product, if not, system pops up an error message.

- The updated benefit information after change:
    - System reduces reversionary bonus for each selected withdrawal benefit and calculates the revised RB amount by the following formula:
        - *New RB= Original accumulated RB ((Original RB SV- Actual withdraw RB SV)/ Original RB SV)**
        - *Example:*
            - *Original RB= 8,000,000.00; Original RB SV= 4,000,000.00*
            - *Actual withdrawal RB SV= 3,000,000.00*
            - *New RB after withdraw= 8,000,000.00*((4,000,000.00-3,000,000.00)/4,000,000.00) =2,000,000.00*
- RB Gross Surrender Value Calculation:
    - For every benefits in policy that satisfies all the following conditions, then the system will calculate the RB Gross Surrender Value:
        - Benefit status is inforce.
        - Benefit is a SV benefit defined in product.
        - RB GSV formula has been defined in product.
    - RB Gross Surrender Value calculation in RB Surrender:
        - RB Gross SV= Surrender Value of RB+ Surrender Value of IB + Surrender Value of TB.
        - For benefit with premium status= regular or premium waived, system passes valuation date which equal to Next due date(Paid To Date) to RB GSV formula.
        - For benefit with premium status is fully paid, system passes current system date to RB GSV formula.
        - If system cannot determine the RB GSV or other benefits cannot satisfy the above 4 conditions, RB GSV is set to 0.
- RB Net Surrender Value calculation in RB Surrender:

- RB Net SV= RB Gross SV — Mandatory Debts (APL debts+ PL debts- Total Policy Loan Amount).
    - If sum (benefits actual GSV)> mandatory debts, then NSV= sum (benefits SGV)- mandatory debts.
    - If sum (benefits actual GSV) <= mandatory debts, then NSV= 0.
- Mandatory debts= APL Balance + Policy Loan Balance — Total Policy Loan Amount.
    - System date is passed to calculate overdue loan interest for the APL balance and PL balance accounts.
    - Total Policy Loan Amount = total surrender value * Max Percentage of Policy Loan.
- The RB Net SV calculation is just for UI display and reference. The actual RB SV and debts write-off needs to be handled on Payment side.

Rules for Surrender

This section tells the rules in surrender.

Precondition:

- Policy/benefit status should NOT be “Terminate”.
- If you select the main benefit or primary benefits, all the non-terminated secondary benefits will also be selected automatically.

Rules and Calculation:

- The system checks the “Surrender/Termination Basis” option defined on main benefit and perform the surrender calculation based on the following rules:
    - Main Benefit’s Surrender Option= “Trigger SV formula only”:
        - If the main benefit surrender option = “Trigger SV formula only”, the surrender transaction takes effect immediately and calculates the surrender value using formula defined in product. There’s no effective type chosen on Application Entry.

        - If any of riders' surrender option is also "Trigger SV formula only", system calculates the GSV of benefits (SV SA+SV Bonus) using formula defined in product.
        - If any of riders' surrender option is "Trigger Unexpired Premium only", system calculates the unexpired refund premium using formula defined in product.
        - For benefit with premium status= regular or premium waiver, system passes validation date which equal to Next due date to GSV formula.
        - For benefit with premium status is fully paid (i.e., premium status is fully paid or reduced paid up), system passes current system date to GSV formula.
        - If the GSV can't be determined by system, GSV is calculated as 0.
    - Main Benefit's Surrender Option = "Trigger unexpired premium or SV formula calculation":
        - If GSV of main benefit= 0, allow user to select effective type **Immediately** or **From Next Due Date**, system calculates the unexpired premium using formula defined in product.
        - If GSV of main benefit>0, system performs the process based on rule a. above.
- The system updates benefit information as follows:

Table 57 Surrender

Benefit Status	**Terminate Reason**	**Terminate Effective Date**
Terminate	Terminate reason selected by CS user: Surrender /Converted	Application effective date

Rules for Transfer of Coverage

This section describes the rules for transfer of coverage.

Precondition:

- Policy status must be inforce.

- The main benefit's Allow Transfer Coverage= Yes in Product Definition.
- Other party level validation such as FCC validation, same customer validation, etc.

Rules and Calculation:

- Validation Rules when clicks **Apply Change**:
    - "Transfer of Coverage Type": a display field and is not editable.
    - There are two display items: one is "Maintain Premium Amount", which currently shows only for specific products (hardcode), indicating that if there is no change in the premium amount, no fees will be collected or refunded; the other is "Maintain Sum Assured", which is displayed for all products except for specific ones, indicating that if there is a change in the premium amount, the normal collection or refund of fees will occur.
    - The new life assured must be a different individual person from original life assured, if not, system pops up an error message to inform user.
    - System transfers the all benefits of original life assured to new life assured (including all riders attached on the original life assured):
        - If Premium Calculation Method of benefit (count way) = Agreed Premium, the sum assured and premium will remain the same as before the coverage transfer.
        - If Premium Calculation Method of benefit (count way) <> Agreed Premium, system recalculates the premium or sum assured based on calculation method and new life assured's premium rate and the new premium takes effect immediately.
    - System validates if policy has nomination beneficiary, trustee or assignee (PH<>assignee) before transferring coverage, if yes, system popups error message to block the change.
- Calculation of Collection or Refund:
    - If the Transfer of Coverage Type is "Maintain Sum Assured" and the new premium is more than original premium, the difference in premium from Validity Date to Next Due Date will be collected.

        - If the Transfer of Coverage Type is “Maintain Premium Amount” and the new premium is more than original premium, system only calculates the new installment premium, but no collection premium will be calculated.
        - If the new premium is less than or equal to original premium, no refund will be given.
- Upon CS inforce, system will update below:
    - System saves the new life assured’s details and records the validity date as the start date of the new life assured and end date of the old life assured. The old life assured’s details also saved as history record.
    - System updates the benefit risk commencement date as new life assured start date.

Rules for Underwriting Review

This section describes the rules for underwriting review.

1. When you add a comment at PS application entry comment section, it will be routed to underwriting workbench. Underwriter will be able to view the PS comment history in underwriting workbench.
2. In the CS underwriting:

- Underwriter can make the underwriting decision= Conditionally Accepted, then modify exclusion information:
    - System should retrieve the existing exclusion records information on policy.
    - Underwriter can modify the existing exclusion records information such as Exclusion Code, Start Date, End Date, Comments, etc.
    - Underwriter can add the new exclusion record on product.
    - The end date can’t be earlier than start date.
    - Add a new exclusion query function under Underwriting module, system always show the latest exclusion information on query UI.
- Underwriter also can modify extra premium information on product:

- System checks if the Underwriting Type is CS Underwriting and underwriting decision is conditionally accepted on benefit, then display change extract premium from effective type options (Immediately/Commencement Date/Next Due Date) under benefit level.
- If selected conditional types is extra loading (Health Loading/Occupation Loading/Avocation Loading/Residential Loading/ Other Loading), when click **Add** for new extra loading or click **Edit** or **Delete** for existing loading, the effective type should be mandatory required and default the selection as Next Due Date but allow to change. The effective type is on benefit and extra premium level. All the extra loadings under the same benefit should follow the same effective type.
- Once underwriter submits the changes of extra loading, the effective type is applied on benefit and don't allow to change the effective type and validity date. All new loading changes for the same benefit should follow the same effective type and validity date. Users can click **Clear UW Changes** to clear the changes and reset the UW data if there are any wrong entries.
- For other conditional types (Exclusion/Endorsement/Conditions/etc.) or no extra premium modification, the effective type cannot be selected.

- Change Extra Premium from effective types logic:
  - Change Extra Premium from Immediately, system popups the validate date filed and defaults the date as system date, allow user to change. On Extra Loading entry page, if it's a new extra loading added, loading start date will be defaulted as commencement date of benefit and read only, loading end date will be defaulted as Premium End Date and allow to edit. The revised extra premium takes effect immediately.
  - Change Extra Premium from Commencement date, there's no validity date filed popped up. On Extra Loading entry page, if it's a new extra loading added, loading start date will be defaulted as commencement date of benefit and read only, loading end date will be defaulted as Premium End Date and allow to edit. The revised extra premium takes effect from commencement date.

    - Change Extract Premium from Next Due Date, there's no validity date field popped up. On Extra Loading entry page, if it's a new extra loading added, the loading start date will be defaulted as next premium due date and read only, the loading end date will be defaulted as Premium End Date and allow to edit. The revised extra premium takes effect from next premium due date.
    - For ILP and Unit-Deduction Rider, only allow to choose the effective type from Next Due Date. On Extra Loading entry page, the loading start date will be defaulted as next monthlyversary date (Monthly Charge Due Date) and read only for new loading, the loading end date will be defaulted as Coverage End Date and allow to edit. The revised extra premium takes effect on the next monthly charge due date.
    - For existing extra loading records, no matter which effective type is chosen, the defaulted start date and end date should follow existing start date and end date and only allow to edit end date. Start date should be always read only.
    - For non-investment linked product, the end date must be a due date - 1 day except for special value 09/09/9999(Whole life policy). For investment linked product, the end date must be monthlyversary date - 1 day except for special value 09/09/9999(Whole life policy). If underwriter inputs wrong date, system pops up an error message.
- For waiver benefits, collection/refund is calculated if there is a change in extra premium on the waiver itself or if the waiver is attached to the benefit where extra premium is changed. For waivers that are attached to the changed benefit, the effective type (change from commencement date or immediately) will follow that waived benefit of the changed.
- If there is a change in extra premium on the waiver itself and this waiver is also attached to the waived benefit where extra premium is change, the effective type of this waiver will always follow that of the waived benefit if the two effective types are different.
- System updates the revised extra premium and WOP premium on UW Benefit Info section.
- For CS Underwriting, underwriter needs to provide the underwriting decisions for whole policy or all benefits on policy. Like Add Rider, underwriter should provide the decision both original benefits (main and

rider) and new rider. If the Underwriting Decision is declined or postponed or restrict cover, the decision cannot be applied to benefit. System will push the case to UW confirmation, then PS user can modify the CS entry or reject the application.

3. Extra premium calculation rules at CS underwriting:

- For non-investment linked product, if the revised extra premium takes effect from commencement date or immediately, system calculates the prorated collection and refund premium from commencement date or validity date.
- If the new premium is more than original premium, the total collection includes the following:
    - Module premium difference between current new premium and current original premium.
    - If effective type is from Commencement Date, the total premium difference from commencement date to next due date should be collected.
    - If effective type is from immediately, the prorated premium difference from validity date to next due date should be collected; Calculation Formula= N*P/D.
        - N: the actual numbers of days from validity date to next due date of the product.
        - P: one instalment of module premium difference.
        - D: the number of days for pay mode (Monthly:30; Quarterly:91; Half Yearly:183; Yearly:365).
        - If effective type is from next due date, no collection premium calculated.
- If the new premium is less than original premium, the total refund includes the following:
    - Module premium difference between current new premium and current original premium.
    - If effective type is from Commencement Date, the total premium difference from commencement date to next due date should be refunded.

    - If effective type is from immediately, the prorated premium difference from validity date to next due date should be refunded; Calculation Formula= N*P/D.
        - N: the actual numbers of days from validity date to next due date of the product.
        - P: one instalment of module premium difference.
        - D: the number of days for pay mode (Monthly:30; Quarterly:91; Half Yearly:183; Yearly:365).
    - If effective type is from next due date, no refund premium calculated.
- For investment linked product and unit-deduction rider, the extra premium change takes effective from next monthlyversary date without collection or refund.
- After underwriter submitted underwriting, the PS user can confirm the underwriting in CS- Data Entry pool. User could query underwriting information and the collection/refund summary on underwriting confirmation screen and submit the CS UW Confirmation or Approval, the system sets the application status to be completed/approved or inforced.
- For all CS applications with extra premium changes, system doesn't allow to delete/reset or reject the alteration item on UW Confirmation stage, but allow to cancel or reject the whole application. Once the application is cancelled or rejected, the new extra premium or exclusion will not take effect.

4. Rule for surrender of a policy with indexation feature:

- For the policy with indexation indicator= Yes and without cash value, allow to surrender the policy from next due date or immediately (POS: Surrender).
    - If the policy is terminated from next due date, the system updates all indexation segments status to be Terminated and cancel all pending billing records for all segment premium. The terminate date of segments is same as benefit's termination date.
    - If the policy is terminated immediately, the system calculates prorated refund premium from CS validity date until next due date (use total model premium including basic premium and indexation premium). The terminate date of segments is same as benefit's termination date.

- For the policy with indexation indicator= Yes and with cash value, system calculates the surrender value based on surrender value formula.

Rules for Product with GCV

For product with GCV, system will apply below rules in allowed effective types and calculation:

Transaction Type	**Product Setup(Main plan or rider)**		
Surrender Option	Trigger SV Formula Only	Trigger Unexpired Premium Only	Trigger unexpired premium or SV formula calculation
Surrender	“Immediately”	“Immediately” or “From Next Due Date”	SV>0: ‘Immediately’
-	-	-	SV=0: “Immediately” or “From Next Due Date”
Delete rider	“Immediately” (otherwise error message)	All eff. date options available	SV>0: “Immediately”
-	-	-	SV=0: All eff. date options available
Decrease SA/Partial Surrender	“Immediately” (otherwise error message)	All eff. date options available	SV>0: ‘Immediately’ (otherwise error message)
-	-	-	SV=0: All eff. date options available
Increase SA	“Commencement Date”	All eff. date options available	N.A: “Commencement Date”

Rules for Indexation Premium calculation

This section describes rules for indexation premium calculation at Change DOB and Gender/Change Smoker Status/Change Occupation.

- For the policy with indexation, once the indexation premium recalculated and changes take effect from commencement date or immediately, system needs to calculate the refund/collection premium based on different premium amount between new indexation premium and original indexation premium amount for all segments.
    - For Change of DOB, the system recalculates and updates the entry age of each segment based on segment entry age and calculate the new segment premium.
    - For other premium related information changes (Occupation/Smoker Status/Gender), the system updates the data on policy level and retrieves the new premium rate to recalculate the new segment premium.
    - If new segment premium > original segment premium, the system calculates the prorated collection premium from CS validity date/Commencement date to next premium due date and accumulate the overdue premium interest of each modal indexation premium difference.
    - If new segment premium = original segment premium, there's no collection or refund.
    - If new segment premium < original segment premium, the system calculates the prorated refund premium from CS validity date/Commencement date to next premium due date.
    - The premium difference is calculated using new segment premium minus the original segment premium over each installment from actual validity date till due date.
    - The interest is calculated only when new segment premium > original segment premium from each segment premium due date until CS validity date or system date.
- For the policy with indexation, underwriter can make the decision as substandard accepted and apply the extra loading premium on indexation benefit.
    - If the extra premium is added in New Business, the system calculates the initial extra premium based on basic premium (initial segment premium).

- If the extra premium type= Manual Extra Premium, the extra premium is applied to initial segment premium only. For indexation segment SA, system won't calculate the extra premium for indexation renew premium.
- If the extra premium type= $ per 1,000 Sum Assured, the system calculates the proportional based on indexation sum assured. The indexation extra premium must be billed together with the renewal premium in the renewal cycle. If there is a premium discount at the inception of the policy, revised extra premiums due to Indexation option activation in the subsequent policy year will also have the same discount.
- For other extra loading types, system doesn't allow to add for indexation product. System popups an error message to block the process.
- The system records the extra premium on indexation segment level and updates the total extra premium on policy premium information.
- Indexation extra premium calculation follows the initial extra premium type, start date and end date. Once the initial extra premium is terminated, the indexation extra premium will be end at the same due date accordingly.

Example:Policy Basic SA=100,000, Extra Premium Type= 2$ per 1,000 Sum Assured, Indexation Rate=5%

Segment ID	Entry Age	Sum Assured	Premium Amount	Extra Premium	Segment Type
001	30	100,000	5,000	200	Initial Segment
002	31	5,000	250	10	Indexation Segment

- For indexation policy with premium campaign flag, the revised premiums due to indexation option activation in the subsequent policy year will also have the same campaign discount. The system calculates the campaign amount based on segment premium.
- For any transactions affect the segment premium calculation, the system needs to revise the campaign discount amount on segment level.

- The following transactions might affect the campaign calculation:
    - Premium Renewal
    - Add/Delete Rider
    - Reinstatement
    - Increase/Decrease SA
    - Change DOB and Gender/Occupation/Smoker Status
    - Surrender/Cancellation
    - Free Look
    - Reinstatement
    - Change Payment Frequency

Rules for CS Item Overdue Interest Calculation

- When the CS is not normal Reinstatement, for both overdue premium and entire installments premium, system will calculate interest from **CS Validity Date** to **Premium Due Date** if days between the two date are greater than 30 days (Grace period).
- When the CS is Normal Reinstatement:
    - For the first installment premium, system will calculate interest from **CS Validity Date** to **Premium Due Date** if days between the two date are greater than 45 days (Grace period + Additional Grace Period).
    - For the secondary and subsequent installment premium, system will calculate interest from **CS Validity Date** to **Premium Due Date** if days between the two date are greater than 30 days (Grace period).
- When the CS is APL Reinstatement, for the overdue premium after Pro-rated APL, system will calculate interest from **CS Validity Date** to **Premium Due Date** if days between the two date are greater than 45 days (Grace period + Additional Grace Period).

Rules for CS Workflow

In CS workflow configuration, user can define if each step is optional or mandatory.

- Once the alteration configured NeedUW as optional, when the user submits the application entry, system to display a warming message.
    - If the users click **Yes** on warning message, system sends the application to UW pool automatically. The application status changes to Waiting for Underwriting or Waiting for Approval.
    - If the user click **No** on warning message, system will skip the underwriting for this application and go to the next process workflow depend on service rule configuration.
- Once the alteration configured NeedUWConfirm as optional, when the user submit the underwriting, system to display a warming message.
    - If the user clicks **Yes** on warning message, system sends the application to UW Confirmation pool automatically. The application status changes to Waiting for Underwriting or Waiting for Approval.
    - If the user clicks **No** on warning message, system will skip the underwriting confirmation for this application and go to the next process workflow depend on service rule configuration.
- Once the alteration configured NeedApprove as optional, when user submits the application entry or underwriting or underwriting confirmation, system to display a warming message.
    - If the user clicks **Yes** on warning message, system sends the application to Approval pool automatically. The application status changes to Waiting for Approval.
    - If the user clicks **No** on warning message, system will skip the approval for this application and change the status to approved or inforced.
- If the application has at least one alteration item (not include rejected item) needs manual underwriting or approval, the whole application need underwriting or approval and no warning message populated.

note

The application can go to underwriting Confirmation only after underwriting finished. System can’t skip underwriting process directly into underwriting confirmation pool.

Rules for Underwriting Decision Disposal

After manual Underwriting completed, system will check the pre-defined auto UW confirmation rule:

- If auto UW confirmation rules validation pass, CS application no need manual UW confirmation;
- If auto UW confirmation rules validation fail, CS application will go to manual UW confirmation.

This section tells the rules in manual underwriting decision disposal.

1. When you want to adjust alteration items:
    - You can re-submit the application for underwriting.
2. When you click **Confirm** on the Underwriting Decision Disposal page:
    - The system updates the application status to Pending Approval, Approved or Inforce depends on workflow setting and fee offset result or sufficient money in suspense.
    - If the application status is Approved and there is payment to be collected or refunded, the system offsets fee records automatically, and displays the payment/collection information before and after the Fee Record Offset process.

Rules for Customer Service Approval

After Data Entry or manual Underwriting completed or Underwriting Decision Disposal confirmed, system will check the pre-defined auto approval rules:

- If auto approval rules validation pass, CS application no need manual approval;
- If auto approval rules validation fail, CS application will go to manual approval.

This section tells the rules in application approval.

1. When you select a target application No.:
    - If the application status is Pending Approve:

        - After you enter the Application Approve page, the application status changes to Approving and this case is locked by the current user.
    - If the application status is Approving:
        - Before you finish the case, that means before you approve, if go back to application entry the application status is Back Entry, or reject the application the application status is Rejected.

2. When you click **Approve**:
    - The system checks for collection or refund.
        - If the application does not have collection or refund, the application status will become Inforce.
        - If the application has refund, the application will become Inforce and the payment/collection information page will be displayed.
        - If the application has collection, the application will become Approved and the payment/collection information page will be displayed.
    - If there is collection or refund, system offsets fee records automatically.
    - System displays the payment/collection information before and after the fee record offset process.

Rules for Customer Service Inforce

1. Alteration commencement date and alteration risk commencement date.
    - Alteration commencement date is the date that is used to calculate the policy value, age at inception, premium, etc.
    - Alteration risk commencement date is the date that is used to determine when the risk coverage starts for the benefit alteration.
2. Tolerance Limit for CS:
    - Add an “Application Type” (value=“3”) to the Tolerance Limit Rate table to define the tolerance limit for CS Collection, the same as for NB & Renew.

- PS tolerance limit is a global level parameter. The value is based on base currency (Dollar(Singapore)).
- For PS transactions with transaction status as Approved or Completed:
    - System exchanges tolerance limit from base currency to policy currency by fixed exchange rate.
    - System checks if total PS premium > collection amount >= total PS premium — tolerance limit in policy currency.
        - If yes, system applies PS premium with tolerance limit in policy currency, and then the PS Application takes effect.
        - If no, system leaves suspense and not apply PS premium.
- After PS inforced, system creates payment records with payment method= Insurer Payment and fee amount is tolerance amount (PS Premium- Suspense Amount).
- PS tolerance limit is applied for the following existing PS items and all new feature PS transactions which need collection:
    - Add Rider
    - Change Benefits
    - Change Birth Date and Gender
    - Change Extra Premium
    - Change Occupation
    - Change Smoker Status
    - Change Term
    - ILP Ad-hoc Single Premium Top-Up
    - Reinstatement
    - etc.

Rules for Customer Service Application Rejection

This section tells the rules of application rejection.

1. When you click **Submit** to confirm the rejection,
    - The application status is changed to *Rejected* and all alteration items in this application are updated to *Rejected*.
    - The system unfreezes the policy of this application.

Rules for Online Application Cancellation

This section tells the rules for cancelling application online.

1. When you click **Submit** to confirm the application cancellation,
    - The system saves the information and updates application status to *Cancelled*.
    - If payment/collection offset has been performed, the system undoes the payment/collection record generation for this application. If there is offset against any suspense account, the amount will go back to general suspense (either cash or CPF suspense accordingly).
    - The system unfreezes the policy of this application.

Rules for Alteration Reverse

This section tells the rules for reversing alteration. When you search out the target transaction record:

- If the alteration items have used collection amount, user will only be able to select CS undo reason = Cancellation of Application, Human Error, or Customer Request. Dishonored cheque and Incorrect Amount should be done by BCP user and triggered via Cancel Collection.
- The following transaction records will be disabled:
    - Policy turn inforce transaction
    - Transactions which have been undone
    - Transactions in the undo skip list, including:
        - Change payment method
        - Nomination Beneficiary
        - Nomination trustee

        - Change assignment
        - Change policyholder
- If there is any claim with status not equal to Canceled or Rejected, the system displays an error message for user to follow up and disables all transactions.

When you select a transaction and click **Reverse** Transaction:

- All the transactions after the selected transaction will be selected automatically.

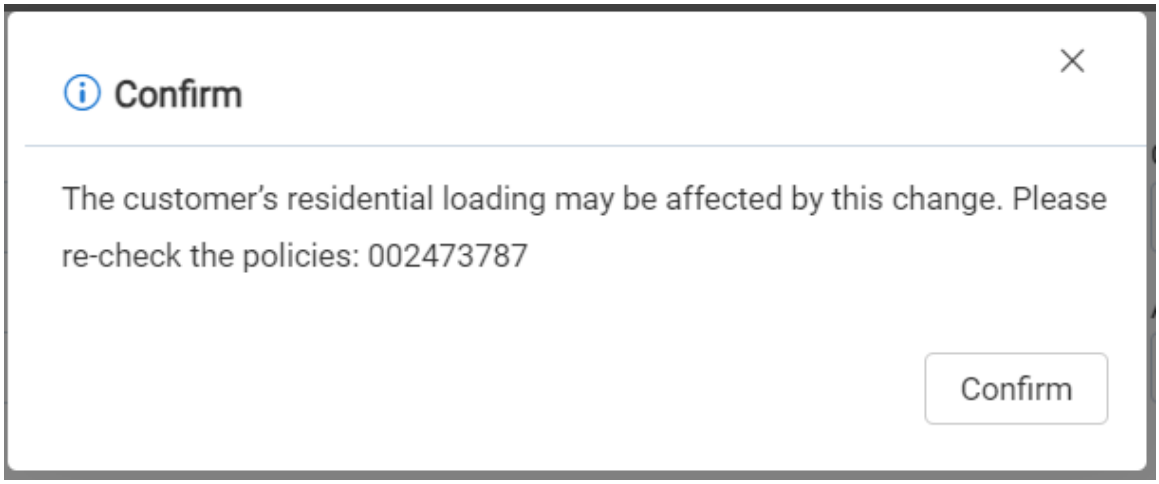

Rules for Maintain Customer

This section tells the rules at Maintain Customer.

- Name format for individual customer
    - If select **O-Other Name**, the name sequence will be Given Name + Surname.

For Example:

- Name Format is O-Other Name, Given Name is Michael, Surname is Smith, then the display name will be Michael Smith.
- Address Change for individual customer
    1. When the country/territory of customer's VALID residential address is changed, or a new VALID residential address is added for him via maintain customer, new business or CS item, system needs to find out the policies meeting conditions below simultaneously:
        - Covering the same customer as an insured, if he is a policyholder only in a policy and he is covered by a waiver, he is also treated as an insured;
        - With inforce status.
    2. Then system pops up a warning message after the change is saved. The warning message is *"The customer's residential loading may be affected by this change. Please re-check the policies: Policy number1, Policy number 2..."*.

- Letter trigger point for individual customer
    1. The "Letter Trigger" indicator will be dynamically set as **Yes** if user modify any of below information for individual customer, and the indicator can be editable to **No** by user manually.
        - Given Name
        - Surname
        - Alias Name
        - Other Name
        - Gender
        - DOB
        - Nationality (1,2,3,4,5)
        - Mobile No.
        - Office No.
        - Home No.
        - Email
        - ID Number
        - Occupation
        - Address Information (Country, Address1,2,3,4, postal code)
        - Preferred Communication Mode

NOTE:

1. For all letters, system need to record the “Address Status” Indicator to suppress printing of hardcopy letters;
2. If the “Address Status” is set to **Undelivered** or **Invalid**, the system should disable the address information by graying it out. Once the “Address Status” is updated to **Valid**, the system will allow users to edit the address information;
3. If the user allocates the **Undelivered** or **Invalid** address to policy in NBU/PS/Maintain Customer, system will display a warning message.
4. For other information modification which is not mentioned above, the indicator will default as **No**.
5. The letter will be triggered successfully upon click **Generate Letter** only when the “Letter Trigger” is **Yes** and there is letter template mapped with current modification.

For Example:

1. When the user changes Given Name only, system will set “Letter Trigger” as **Yes** which will trigger letter generation if there is template mapped with such modification, and the user is able to change as **No** if no need to trigger letter.
2. When the user changes Marital Status only, system will set “Letter Trigger” as **No** which will not trigger letter generation, and there will no letter generation even though user may change the indicator to **Yes** by accident since there is no template mapped with such modification.
3. When the user changes Given Name and Marital Status at once, system will set “Letter Trigger” as **Yes** which will trigger generation for given name modification only since there is no template mapped for marital status change, and user is able to change as **No** if no need to trigger letter.

- Letter trigger point for company customer
    1. The “Letter Trigger” indicator will be dynamically set as **Yes** if users modify any of below information for company customer, and the indicator can be editable to **No** by users manually.
        - Company Name

        - Address Information (Country, Address1,2,3,4, postal code)

    2. For other information modification which is not mentioned in point 2, the indicator will default as **No**.

The letter will be triggered successfully upon click **Generate Letter** only when the "Letter Trigger" is **Yes** and there is letter template mapped with current modification.

For Example:

- When the user changes Company Name only, system will set "Letter Trigger" as **Yes** which will trigger letter generation if there is template mapped with such modification, and user is able to change as **No** if no need to trigger letter.
- When the user changes Company Email Address only, system will set "Letter Trigger" as **No** which will not trigger letter generation, and there will no letter generation even though user may change the indicator to **Yes** by accident since there is no template mapped with such modification.
- When user changes Company Name and Company Email Address at once, system will set "Letter Trigger" as **Yes** which will trigger generation for given name modification only since there is no template mapped for company email address change, and user is able to change as **No** if no need to trigger letter.
- Citizenship check for Shield products

    1. In maintain party---individual customer, after changing the value of "nationality" or "ID type" (citizenship is auto derived from these 2 fields) and clicking **Submit**:

    2. Extract all the policies that:

        - Contain at least one Shield plan with plan status as "inforce".
        - The current customer is the insured or policyholder of this Shield plan.
          Prompt a warning message after *Shield eligibility check: please terminate PN <policy number 1> (), PN <policy number 2> ()* ...

note

This check is only applicable for Singapore market.

- Same party rule

    1. Check the same individual customer by ID Type, ID No. and Nationality, system identify they are duplicate person if the three information are the same. For the person with multiple nationality, will consider duplication as long as one of the nationality is matched.
    2. System will pop up error message and block the process when 3 key information (ID Type, ID Number and Nationality) has been input if the data is matched with any existing party in system, for new customer creation.
    3. System will pop up error message and block the process when click **Submit** for customer basic information(nationality) and Identifier information (ID Type and ID No.) modification.

Rule for Policy Servicing Quotation

This section describes the rules for Policy Servicing Quotation.

1. If the Quotation Type is selected to **Reinstatement Quotation**:
    - When the user clicks **Search**, system performs the following validations:
        - The policy no. must be existed in system, if not, system pops up an error message;
        - The policy status of searched policy must be lapsed, if not, system pops up an error message.
        - System checks whether current age of Life Assured is greater than the max age limit, if it's greater, then the system prompts a warning message. The current age of life assured is calculated and determined by comparing DOB of LA with CS Validity Date and Age Basis on product.
    - When user clicks **Calculate**, system performs the following validations:
        - If Validity Date input by user is beyond the max reinstatement period defined in main benefit, system popups warning message.

- After clicks **Calculate**, system enables the reaming sections and uses the Validity Date entered by users to calculate the following items for reinstatement and display the value on each section:
    - **Overdue Premium:** From current Premium Due Date to NDD after Validity Date for the lapsed policy mines APL principle if any;
        - For monthly payment policy, one more installment premium will be taken as premium overdue.
        - For riders, only includes cash riders' premium.
    - **Overdue Interest:** From Installment Due Date to Validity Date for each premium due which is over the Grace Period (Including additional grace period) for the lapsed policy;
    - **Policy Loan/ APL Balance Amount:** The lasted PL/APL (including loan interest up to Validity Date if any;
    - **Surrender Value:** The surrendered account value when ILP policy was lapsed.
    - **Total Reinstatement Amount:**
        - For Normal reinstatement, total reinstatement amount is equal to Sum of Total overdue premium plus overdue interest.
        - For APL reinstatement, total reinstatement amount is equal to sum of total overdue premium plus overdue interest and total APL balance if any.
        - For ILP reinstatement, total reinstatement amount is equal to sum of total overdue premium plus interest + repaid surrender value if any.

note

The reinstatement quotation is applicable for whole policy lapse only. And it does not support RPU: Reduce Paid Up/ ETI: External Term Insurance reinstatement in current function.
